1. Although international trade has benefited UK consumers greatly over the last century, improvements in transport mean it is becoming more difficult for UK firms to compete against low-cost foreign producers.

Explain why international trade has benefited UK consumers.

[15 marks]

2. Although international trade has benefited UK consumers greatly over the last century, improvements in transport mean it is becoming more difficult for UK firms to compete against low-cost foreign producers.

Discuss the view that protectionist policies should be introduced to protect UK firms.

[25 marks]

3. In May 2014, the European Central Bank (ECB) President, Mario Draghi, warned that there was a risk of deflation across economies in Europe.

Explain why deflation may occur in an economy.

[15 marks]

4. **The Balance of Payments**

Extract F: Warning on UK's current account deficit

The UK is one of only eight countries to see its current account deficit increase since 2008, and its deficit has increased the most. Should overseas investors be worried? The UK has lived with large current account deficits for decades. From the 1940s to the early 1970s, when the country was operating a fixed exchange rate system, the UK was forced to use contractionary policies to keep the balance of payments in check and had to devalue the pound sterling in 1949 and 1967. From the 1980s onward, with the exchange rate floating, persistent current account deficits stopped being a cause for concern.

In the boom years before the global financial crisis, the current account deficit remained large, exceeding 3% of GDP in 2006. With hindsight, this should have rung alarm bells that the economy had become seriously unbalanced, with foreign money flowing into the UK to fund unsustainable public and private sector consumption rather than investment. After the crash, it was widely assumed that the UK economy would recover through higher exports and higher business investment. Indeed, the government's 2010 budget forecasted a current account surplus of 0.9% in 2013, driven by a surge in exports. This forecast proved highly inaccurate as the current account deficit increased.

Although surveys show that business confidence is high, investment fell in the year to the end of September 2013, and the UK's export performance has been poor, despite the depreciation of sterling by approximately 25% in the immediate aftermath of the financial crisis. In contrast, other European economies have seen strong export growth.

The UK's large current account deficit cannot be ignored easily, and research shows that such deficits are reduced eventually through some combination of slower growth and currency depreciation.

5. THE GLOBAL CONTEXT

Extract B: Will growing inequality damage the US economy?

Some economists are predicting that the US will play a leading role in driving world economic growth and, as the country which is the UK's main export partner, this may provide an injection into the UK's circular flow of income. However, since the 2008 financial crash, there has been debate in the US over whether or not economic growth can be strengthened and, if so, how best to achieve this. Within this debate, there are growing concerns about the specific issue of income inequality. The top 1% of earners have received 95% of the increase in income since the financial crisis. Since 2009, the top 1% have seen their incomes rise on average by 31.4%, whereas the rest of the population has seen a rise of only 0.4%.

The economist, Joseph Stiglitz, has highlighted inequality as one of the prime reasons why the US has continued to struggle to recover. His basic argument is that the rich have a lower marginal propensity to consume (the proportion of any increase in income spent) and a higher marginal propensity to save (the proportion of any increase in income not spent) than the poor.

Such inequality also creates unsustainable 'property-price bubbles' as wealthy individuals increase the demand for property to let out on the rental market which further fuels inflation. Tax receipts, which could be injected into the economy, also end up being reduced, as the rich are able to exploit loopholes to avoid payment of tax. For this reason, Stiglitz argues that it is necessary for the US Government to intervene to deal with inequality. If the incomes of the poor were raised, increased consumption would occur. This argument is refuted by Paul Krugman, who states that there are some European economies with much lower income inequality which are also in a mess.

6.

THE GLOBAL CONTEXT

Extract C: Incentives and economic performance

Could inequality be adversely affecting economic performance? According to some economists, capitalism is not working effectively. Reducing trade union power and creating more flexible labour markets have created greater income inequality. Successive governments have also reduced taxation on companies and high earners (such as the cut in income tax for those earning over £150 000 from 50% to 45%) in order to promote incentives and wealth generation, as well as focusing much of the UK's hopes on the financial services industry. These policies, however, have created greater divides in terms of the 'haves' and 'have nots' which may have consequences for the UK's macroeconomic performance.

There has been a shift, over the last generation, in the share of GDP from the workforce to shareholders of between 5% −7%, with many low earners finding it difficult to get onto the property ladder. Neo-classical economists cite the trickle-down effect as a way of improving the living standards of all by cutting taxes for upper income groups and business, stating that economic progress depends on saving and innovation which, in turn, depends on the ability to make high profits. However, research by the Tax Justice Network claims that, when there are high levels of inequality, to avoid tax, financial capital often leaves the country, rather than staying in the domestic economy.

It has been argued that other policies such as public sector pay rise limits of 1%, benefits rising at 1% rather than inflation-linked increases, and the removal of some housing benefit, as well as the culture of bankers' bonuses, have all contributed to growing inequality. This is likely to have consequences for consumer spending power, but may also help to contribute to reduced inflationary expectations. There has also been criticism of the UK banking system, in that it has been too focused on making quick financial returns rather than long-run investment. Ultimately, these factors may damage the UK's ability to achieve its macroeconomic targets.

7.

In May 2014, the European Central Bank (ECB) President, Mario Draghi, warned that there was a risk of deflation across economies in Europe.

Evaluate the view that the UK government should give higher priority to preventing deflation rather than controlling inflation.

[25 marks]

8.

The Balance of Payments Extract F (lines 21−22) states: 'The UK's large current account deficit cannot be ignored easily, and research shows that such deficits are reduced eventually through some combination of slower growth and currency depreciation'.

Using the data in the extracts and your knowledge of economics, evaluate the significance of a large and persistent deficit on the current account of the balance of payments for the UK economy.

[25 marks]

STEMUP.CO.UK

9. In 2014, the UK's contributions to the European Union (EU) budget rose by £2.7bn, making it the second largest net contributor. However, it is argued that the UK benefits much more from the trade and the job creation that EU membership brings.

Evaluate the extent to which individuals and firms in the UK benefit from membership of the EU.

[25 marks]

10. **International trade Extract C** (lines 10−11) suggests that 'Increased protectionism could be damaging as the UK is placing much of its hopes for export success on the growing Chinese market.'

Using the data in the extracts and your economic knowledge, evaluate the view that the use of protectionism is inevitably damaging to economies.

[25 marks]

11. **International trade**

Extract C: China and Europe risk trade war

China this week responded to EU anti-dumping tariffs on solar panels with a levy on European wine. However, by attacking wine producers, Beijing has potentially turned a straightforward dispute over state subsidies between Germany and China into a full-blown European trade war.

France has effectively been targeted in retaliation for a levy designed to protect German manufacturers in what appears to be a deliberate attempt to increase tensions within the EU. In doing so, experts said that China, which is relatively new to the politics of global trade, has demonstrated smart tactics.

The danger is that China may decide to target other seemingly innocent parties if the row escalates, and that might mean the UK. Increased protectionism could be damaging as the UK is placing much of its hope for export success on the growing Chinese market.

In the last five years, UK goods exports to China have virtually doubled to £15.9bn and, three years ago, David Cameron set a $30bn (£20bn) target by 2015 as part of a bilateral deal with Beijing. Including Hong Kong, China is now the UK's fifth largest net trading partner.

However, China's influence in the UK stretches wider. At the end of 2011, foreign direct investment into the UK from China totalled £1.3bn, the second largest in the EU after Germany. In the last six months alone, China's telecoms giant Huawei has announced plans to invest £1.3bn in a new plant while ABP (a large Chinese investment group), plans to spend £1bn developing the Royal Albert Dock in London.

The Government also hopes to attract Chinese money to invest in UK infrastructure as part of George Osborne's 'Plan for Growth'. In other words, China is a key part of the Government's economic recovery plan.

Source: ©Telegraph Media Group Ltd 2013

12. After a period of inflation below the target rate, the Consumer Price Index (CPI) inflation rate was recorded as −0.1% in early 2015. The Governor of the Bank of England wrote: 'A temporary period of falling prices, driven by large adjustments in a few specific components of the CPI, is a fundamentally distinct phenomenon from 'deflation'...The UK is not experiencing 'deflation'.'

Evaluate the possible consequences for the performance of the UK economy of the actual rate of inflation being below the Monetary Policy Committee's (MPC's) target rate.

[25 marks]

13. In 2014, the UK's contributions to the European Union (EU) budget rose by £2.7bn, making it the second largest net contributor. However, it is argued that the UK benefits much more from the trade and the job creation that EU membership brings.

Explain how membership of a customs union, such as the EU, affects the pattern and volume of trade between countries.

[15 marks]

14. Between 2014 and 2018, the pound fell by more than 20% against the dollar and euro. Some argued that this would benefit the UK's macroeconomic performance, but others claimed that a lower exchange rate will cause problems.

Assess the view that a depreciation of the pound against other currencies is likely to improve the UK's macroeconomic performance.

[25 marks]

15. Explain the phrase 'devaluation of the exchange rate' (**Extract B**, line 12) **and**, with the help of a diagram, analyse how a devaluation of the Chinese currency (the yuan) may affect economic growth in the UK.

[9 marks]

16. In January 2009, £1 could buy approximately 1.04 euros on the foreign exchange market. By July 2015, £1 could buy approximately 1.44 euros.

Evaluate the impact on the UK's macroeconomic performance of a sustained rise in the value of the pound sterling against the euro.

[25 marks]

17. **Extract F** (line 21) asks: 'Why are productivity rates in other economies important for the UK?'

Using the data and your knowledge of economics, evaluate the significance of productivity improvements in the UK **and** in other EU economies for the performance of the UK economy.

[25 marks]

18. Explain the term 'foreign direct investment' (**Extract E**, line 7) **and**, with the help of a diagram, analyse how foreign direct investment **and** improvements to infrastructure may boost productivity.

[9 marks]

19. **Extract C** (lines 21 – 22) states: 'Any kind of deal between the EU and ASEAN economies is still a long way off, and the UK must wait to see how new trade deals affect its macroeconomic performance.'

Using the data and your knowledge of economics, evaluate the extent to which international agreements to increase free trade are likely to be beneficial to the UK's macroeconomic performance.

[25 marks]

20. Explain the term 'comparative advantage' (**Extract B**, line 17) **and**, with the help of a diagram, analyse **two** causes of increased globalisation in the world.

[9 marks]

21. The UK has seen significant changes in its pattern of trade with the rest of the world in terms of what we trade and with whom. The UK's current account deficit widened from £29.1bn in 2011 to £100.2bn in 2015. The deficit in 2015 was 5.4% of GDP, the largest annual deficit as a percentage of GDP since records began in 1948.

Explain the possible reasons for changes in the pattern of trade between the UK and the rest of the world.

[15 marks]

22. In July 2017, more people were employed in the UK than ever before. At the same time, the UK unemployment rate fell to 4.3%, the lowest rate for 40 years. Whilst this suggests that the government's policies for employment are working, some claim that zero-hours contracts, low real wages and temporary jobs have made many people worse off.

Explain the causes of cyclical **and** structural unemployment.

[15 marks]

23. Globalisation can make some product markets more contestable.

Which one of the following characteristics of globalisation is the most likely explanation for such an increase in contestability?

A A reduction in protectionism ⬭

B Greater synchronisation of economic cycles between countries ⬭

C Higher levels of labour migration ⬭

D The growth of employment in emerging market economies ⬭

[1 mark]

24. An African Development Bank report showed that Angola received more direct foreign investment than any other African country in 2015. Angola is a less economically developed country (LEDC) that has had fluctuating economic growth in the past. Despite having suffered from a long civil war which ended in 2002, many multinational corporations (MNCs) are now investing heavily in Angola's growing economy.

Evaluate the view that MNCs play a positive role in the development of LEDCs.

[25 marks]

25. An African Development Bank report showed that Angola received more direct foreign investment than any other African country in 2015. Angola is a less economically developed country (LEDC) that has had fluctuating economic growth in the past. Despite having suffered from a long civil war which ended in 2002, many multinational corporations (MNCs) are now investing heavily in Angola's growing economy.

Explain the main barriers that LEDCs face when attempting to achieve stable, long-term economic growth.

[15 marks]

STEMUP.CO.UK

26. **Essay 1**

The UK has been running a deficit on its balance of trade in goods and services since 1998. Expenditure-reducing and expenditure-switching policies can both be used to correct a trade deficit. However, the UK government has focused on other objectives rather than achieving a trade balance.

Assess the view that floating exchange rates are always better than fixed exchange rates.

[25 marks]

27. Between 2014 and 2018, the pound fell by more than 20% against the dollar and euro. Some argued that this would benefit the UK's macroeconomic performance, but others claimed that a lower exchange rate will cause problems.

Explain why the value of a currency may fall in a floating exchange rate system.

[15 marks]

28. Explain the factors that a commercial aircraft manufacturer, such as Boeing or Airbus, should consider when forecasting the future sales of its aircraft.

[15 marks]

29. **Essay 3**

Over the past 20 years, the growth of world trade has averaged 6% per year, twice as fast as the growth in world output. As countries become ever more interconnected, they experience both economic opportunities and threats.

Evaluate the view that international trade always benefits nations.

[25 marks]

30. **Essay 3**

Over the past 20 years, the growth of world trade has averaged 6% per year, twice as fast as the growth in world output. As countries become ever more interconnected, they experience both economic opportunities and threats.

Explain reasons for changes in the value of exports from the UK to the rest of the world.

[15 marks]

1. The formation of single markets by countries in various parts of the world, including within Europe, has shown that much is to be gained from increased economic cooperation.

Explain the main features of a single market, such as that which exists within the European Union (EU).

[15 marks]

2. **THE EUROPEAN UNION CONTEXT**

Extract F: Ireland emerges from bailout

Whilst many of the Eurozone members still face instability in their own economies, Ireland became the first economy to emerge from its bailout since the Eurozone crisis began. In its final report on Ireland's progress under the rescue scheme, the European Commission said: 'With public sector debt at 122% of GDP in 2013, Ireland needs to continue with its fiscal reduction programmes, reduce private-sector debt and improve bank profitability to revive lending.'

Of the UK's top ten European trading partners, Ireland is the only one with which the UK has a current account surplus. The importance of trade with Ireland is therefore of great significance. The Irish and UK economies are highly integrated and it is not yet clear how further cuts in Ireland might impact on the UK's macroeconomic performance.

Public sector debt across many European nations is still at very dangerous levels and Ireland's debt to GDP ratio is the second highest in the EU. Higher national debts may lead to problems such as crowding out, where private sector investment is reduced due to increased public sector borrowing. The EU introduced the Stability and Growth Pact (limiting total debt as a percentage of GDP to 60% and annual deficits to 3% of GDP) in order to prevent individual economies from creating instability across the EU. However, EU member countries have struggled to keep to the pact, with only four member countries not breaking the rules. Both Ireland and the UK have breached the pact since 2008. No doubt more problems lie ahead for the Eurozone.

Source: News reports, 2013

3. **The Global Context Extract C** (lines 7−9) states: 'These policies, however, have created greater divides in terms of the 'haves' and 'have nots' which may have consequences for the UK's macroeconomic performance.'

Using the data and your knowledge of economics, assess the importance for UK macroeconomic performance of increasing income inequality, **both** domestically **and** in other economies.

[25 marks]

4. **The Global Context Extract B** (lines 1−3) states: 'some economists are predicting that the US will play a leading role in driving world economic growth and, as the country which is the UK's main export partner, this may provide an injection into the UK's circular flow of income.'

Explain the term 'circular flow of income' **and** analyse how economic growth in the US may lead to increased national income in the UK.

[9 marks]

5.

THE EUROPEAN UNION CONTEXT

Extract E: The French economy faces problems

The International Monetary Fund (IMF) has warned the French government that, unless it makes major economic reforms to lower its labour costs and avoid tax rises, the economy is likely to experience reduced growth. This view was echoed in a recent survey of bankers, in which France was identified as the most serious threat to Europe's recovery from the debt crisis which has crippled growth and driven unemployment to record highs. The outlook for France, the Eurozone's second largest economy, is more worrying than that for Italy, Spain or Germany.

The Chief Executive officer of the Institute of International Finance said: 'There's a lack of concern about international competitiveness in France.' French President, François Hollande, is failing to revive business investment in the face of one of the world's highest tax burdens. Such investment could generate greater efficiency and higher productivity, especially important if the euro's exchange rate does not always work in France's favour.

An IMF spokesperson, Edward Gardner, also said that French unemployment, which currently stands at 11%, would continue to rise, despite President Hollande's vow to reduce it by the end of the year. 'It reflects in large part a general phenomenon in Europe that the recovery is slower in coming than we had expected.' The euro area's recovery almost came to a halt as the French economy unexpectedly shrank and German growth slowed.

The failure of the French economy to improve is in contrast to the overall success of the German economy and the stronger signs of recovery in the UK. President Hollande now faces difficult choices in reducing government spending to reach European budget deficit commitments. Furthermore, a recent announcement that VAT will rise, despite previous claims that there would be no significant tax rises, may cause further problems for the economy.

Source: News reports, 2013

6.

'Economic shocks can bring with them significant consequences for macroeconomic performance, as the UK knows only too well.'

Evaluate the likely impact of world economic growth **both** on the UK economy **and** on individuals in the economy.

[25 marks]

7.

The European Union Context Extract E (lines 8–9) states: 'There's a lack of concern about international competitiveness in France.'

Explain what is meant by 'international competitiveness' **and** analyse how the international competitiveness of France might be improved.

[9 marks]

STEMUP.CO.UK

8.

The European Union Context Extract F (lines 14−18) states: 'The EU introduced the Stability and Growth Pact …in order to prevent individual economies from creating instability across the EU. However, EU member countries have struggled to keep to the pact, with only four member countries not breaking the rules.'

Using the data and your knowledge of economics, evaluate the likely impact on the UK economy of other EU countries attempting to reduce their public sector debt at the same time.

[25 marks]

9.

There are several countries, such as Iceland, Serbia and Turkey, which may join the European Union in the future and so become members of the single market.

Evaluate the view that further enlargement of the European Union would be beneficial for the UK economy.

[25 marks]

10.

Since the start of the financial crisis of 2007−2008, the UK, the Eurozone and the USA have adopted quantitative easing (QE) in an attempt to stimulate their economies.

To what extent do you agree that maintaining inflation at the target rate of 2% should be the top priority of UK macroeconomic policy? Justify your answer.

[25 marks]

11.

THE EUROPEAN UNION CONTEXT

Extract F: Is deflation a bad thing?

Deflation is the new economic menace threatening European economies including the UK. In the Eurozone in particular, the European Central Bank is considering the use of quantitative easing to help avoid deflation; but why is it such a problem? Firstly, there is the argument that deflation delays spending. However, this does not relate to all forms of consumption. Another reason is the effect on debtors. Prices and perhaps incomes may fall, but the real value of debt increases. For firms experiencing falling revenues, and households with declining incomes, debt repayments become more of a burden. Governments can be caught in the same trap, because if prices and incomes fall, so does tax revenue.

There is an alternative view that moderate deflation is not a bad thing, especially if it is the result of innovation that reduces production costs. Also, some comfort is to be had from falling or barely rising prices as this goes some way to improve competitiveness. Some of the Eurozone's economies desperately need to become more competitive and they need to either reduce costs or increase productivity. However, falling prices deter investment, which makes productivity improvements far more difficult.

Source: news reports, 2014

STEMUP.CO.UK

12. The economies of Mexico, Indonesia, Nigeria and Turkey (MINT) have all been identified as the next main emerging market economies with high rates of growth. However, there are warnings that what goes up will eventually come down.

Explain why economies may go from periods of economic growth to recession.

[15 marks]

13. The economies of Mexico, Indonesia, Nigeria and Turkey (MINT) have all been identified as the next main emerging market economies with high rates of growth. However, there are warnings that what goes up will eventually come down.

Evaluate the view that living standards must be rising in economies which are experiencing economic growth.

[25 marks]

14. **The European Union Context Extract F** (line 1) states: 'Deflation is the new economic menace threatening European economies including the UK.'

Using the data and your knowledge of economics, evaluate the view that deflation in the EU's economies would inevitably be damaging to the UK's macroeconomic performance.

[25 marks]

15. Globalisation and outsourcing of manufacturing provides several potential benefits to economies. However, some countries, such as the UK, continue to suffer persistent trade deficits but are unable to resort to import controls.

Explain how the UK Government could reduce a balance of payments deficit on the current account, other than through the use of import controls.

[15 marks]

16. Globalisation and outsourcing of manufacturing provides several potential benefits to economies. However, some countries, such as the UK, continue to suffer persistent trade deficits but are unable to resort to import controls.

Assess the view that, for the UK, the economic benefits of globalisation outweigh the costs.

[25 marks]

17. THE GLOBAL CONTEXT

Extract B: Inflation never quite goes away

Governments around the world seeking a cure for inflation accept that such a cure may never be achieved. They recognise, therefore, that the next best thing is effective control in order to secure economic stability and sustained economic growth. Even then, past experience suggests that inflation will never be fully under control. Governments recognise that there may be both national and international forces at work which have a bearing on prices. International causes of inflation are inevitably going to be more difficult, or impossible, for a country to control than those whose origins are from within that country.

Some economists might argue that a weak global economy can help to suppress inflation but this weakness, if it persists, will have costs in terms of jobs and living standards. In any case, there may still be pessimism about inflation in the long term. As growth strengthens both in emerging and advanced economies, consumer demand, energy costs, primary commodity prices and wage costs are certain to rise. Agricultural commodity prices, for example, have fallen in recent decades but a significant upward trend could occur. Such a trend will be reinforced by the growth of a global population, now over 7 billion. An increasing global inflation problem could have serious consequences for all aspects of UK macroeconomic performance, including the balance of payments and employment. It breeds uncertainty for government, consumers and businesses and raises expectations of future inflation. Because it affects competitiveness and can disrupt trade and investment flows, the impact on both the current and the capital accounts of the balance of payments needs to be assessed. It is also likely that worsening inflation can halt any hesitant recovery. Overall, economic instability can be expected.

Source: news reports, 2012

18.

THE EUROPEAN UNION CONTEXT

Extract E: Would the UK be left out in the cold by saying goodbye to the EU?

In recent years, growing disenchantment with the EU has led to calls for the UK to leave the organisation. Supporters and opponents of UK membership have presented coherent arguments.

A study by the so-called Bruges Group, which opposes the EU, estimated the annual cost of UK membership to be £65bn. This included an estimated cost to businesses of £28bn to comply with EU regulations and an annual net contribution to the EU Budget of £14.6bn. A member of the EU Commission in 2011 estimated that the Common Agricultural Policy (CAP) causes the UK consumer to pay up to three times as much for food than if the CAP did not exist. The common external tariff raises prices of imports into the EU, including the prices of consumer goods and resources used by businesses. It also protects inefficient, high-cost EU producers.

Those supporting UK membership point, for example, to the 3.5 million UK jobs created from trade with the EU, either within the export sector or, more widely, through the operation of an export-led multiplier. The Single European Market has helped trade creation and has allowed EU labour to move to the UK, to the benefit of UK businesses. Despite not being in the eurozone, the UK has continued to attract a large share of the world's investment funds so that it is now the third largest recipient internationally. It is claimed that a large part of this is due to EU membership. The EU as a whole has also exerted much greater influence than could any individual EU country in negotiations to further global free trade. One business organisation has argued that non-membership would be like 'sitting outside in the corridors rather than at the decision table'.

19.

The Global Context Extract B (lines 15−16) argues: 'An increasing global inflation problem could have serious consequences for all aspects of UK macroeconomic performance, including the balance of payments and employment.'

Using the data and your economic knowledge, discuss the possible impact on the UK balance of payments of an increasing rate of inflation throughout the global economy.

[25 marks]

20.

The European Union Context Extract E (lines 12−14) points out that UK trade with the EU has created 3.5m jobs in the UK 'either within the export sector or, more widely, through the operation of an export-led multiplier'.

Explain the term 'export-led multiplier' **and** analyse **two** possible economic reasons for an increase in UK exports to the EU.

[9 marks]

21.

In July 2012, the Office for Budget Responsibility concluded that UK Government measures to cut the budget deficit have improved the UK's long-term economic prospects.

To what extent do you agree, if at all, that the implementation of a budget deficit reduction programme will improve the UK's long-term economic prospects? Justify your answer.

[25 marks]

STEMUP.CO.UK

22. **The European Union Context Extract E** (lines 1−2) states: ‘In recent years, growing disenchantment with the EU has led to calls for the UK to leave the organisation.’

Do you agree with the view that the UK economy would benefit if the UK left the EU? Justify your answer using the data and your economic knowledge.

[25 marks]

23. ‘When the exchange rate of a country’s currency causes problems, it may be down to free market orces, but government intervention might be to blame.’

Assess the importance of a floating exchange rate to a country trying to achieve macroeconomic stability.

[25 marks]

24. ‘Economic shocks can bring with them significant consequences for macroeconomic performance, as the UK knows only too well.’

Using at least **one example of each**, explain how demand-side and supply-side shocks might harm a country’s economic growth.

[15 marks]

25. ‘Globalisation has made many economies more prosperous, but all economies have been made more vulnerable to economic shocks.’

Explain the term ‘globalisation’ **and** the role that multinational companies play in the development of globalisation.

[15 marks]

26. ‘Globalisation has made many economies more prosperous, but all economies have been made more vulnerable to economic shocks.’

To what extent, if at all, have the economic consequences of globalisation differed between developed and developing countries?

[25 marks]

STEMUP.CO.UK

27. THE GLOBAL CONTEXT

Extract B: A decade of change, challenge and opportunity

This year, ten years will have passed since the downfall of Saddam Hussein in Iraq. Over these years the Middle East and North African countries (MENA) have continued to witness economic and political instability, culminating in the recent so-called 'Arab Spring' uprisings in countries such as Egypt, Libya and Syria.

The *Organisation for Economic Cooperation and Development (OECD)* distinguishes two groups within the MENA region. The resource-rich economies, such as Iraq, Saudi Arabia and Dubai, are recognised as being different from those seen as resource-deficient, such as Egypt and Jordan. For both groups, however, and despite the political problems for some, the OECD is optimistic about future growth.

The OECD argues that, as the global economy recovers, demand for goods and services from European and emerging markets in particular will encourage development of MENA's manufacturing and service sectors. Just as the UK, for example, enjoys a comparative advantage in financial services, some MENA economies are now developing attractively priced manufactured goods. Tourism is also ripe for further development.

However, although the OECD points to economic progress having been made, recent years have highlighted challenges which need to be faced in the MENA economies if there is to be further progress. Improvements in labour productivity and hence competitiveness are essential for increased trade with the rest of the world. More foreign investment in infrastructure and manufacturing plant is desperately needed, with advanced countries such as the UK having a role to play here. Unemployment remains persistently high in some MENA countries, as does inflation.

Jordan is beginning to show what can be done to bring about a more successful economy. Through productivity improvements, it is now one of the most competitive MENA countries. This has helped it to negotiate a number of significant free trade agreements, including those with the EU and the US. Exports have brought increased economic growth to Jordan, as has domestic investment.

One of the benefits of economic success can be a higher standard of living. The Human Development Index (HDI) allows international comparisons of living standards. The Arab states of the Middle East have seen an improvement in the index from 0.444 in 1980 to 0.641 in 2011. The latter figure can be compared with 0.862 for the UK.

Income per head, access to healthcare and education, life expectancy, the quality of the environment and a fair distribution of income are key factors in any assessment of living standards. The UK and other developed countries need to remember that higher living standards can mean bigger markets for goods and services.

In many of the MENA economies, there is still much to be done to achieve sustained economic success. But, where Jordan leads, others will begin to follow. To do so would see a significant strengthening of MENA's economic importance in the global economy.

29. THE EUROPEAN UNION CONTEXT

Extract D: Economic growth or a double-dip recession?

In the third quarter of 2011, UK real GDP rose by 0.6%. Within this, manufacturing output increased by just 0.1%, while services such as banking and finance showed a 0.7% increase. Unemployment was around 8% of the labour force.

Such weak growth figures are a reflection of the economic situation within the European Union (EU) as a whole. The likelihood is that the next few years for the UK economy will be bleak. This pessimism is shared by other EU countries.

Prospects do not look good for the EU economy as a whole but, of course, the detailed picture varies between member countries. There has been a general deterioration in confidence. Intense financial turmoil in money and capital markets is affecting both investment and consumption. Deficit-reduction programmes are also suppressing domestic demand. Weaknesses in the global economy are holding back UK and EU exports. In mid-2011, the hope had been expressed by some economists that exports would be a major driver of economic growth, but such optimism proved groundless.

Attention has again turned to domestic demand within the EU. The projected decrease in inflation in the UK and in other member countries, coupled with limited wage growth, should at least limit any further significant erosion of real disposable income. However, there is continuing concern over the level of household debt which may yet constrain demand. Overall, the fears of a double-dip recession still loom large.

Within the UK, there is a debate over the relative importance of the various potential sources of growth in the next few years. There is a view that tightening of fiscal policy in the UK, together with similar policies in other EU countries, is damaging consumer demand and business confidence unnecessarily. The UK think-tank, the Institute for Public Policy Research (IPPR), argues for changes to be made to UK fiscal policy, and supports more severe spending cuts only when the economy improves.

The Institute therefore points to three possible solutions to the problem of slow UK and EU growth. These are: increases in government spending; substantial increases in global demand; and households and firms being given stronger incentives to spend more, for example through tax cuts. While growth in demand is seen as an important determinant of economic growth over the next few years, elements of government spending and incentives to business can make important contributions to the strengthening of the supply side of the economy.

None of the solutions offered by the IPPR seems likely to occur at the moment. The UK Government appears to be determined to maintain its tight fiscal policy, arguing that it is the only basis for sustained long-term growth. The global economy is far from stable, with increased talk by some of greater protectionism, although the emerging markets, such as India and Brazil, offer some hope for UK and EU exports. Households lack the confidence, and often the ability, to increase spending, while companies lack the optimism to invest. It needs to be borne in mind that the EU remains the UK ’s most important single trading partner by far. The best hope for stronger UK economic growth must therefore surely rest with the EU, but this requires the eurozone to be stabilised and macroeconomic conditions to improve throughout the EU.

THE EUROPEAN UNION CONTEXT

Extract D: Turkey − gateway to Asia

Turkey has been in talks since 2005 regarding possible membership of the European Union (EU). While further enlargement of the EU causes some concern, serious consideration needs to be given to Turkey. Its geographical position links Europe and Asia. Since Asia is currently driving world economic growth, Turkey can be an important strategic gateway to Asia for the EU.

The UK Government supports Turkey's application for EU membership but questions still persist. If Turkey joins the EU, can the UK successfully take up the resulting trade and investment opportunities? Will the UK be overwhelmed by imports and cheap migrant labour? Will UK businesses be determined enough to grasp any opportunities?

Turkey has a population of 75 million, which is expected to rise to 100 million by 2020. The average age is just 27 and it has vast economic potential. Turkey's GDP is ranked 18th in the world, and GDP per capita is £7163. Like the UK, there has been some negative growth in recent years but the economy recovered to achieve 11% growth in the first quarter of 2010. Between 2002 and 2007, Turkey's annual average economic growth of 7% was far greater than that of the UK.

About 50% of Turkey's exports are to Europe, with textiles being particularly important. Machinery and semi-manufactured goods are major imports. The UK does not yet rank alongside countries such as Germany, Italy, China and the US as important exporters to Turkey, but opportunities certainly exist.

Turkey has had a reputation for economic instability. Since 2005, for example, inflation has been between 5% and 12%. Unemployment has remained in double figures: 10% of the labour force in 2005 and 14% currently. However, Turkey now boasts a relatively modest budget deficit of between 4% and 5% of GDP.

Despite a degree of instability, Turkey is seen as an attractive centre for investment. For example, the country received £115 bn in foreign direct investment in 2009. However, Turkey's infrastructure still leaves much to be desired.

UK businesses need to consider the potential economic opportunities. Lord Digby Jones, formerly of the *Confederation of British Industry* (CBI), points out that Turkey's recent economic growth is from a low base. According to Lord Jones, "Whereas a little bit of growth in a prosperous country such as Germany does not make much difference, in a developing country such as Turkey millions of people get richer". This is perhaps an exaggeration, especially in the short run, but a valid point is being made.

The UK must not be blind to the potential problems of Turkey's possible membership of the EU and must also be in a position to grasp the opportunities which are sure to appear.

9. THE EUROPEAN UNION CONTEXT

Extract D: Is EU unity threatened?

Europe, and indeed much of the world, was shaken by the depth of the economic downturn from 2008. Many countries, including the UK, saw the solution to be a return to Keynesian economics and, therefore, tolerance of large budget deficits. This was coupled with significant monetary expansion, so that, in the UK for example, the Bank of England Bank Rate was cut to 0.5% in 2009, accompanied by a policy of 'quantitative easing' (increases in the money supply).

The UK pressed other EU governments to embark on fiscal expansion. Not all shared the UK's enthusiasm and, at best, wanted only a much more modest fiscal stimulus than was the case in the UK. However, events sometimes overtook such wishes. Ironically, given the scale of the UK fiscal stimulus, until the latter part of 2009 the UK was the only major economy to remain in recession. This may reflect the greater significance of the housing and financial sectors in the UK compared to other EU countries.

The fiscal position of many EU countries has given rise to concern. Italy, for example, now has a national debt (the total outstanding debt of central government) of around 120% of GDP, even though its annual budget deficit is not exceptionally large. Some countries have shown a greater determination than Italy to cut their deficits. In December 2009, for example, Ireland announced sharp cuts in public sector wages. But it is certainly not just Italy which has shown complacency. The EU's Stability and Growth Pact limits annual borrowing to 3% of GDP. EU governments are under increasing pressure to return to this target by 2014.

The short- to medium-term benefits of fiscal expansion during downturns cannot be denied. Government spending can initiate a powerful stimulus to an economy through the multiplier process. Aggregate demand therefore rises. The UK Pre-Budget Report put government spending at £676 billion. Tax cuts will give households more spending power. Coupled with cheap credit and retail price discounts, recovery can therefore be helped through increased consumption.

However, the impact of increased government borrowing arising from budget deficits across the EU is of concern amongst some economists. It may eventually force the authorities to increase interest rates, lead to 'crowding-out' of private sector activity and make public spending cuts and tax increases an inevitability. In the UK, for example, a VAT rate of 17.5% was restored in January 2010 following a temporary cut to 15%. Equally, the 2009 Pre-Budget Report announced an increase in National Insurance contributions.

The problem in trying to assess the impact of fiscal expansion is, of course, not knowing what might have happened without it. Certainly, some economists are quick to attribute the end of recession in France and Germany in 2009 to such fiscal loosening. Indeed, it is difficult to argue that, for any country in the EU, economic growth and employment cannot be beneficial to some extent at a time when business and consumer confidence are both at a low level.

Whether such a policy eventually causes inflation to make an unwelcome return remains to be seen. At that point, EU members may experience a greater urgency to balance budgets and reduce monetary expansion.

Using the data and your economic knowledge, assess the view that living standards in the UK are likely to benefit from sustained economic growth in the economies of Africa.

[25 marks]

STEMUP.CO.UK

11. THE GLOBAL CONTEXT

Extract B: Living standards

Economists can generally agree on the causes of economic growth such as investment, innovation and improvements in productivity. There is greater disagreement over the consequences. An important part of the debate is the impact of economic growth on living standards. The debate has become more complex as measurement of living standards has taken on greater sophistication. GDP per capita (income per head) remains one of the basic measures.

Supporters of continued economic growth point to increased consumption possibilities, greater welfare, more support for the disadvantaged and more resources for health, education and infrastructure.

Opponents of unlimited economic growth point to the rapid depletion of exhaustible natural resources and environmental deterioration. The Copenhagen Summit of December 2009 brought the latter issue into sharp focus once again.

Various indices, such as the Human Development Index, incorporate a number of factors into their calculations in order to give as comprehensive a view of living standards as possible and to allow more accurate international comparisons. Factors include life expectancy, infant mortality and nutritional levels.

The Legatum Institute publishes a global survey annually, popularly known as a ‘prosperity index’. It brings together data on, for example, economic growth, welfare, happiness, crime and healthcare. This data is then used to rank countries.

The 2009 index ranked 104 countries. The UK was placed 12th (its best position for three years). Low scores for key public services kept it out of the top ten. All African countries were in the bottom half of the index.

However, the continent of Africa is undergoing economic change. The World Bank points to a rapid transformation in some countries. Mozambique has seen annual average growth of 8% in the last decade, Kenya has emerged as a major global supplier of cut flowers and Rwanda is developing tourism very successfully. While Lesotho is developing its clothing industry, Ethiopia is starting to manufacture footwear. Can we look to Africa for the next wave of ‘emerging economies’, to follow India and China? In 2009, Africa as a whole had the world’s third highest rate of growth behind India and China. Africa’s role as a major supplier of raw materials to China also illustrates its increasing economic links with the rest of the world.

As a result of this economic change, living standards in Africa will no doubt improve. Additionally, the living standards of developed countries, including the UK, will be affected by economic growth in Africa. Export markets for both goods and services will strengthen, as will investment opportunities, and natural resources will become more accessible.

But how long before the UK faces stiff competition from Africa in agriculture, manufacturing and service activities? No one can accurately predict the impact on the UK economy but the careful monitoring of developments in Africa will become increasingly necessary.

16. THE EUROPEAN UNION CONTEXT

Extract D: Is European Union (EU) unity threatened?

In March 2009, the Hungarian Government asked Germany for €190 billion to prevent what it saw as a new economic 'Iron Curtain' from going up across Europe. The term 'Iron Curtain' was intended to remind Europeans of the Soviet-era divide between the poorer Communist East and the more prosperous, free, democratic West. Hungary argued that, without such help, the contrast between the richer and poorer members of the EU would only widen further. Germany's refusal of Hungary's request symbolised, for many, the deepening divide between the EU's richer and poorer members.

The contrast in fortunes is seen by newer members of the EU, such as Latvia, Lithuania and Hungary, as one which can only worsen during the recession and which may threaten the EU's existence in the long term. On the other hand, some people in the more−established members of the EU, such as the UK and France, have become increasingly disillusioned with the EU and especially with the level of assistance now expected from these more-established members by the newer members.

At the Brussels Summit of March 2009, the Czech Prime Minister warned of 'the greatest crisis in the history of European integration'. Gordon Brown, for the UK, spoke of the need for unity and common policies. The Single European Market, for example, is seen as an evolving policy which can foster prosperity for all and bring closer integration.

Cyclical unemployment is now widespread, however, and has been growing faster in the Eastern members of the EU than in those of the West. This could increase tensions between Eastern and Western members of the EU. The impact of cyclical unemployment on both individuals and whole economies can be serious, as incomes and output fall and welfare-dependency becomes more widespread.

Nevertheless, it would be wrong to argue that the wealthier members of the EU have been totally immune to the problem. The Netherlands, the worst affected Western member, experienced a 34% rise in unemployment between January 2008 and March 2009. There was a much greater rise in Latvia and Lithuania, both in the East.

During a recession, questions are likely to be asked about the future of the EU as policy disagreements emerge. Supporters claim that the EU is a force for good and needs to be strengthened, rather than weakened or abandoned. In this way, it is argued, East-West tensions can be kept at bay.

Such supporters feel that an enlarged EU, with open markets based on the Single European Market policy, helps spread benefits of membership across the whole organisation and offers the best chance of rapid recovery. In the UK, however, many see openness as a threat to jobs and to living standards.

In the current climate, it has also been argued that a more ambitious set of common macroeconomic policies would help speed recovery in the EU. Fiscal and supply-side policies come into this category, as well as monetary policy, even though only 16 members of the 27-member EU have adopted the euro. Even so, limited agreement on monetary policy, such as interest rates, could be of benefit.

The UK has not had the leading role in EU recovery policies that it has had globally, but it has shown a willingness to play its part in fostering unity and economic revival so that Europe can make a vital contribution to international recovery. Talk of disunity and the break-up of the EU can only cause instability and hinder economic recovery. This is something that members can ill-afford, particularly the UK. Growth, jobs and stable prices are desperately needed.

STEMUP.CO.UK

20. THE GLOBAL CONTEXT

Extract B: China: a bright spot in a gloomy world

China, despite its recent rapid growth, has not remained immune to the economic downturn as some economists had hoped. However, it remains an economy which is looking to the future with some optimism. It continues to invest in the production of raw materials and resources in other countries. The consequent increased global investment should give a much-needed boost to jobs and growth in countries benefiting from it. Despite this investment, growth in demand from China is likely to continue to push up world raw material prices in the long term.

Certainly, China has shown an increased recognition of the need to play its part in bringing about global recovery. For example, in a recent international agreement to boost the funds of the International Monetary Fund (IMF) by $500 billion, China has agreed to contribute $40 billion, compared to the UK's $15 billion. The IMF can now fulfil its promise of loans to such countries as Poland and Mexico, which should contribute to the greater global stability needed for recovery.

Nevertheless, China, fearing inflation, has expressed its concern about the policy of some leading central banks, including the Bank of England, of quantitative easing (increasing the money supply) in order to bring about economic revival by increasing aggregate demand. China also knows that its policy of holding down the external value of its currency in order to boost export-led growth is only likely to be successful if a global revival of demand is achieved. For example, China saw a 25% decline in exports in 2008. The depressed UK market will have contributed to this decline.

The other major world economies are keen to keep talking with China and win its approval for a host of measures to bring about recovery. They want to engage China in more long-term talks as well. These will include international financial reforms and environmental policies, especially as China's industrial growth continues to create negative externalities.

China has every reason to be optimistic about its future prospects. In June 2009, the *Organisation for Economic Co-operation and Development* (OECD) forecast growth for that year of 7.7% and 9.3% for 2010. To a country used to double-digit growth figures, this may seem like a recession. However, such figures are a far cry from the negative growth seen in many parts of the global economy, including the UK economy.

Nevertheless, the ongoing concern of the Chinese Government is reflected in the decision to give a $565 billion fiscal stimulus to its economy in 2009. It is also considering protectionist policies, which may impact on those countries hoping to increase exports to China. For the World Bank, however, the Chinese economy remains a 'relative bright spot in an otherwise gloomy global economy' and countries such as the UK are keen to see China help pull the global economy out of recession.

China has reacted coolly to suggestions that a solution to the world's economic problems lies in the hands of two powers: itself and the US. Although the UK has played a leading role in international discussions on recovery, such an assertion may yet prove to have a ring of truth. What is certain is that co-operation is vital in ensuring that appropriate policies are followed to bring about a new era of sustained growth.

STEMUP.CO.UK

25. **THE GLOBAL CONTEXT**

Extract B: Winners and losers

The debate over the consequences of globalisation for individual countries continues. Inevitably, there will be benefits and costs, winners and losers. For example, whilst the UK has experienced deindustrialisation, its service sector has been successful in world markets.

As the debate continues, one aspect of globalisation cannot be disputed: that the greater integration of economies has meant that major events occurring in one part of the world will have an impact not just on the affected country or region but are now much more likely to have global significance.

Some events are known about well in advance of them actually happening. Major sports competitions are an example. In 2012, for instance, the UK will host the Olympic Games. Similarly, Russia and Qatar will host the football World Cup in 2018 and 2022 respectively. The economic impact of such events on host countries is likely to be positive. For other countries, the immediate impact is likely to be more limited. However, the UK and other economies could benefit if these events make the host countries more open to trade and investment in the long term.

Other events are far less predictable or are completely unpredictable. For example, how might the UK cope with a disruption to gas and oil supplies if relations with Russia deteriorate or political turbulence in the Middle East escalates? What path to recovery will the UK take following the devastating effects of the 2008 US financial crisis?

Generalisations about the economic impact of natural disasters are often unhelpful. Hurricane Katrina in 2006, which caused billions of dollars of damage in the New Orleans area of the USA, had minimal economic impact on the rest of the world. However, the Japanese earthquake and tsunami in 2011 are on a different scale. Japan accounts for 7% of world GDP. There are fears that the scale of the damage may lead to a return to recession in Japan, as fearful Japanese consumers spend less and save more. Global supply chains originating in Japan, such as car components supplied to the rest of the world, have been severely disrupted. The UK, as well as Japan's other trading partners, will struggle to maintain exports to the Japanese market until stability is restored.

Like any other country, the UK needs to have a strong economy to be able to respond successfully to all types of global event and to secure sustained economic growth. Important factors include high productivity, resource mobility, innovation, skilled labour, a strong infrastructure in its widest sense and general flexibility in the economy. The ability to make use of these supply-side qualities will, however, also depend on aggregate demand. The impact of major global events on UK aggregate demand will inevitably vary considerably, positively or negatively, with unknown consequences for macroeconomic performance.

Using the data and your economic knowledge, assess the possible economic consequences for the UK economy of an EU-wide fiscal policy requiring all member states to balance their budgets.

[25 marks]

28. **THE EUROPEAN UNION CONTEXT**

Extract D: The fiscal remedy for recession

The recession of 2009 brought renewed interest amongst EU governments in a so-called Keynesian approach to spending their way out of recession. They were desperate to avoid a prolonged period of negative growth and the accompanying mass unemployment.

In the UK, as well as within the eurozone, fiscal rules were abandoned as the fight for economic recovery began. The Stability and Growth Pact of the eurozone, to which the UK had also adhered in an informal way before the recession, limited budget deficits to 3% of GDP and a nation's debt to 60% of GDP. Such constraints were often far exceeded and increasing concerns were being expressed. In May 2010, the new UK Government became a prominent voice within Europe for a reversal of fiscal policy, with public spending cuts and tax increases.

The UK Government's policy was given some support by the economic crisis unfolding in Greece, a member of the eurozone. The Greek Government needed to be 'bailed out' by fellow member states if it was not to default on its debts. It had a budget deficit of 14% of GDP and a national debt of 115% of GDP in 2009, a year when its GDP also fell by 2%.

There was concern in the EU that such a situation had been allowed to develop, with increasing calls for EU-wide controls. France and Germany were pressing for an EU institution such as the European Commission to provide such a role, with the power to impose an EU-wide fiscal policy on all member states and not just the eurozone.

The UK Government opposed any such powers over member countries. However, it had gone as far as to establish an Office for Budget Responsibility (OBR), intended to keep the Government's tax and spending plans under control by providing a reality check on the state of the nation's finances. The OBR, however, does not have the powers that some were envisaging for the EU.

In a climate of greater stability in 2010, some still believed that an EU-wide fiscal policy needed to be a key part of the evolution towards a federal state. It cannot be denied that the best way forward must be that which delivers macroeconomic stability across the EU. Whether this comes about through member governments each developing a policy of fiscal responsibility or through a fiscal policy imposed by the EU on all member states remains open to debate.

Using the data and your economic knowledge, assess the importance to the UK economy of continued economic growth in India.

[25 marks]

STEMUP.CO.UK

30. THE GLOBAL CONTEXT

Extract B: A passage to India

In July 2010, the UK Prime Minister led a Government delegation to India. The hope was that India's economic success could help to bring some relief to the UK economy and speed the recovery process through increased exports.

India's growth in 2010 is expected to be about 9%. Its GDP per capita is $3100, although over 400 million Indians live below the international poverty line of $1.25 per day. It has a labour force of almost 500 million but an official rate of unemployment of 11%. Quarterly sector growth is impressive: 1.8% in services, 2.2% in manufacturing and 1.7% in agriculture between January and March 2010.

For the Indian Government, inflation and economic growth are top of the agenda. Unfortunately, there is often a trade-off between these two macroeconomic indicators. Inflation jumped from 1.3% in October 2009 to almost 5% in November 2009. However, food inflation was 19%. As in other countries, rising oil costs are also amongst the causes of inflation for the Indian economy.

The UK Government still hopes to promote increased UK economic involvement in India. Certainly Indian business has become more involved in the UK. *Tata*, one of India's oldest companies, is now the UK's leading manufacturer through its ownership of *Corus Steel and Jaguar Land Rover*. India is now more likely to be creating jobs in the UK through direct investment rather than 'stealing' them, for example through call-centre activity relocated from the UK. UK business needs to rise to the challenges and opportunities presented in India. Companies such as *Vodafone* (telecommunications) and *BAE Systems* (defence and aerospace) are amongst the recent success stories and it is widely believed that India's increased demand for world-class services, for example financial and legal, can be met by the UK.

Infrastructure investment is urgent. Each year, about 40% of India's agricultural produce rots before arriving at market because of inadequate storage facilities and poor road and rail links. The Indian Government's plans to spend $500bn between 2010 and 2013 on new ports, roads, rail links and airports will help to improve the situation. This investment is an export opportunity for UK firms specialising in infrastructure projects. The growth of the Indian economy will also help UK service exporters such as banking, education and health-care businesses. Currently, India accounts for only 1% of UK exports.

However, India remains fiercely protective, and investment and trade flows from the UK could remain limited. Progress will depend on whether a long-awaited EU-India trade deal becomes a reality and on the outcome of the *World Trade Organization's* global trade talks. Many argue that India can only benefit from increased international trade.

The UK Government said at the time of the Prime Minister's July 2010 visit to India that the UK had a vital stake in India's rise to becoming a global power and in its future prosperity. At the same time, a view was also expressed that the UK needs India much more than India needs the UK. It is hoped that all aspects of the UK's macroeconomy can eventually benefit as India develops further.
