1. THE GLOBAL CONTEXT

Extract B: Living standards

Economists can generally agree on the causes of economic growth such as investment, innovation and improvements in productivity. There is greater disagreement over the consequences. An important part of the debate is the impact of economic growth on living standards. The debate has become more complex as measurement of living standards has taken on greater sophistication. GDP per capita (income per head) remains one of the basic measures.

Supporters of continued economic growth point to increased consumption possibilities, greater welfare, more support for the disadvantaged and more resources for health, education and infrastructure.

Opponents of unlimited economic growth point to the rapid depletion of exhaustible natural resources and environmental deterioration. The Copenhagen Summit of December 2009 brought the latter issue into sharp focus once again.

Various indices, such as the Human Development Index, incorporate a number of factors into their calculations in order to give as comprehensive a view of living standards as possible and to allow more accurate international comparisons. Factors include life expectancy, infant mortality and nutritional levels.

The Legatum Institute publishes a global survey annually, popularly known as a 'prosperity index'. It brings together data on, for example, economic growth, welfare, happiness, crime and healthcare. This data is then used to rank countries.

The 2009 index ranked 104 countries. The UK was placed 12th (its best position for three years). Low scores for key public services kept it out of the top ten. All African countries were in the bottom half of the index.

However, the continent of Africa is undergoing economic change. The World Bank points to a rapid transformation in some countries. Mozambique has seen annual average growth of 8% in the last decade, Kenya has emerged as a major global supplier of cut flowers and Rwanda is developing tourism very successfully. While Lesotho is developing its clothing industry, Ethiopia is starting to manufacture footwear. Can we look to Africa for the next wave of 'emerging economies', to follow India and China? In 2009, Africa as a whole had the world's third highest rate of growth behind India and China. Africa's role as a major supplier of raw materials to China also illustrates its increasing economic links with the rest of the world.

As a result of this economic change, living standards in Africa will no doubt improve. Additionally, the living standards of developed countries, including the UK, will be affected by economic growth in Africa. Export markets for both goods and services will strengthen, as will investment opportunities, and natural resources will become more accessible.

But how long before the UK faces stiff competition from Africa in agriculture, manufacturing and service activities? No one can accurately predict the impact on the UK economy but the careful monitoring of developments in Africa will become increasingly necessary.

2. **The Global Context Extract B** (lines 35–37) concludes: ‘Globalisation must surely have played its part in the success of the UK economy…whatever problems it may also have created.’

Using the data and your economic knowledge, to what extent do you agree with the view that globalisation has been of benefit to UK macroeconomic performance?

[25 marks]

3. **The Europena Union Context Extract Extract D** (lines 27−28) states that ‘the impact of the increased government borrowing arising from budget deficits across the EU is of concern amongst some economists’.

Using the data and your economic knowledge, assess the impact on the UK economy of increased government borrowing by EU governments.

[25 marks]

4. **The European Union Context Extract F** (lines 14−18) states: ‘The EU introduced the Stability and Growth Pact …in order to prevent individual economies from creating instability across the EU. However, EU member countries have struggled to keep to the pact, with only four member countries not breaking the rules.’

Using the data and your knowledge of economics, evaluate the likely impact on the UK economy of other EU countries attempting to reduce their public sector debt at the same time.

[25 marks]

5. **The Europena Union Context Extract D** (lines 22−23) argues that government spending ‘can initiate a powerful stimulus to an economy through the multiplier process’.

Explain ‘the multiplier process’ **and** analyse its possible impact on an economy’s unemployment **and** economic growth.

[9 marks]

STEMUP.CO.UK

6. THE EUROPEAN UNION CONTEXT

Extract D: Is EU unity threatened?

Europe, and indeed much of the world, was shaken by the depth of the economic downturn from 2008. Many countries, including the UK, saw the solution to be a return to Keynesian economics and, therefore, tolerance of large budget deficits. This was coupled with significant monetary expansion, so that, in the UK for example, the Bank of England Bank Rate was cut to 0.5% in 2009, accompanied by a policy of 'quantitative easing' (increases in the money supply).

The UK pressed other EU governments to embark on fiscal expansion. Not all shared the UK's enthusiasm and, at best, wanted only a much more modest fiscal stimulus than was the case in the UK. However, events sometimes overtook such wishes. Ironically, given the scale of the UK fiscal stimulus, until the latter part of 2009 the UK was the only major economy to remain in recession. This may reflect the greater significance of the housing and financial sectors in the UK compared to other EU countries.

The fiscal position of many EU countries has given rise to concern. Italy, for example, now has a national debt (the total outstanding debt of central government) of around 120% of GDP, even though its annual budget deficit is not exceptionally large. Some countries have shown a greater determination than Italy to cut their deficits. In December 2009, for example, Ireland announced sharp cuts in public sector wages. But it is certainly not just Italy which has shown complacency. The EU's Stability and Growth Pact limits annual borrowing to 3% of GDP. EU governments are under increasing pressure to return to this target by 2014.

The short- to medium-term benefits of fiscal expansion during downturns cannot be denied. Government spending can initiate a powerful stimulus to an economy through the multiplier process. Aggregate demand therefore rises. The UK Pre-Budget Report put government spending at £676 billion. Tax cuts will give households more spending power. Coupled with cheap credit and retail price discounts, recovery can therefore be helped through increased consumption.

However, the impact of increased government borrowing arising from budget deficits across the EU is of concern amongst some economists. It may eventually force the authorities to increase interest rates, lead to 'crowding-out' of private sector activity and make public spending cuts and tax increases an inevitability. In the UK, for example, a VAT rate of 17.5% was restored in January 2010 following a temporary cut to 15%. Equally, the 2009 Pre-Budget Report announced an increase in National Insurance contributions.

The problem in trying to assess the impact of fiscal expansion is, of course, not knowing what might have happened without it. Certainly, some economists are quick to attribute the end of recession in France and Germany in 2009 to such fiscal loosening. Indeed, it is difficult to argue that, for any country in the EU, economic growth and employment cannot be beneficial to some extent at a time when business and consumer confidence are both at a low level.

Whether such a policy eventually causes inflation to make an unwelcome return remains to be seen. At that point, EU members may experience a greater urgency to balance budgets and reduce monetary expansion.

9.

THE GLOBAL CONTEXT

Extract B: China: a bright spot in a gloomy world

China, despite its recent rapid growth, has not remained immune to the economic downturn as some economists had hoped. However, it remains an economy which is looking to the future with some optimism. It continues to invest in the production of raw materials and resources in other countries. The consequent increased global investment should give a much-needed boost to jobs and growth in countries benefiting from it. Despite this investment, growth in demand from China is likely to continue to push up world raw material prices in the long term.

Certainly, China has shown an increased recognition of the need to play its part in bringing about global recovery. For example, in a recent international agreement to boost the funds of the International Monetary Fund (IMF) by $500 billion, China has agreed to contribute $40 billion, compared to the UK's $15 billion. The IMF can now fulfil its promise of loans to such countries as Poland and Mexico, which should contribute to the greater global stability needed for recovery.

Nevertheless, China, fearing inflation, has expressed its concern about the policy of some leading central banks, including the Bank of England, of quantitative easing (increasing the money supply) in order to bring about economic revival by increasing aggregate demand. China also knows that its policy of holding down the external value of its currency in order to boost export-led growth is only likely to be successful if a global revival of demand is achieved. For example, China saw a 25% decline in exports in 2008. The depressed UK market will have contributed to this decline.

The other major world economies are keen to keep talking with China and win its approval for a host of measures to bring about recovery. They want to engage China in more long-term talks as well. These will include international financial reforms and environmental policies, especially as China's industrial growth continues to create negative externalities.

China has every reason to be optimistic about its future prospects. In June 2009, the *Organisation for Economic Co-operation and Development* (OECD) forecast growth for that year of 7.7% and 9.3% for 2010. To a country used to double-digit growth figures, this may seem like a recession. However, such figures are a far cry from the negative growth seen in many parts of the global economy, including the UK economy.

Nevertheless, the ongoing concern of the Chinese Government is reflected in the decision to give a $565 billion fiscal stimulus to its economy in 2009. It is also considering protectionist policies, which may impact on those countries hoping to increase exports to China. For the World Bank, however, the Chinese economy remains a 'relative bright spot in an otherwise gloomy global economy' and countries such as the UK are keen to see China help pull the global economy out of recession.

China has reacted coolly to suggestions that a solution to the world's economic problems lies in the hands of two powers: itself and the US. Although the UK has played a leading role in international discussions on recovery, such an assertion may yet prove to have a ring of truth. What is certain is that co-operation is vital in ensuring that appropriate policies are followed to bring about a new era of sustained growth.

11. ‘The long-term progress made towards a free-trade world must be maintained. Calls for greater protectionism would lead to a disastrous collapse of global economic activity.’

Assess the view that the progress made towards free trade has brought significant economic benefits **both** to the UK **and** to the rest of the world.

[25 marks]

12. **The European Union Context Extract D** (lines 16−18) suggests that France and Germany would like the EU to have ‘the power to impose an EU-wide fiscal policy on all member states and not just the eurozone’.

Using the data and your economic knowledge, assess the possible economic consequences for the UK economy of an EU-wide fiscal policy requiring all member states to balance their budgets.

[25 marks]

13. **The European Union Context Extract D** (lines 33 −34) argues that the ‘UK must not be blind to the potential problems of Turkey’s possible membership of the EU and must also be in a position to grasp the opportunities which are sure to appear’.

Using the data and your economic knowledge, assess the potential economic consequences for the UK if Turkey joined the EU.

[25 marks]

14. **THE EUROPEAN UNION CONTEXT**

Extract D: Turkey − gateway to Asia

Turkey has been in talks since 2005 regarding possible membership of the European Union (EU). While further enlargement of the EU causes some concern, serious consideration needs to be given to Turkey. Its geographical position links Europe and Asia. Since Asia is currently driving world economic growth, Turkey can be an important strategic gateway to Asia for the EU.

The UK Government supports Turkey's application for EU membership but questions still persist. If Turkey joins the EU, can the UK successfully take up the resulting trade and investment opportunities? Will the UK be overwhelmed by imports and cheap migrant labour? Will UK businesses be determined enough to grasp any opportunities?

Turkey has a population of 75 million, which is expected to rise to 100 million by 2020. The average age is just 27 and it has vast economic potential. Turkey's GDP is ranked 18th in the world, and GDP per capita is £7163. Like the UK, there has been some negative growth in recent years but the economy recovered to achieve 11% growth in the first quarter of 2010. Between 2002 and 2007, Turkey's annual average economic growth of 7% was far greater than that of the UK.

About 50% of Turkey's exports are to Europe, with textiles being particularly important. Machinery and semi-manufactured goods are major imports. The UK does not yet rank alongside countries such as Germany, Italy, China and the US as important exporters to Turkey, but opportunities certainly exist.

Turkey has had a reputation for economic instability. Since 2005, for example, inflation has been between 5% and 12%. Unemployment has remained in double figures: 10% of the labour force in 2005 and 14% currently. However, Turkey now boasts a relatively modest budget deficit of between 4% and 5% of GDP.

Despite a degree of instability, Turkey is seen as an attractive centre for investment. For example, the country received £115 bn in foreign direct investment in 2009. However, Turkey's infrastructure still leaves much to be desired.

UK businesses need to consider the potential economic opportunities. Lord Digby Jones, formerly of the *Confederation of British Industry* (CBI), points out that Turkey's recent economic growth is from a low base. According to Lord Jones, "Whereas a little bit of growth in a prosperous country such as Germany does not make much difference, in a developing country such as Turkey millions of people get richer". This is perhaps an exaggeration, especially in the short run, but a valid point is being made.

The UK must not be blind to the potential problems of Turkey's possible membership of the EU and must also be in a position to grasp the opportunities which are sure to appear.

15. **The Global Context Extract B** (lines 29 −30) states that 'the UK needs to have a strong economy to be able to respond successfully to all types of global event …'.

Using the data and your economic knowledge, assess the significance to UK macroeconomic performance of major global events such as sports competitions, natural disasters and economic downturns.

[25 marks]

STEMUP.CO.UK

16. **The Global Context Extract B** (lines 36–37) states that, if other MENA economies were to follow Jordan's lead, there would be a 'significant strengthening of MENA's economic importance in the global economy'.

To what extent, if at all, should developed countries such as the UK be concerned about a significant strengthening of the economic importance of MENA countries in the global economy? Justify your answer, using the data and your economic knowledge.

[25 marks]

17. 'Globalisation has made many economies more prosperous, but all economies have been made more vulnerable to economic shocks.'

To what extent, if at all, have the economic consequences of globalisation differed between developed and developing countries?

[25 marks]

STEMUP.CO.UK

18. **THE EUROPEAN UNION CONTEXT**

Extract D: The fiscal remedy for recession

The recession of 2009 brought renewed interest amongst EU governments in a so-called Keynesian approach to spending their way out of recession. They were desperate to avoid a prolonged period of negative growth and the accompanying mass unemployment.

In the UK, as well as within the eurozone, fiscal rules were abandoned as the fight for economic recovery began. The Stability and Growth Pact of the eurozone, to which the UK had also adhered in an informal way before the recession, limited budget deficits to 3% of GDP and a nation's debt to 60% of GDP. Such constraints were often far exceeded and increasing concerns were being expressed. In May 2010, the new UK Government became a prominent voice within Europe for a reversal of fiscal policy, with public spending cuts and tax increases.

The UK Government's policy was given some support by the economic crisis unfolding in Greece, a member of the eurozone. The Greek Government needed to be 'bailed out' by fellow member states if it was not to default on its debts. It had a budget deficit of 14% of GDP and a national debt of 115% of GDP in 2009, a year when its GDP also fell by 2%.

There was concern in the EU that such a situation had been allowed to develop, with increasing calls for EU-wide controls. France and Germany were pressing for an EU institution such as the European Commission to provide such a role, with the power to impose an EU-wide fiscal policy on all member states and not just the eurozone.

The UK Government opposed any such powers over member countries. However, it had gone as far as to establish an Office for Budget Responsibility (OBR), intended to keep the Government's tax and spending plans under control by providing a reality check on the state of the nation's finances. The OBR, however, does not have the powers that some were envisaging for the EU.

In a climate of greater stability in 2010, some still believed that an EU-wide fiscal policy needed to be a key part of the evolution towards a federal state. It cannot be denied that the best way forward must be that which delivers macroeconomic stability across the EU. Whether this comes about through member governments each developing a policy of fiscal responsibility or through a fiscal policy imposed by the EU on all member states remains open to debate.

19. **The Global Context Extract B** (lines 2−3) states that 'India's economic success could help to bring some relief to the UK economy and speed the recovery process through increased exports'.

Using the data and your economic knowledge, assess the importance to the UK economy of continued economic growth in India.

[25 marks]

STEMUP.CO.UK

20. THE GLOBAL CONTEXT

Extract B: A passage to India

In July 2010, the UK Prime Minister led a Government delegation to India. The hope was that India's economic success could help to bring some relief to the UK economy and speed the recovery process through increased exports.

India's growth in 2010 is expected to be about 9%. Its GDP per capita is $3100, although over 400 million Indians live below the international poverty line of $1.25 per day. It has a labour force of almost 500 million but an official rate of unemployment of 11%. Quarterly sector growth is impressive: 1.8% in services, 2.2% in manufacturing and 1.7% in agriculture between January and March 2010.

For the Indian Government, inflation and economic growth are top of the agenda. Unfortunately, there is often a trade-off between these two macroeconomic indicators. Inflation jumped from 1.3% in October 2009 to almost 5% in November 2009. However, food inflation was 19%. As in other countries, rising oil costs are also amongst the causes of inflation for the Indian economy.

The UK Government still hopes to promote increased UK economic involvement in India. Certainly Indian business has become more involved in the UK. *Tata*, one of India's oldest companies, is now the UK's leading manufacturer through its ownership of *Corus Steel and Jaguar Land Rover*. India is now more likely to be creating jobs in the UK through direct investment rather than 'stealing' them, for example through call-centre activity relocated from the UK. UK business needs to rise to the challenges and opportunities presented in India. Companies such as *Vodafone* (telecommunications) and *BAE Systems* (defence and aerospace) are amongst the recent success stories and it is widely believed that India's increased demand for world-class services, for example financial and legal, can be met by the UK.

Infrastructure investment is urgent. Each year, about 40% of India's agricultural produce rots before arriving at market because of inadequate storage facilities and poor road and rail links. The Indian Government's plans to spend $500bn between 2010 and 2013 on new ports, roads, rail links and airports will help to improve the situation. This investment is an export opportunity for UK firms specialising in infrastructure projects. The growth of the Indian economy will also help UK service exporters such as banking, education and health-care businesses. Currently, India accounts for only 1% of UK exports.

However, India remains fiercely protective, and investment and trade flows from the UK could remain limited. Progress will depend on whether a long-awaited EU-India trade deal becomes a reality and on the outcome of the *World Trade Organization's* global trade talks. Many argue that India can only benefit from increased international trade.

The UK Government said at the time of the Prime Minister's July 2010 visit to India that the UK had a vital stake in India's rise to becoming a global power and in its future prosperity. At the same time, a view was also expressed that the UK needs India much more than India needs the UK. It is hoped that all aspects of the UK's macroeconomy can eventually benefit as India develops further.

23.

THE GLOBAL CONTEXT

Extract B: A decade of change, challenge and opportunity

This year, ten years will have passed since the downfall of Saddam Hussein in Iraq. Over these years the Middle East and North African countries (MENA) have continued to witness economic and political instability, culminating in the recent so-called 'Arab Spring' uprisings in countries such as Egypt, Libya and Syria.

The *Organisation for Economic Cooperation and Development (OECD)* distinguishes two groups within the MENA region. The resource-rich economies, such as Iraq, Saudi Arabia and Dubai, are recognised as being different from those seen as resource-deficient, such as Egypt and Jordan. For both groups, however, and despite the political problems for some, the OECD is optimistic about future growth.

The OECD argues that, as the global economy recovers, demand for goods and services from European and emerging markets in particular will encourage development of MENA's manufacturing and service sectors. Just as the UK, for example, enjoys a comparative advantage in financial services, some MENA economies are now developing attractively priced manufactured goods. Tourism is also ripe for further development.

However, although the OECD points to economic progress having been made, recent years have highlighted challenges which need to be faced in the MENA economies if there is to be further progress. Improvements in labour productivity and hence competitiveness are essential for increased trade with the rest of the world. More foreign investment in infrastructure and manufacturing plant is desperately needed, with advanced countries such as the UK having a role to play here. Unemployment remains persistently high in some MENA countries, as does inflation.

Jordan is beginning to show what can be done to bring about a more successful economy. Through productivity improvements, it is now one of the most competitive MENA countries. This has helped it to negotiate a number of significant free trade agreements, including those with the EU and the US. Exports have brought increased economic growth to Jordan, as has domestic investment.

One of the benefits of economic success can be a higher standard of living. The Human Development Index (HDI) allows international comparisons of living standards. The Arab states of the Middle East have seen an improvement in the index from 0.444 in 1980 to 0.641 in 2011. The latter figure can be compared with 0.862 for the UK.

Income per head, access to healthcare and education, life expectancy, the quality of the environment and a fair distribution of income are key factors in any assessment of living standards. The UK and other developed countries need to remember that higher living standards can mean bigger markets for goods and services.

In many of the MENA economies, there is still much to be done to achieve sustained economic success. But, where Jordan leads, others will begin to follow. To do so would see a significant strengthening of MENA's economic importance in the global economy.

25. Globalisation and outsourcing of manufacturing provides several potential benefits to economies. However, some countries, such as the UK, continue to suffer persistent trade deficits but are unable to resort to import controls.

Assess the view that, for the UK, the economic benefits of globalisation outweigh the costs.

[25 marks]

26. **The Global Context Extract C** (lines 9–11) states: 'However, the tax summaries have been heavily criticised in that they may make individuals more inclined to support political parties which favour lower taxes, without considering the wider picture of what state spending provides.'

Using the data and your knowledge of economics, to what extent do you agree that cuts to direct taxation would benefit growth **and** living standards in the UK?
Justify your answer.

[25 marks]

27. **THE EUROPEAN UNION CONTEXT**

Extract E: Would the UK be left out in the cold by saying goodbye to the EU?

In recent years, growing disenchantment with the EU has led to calls for the UK to leave the organisation. Supporters and opponents of UK membership have presented coherent arguments.

A study by the so-called Bruges Group, which opposes the EU, estimated the annual cost of UK membership to be £65bn. This included an estimated cost to businesses of £28bn to comply with EU regulations and an annual net contribution to the EU Budget of £14.6bn. A member of the EU Commission in 2011 estimated that the Common Agricultural Policy (CAP) causes the UK consumer to pay up to three times as much for food than if the CAP did not exist. The common external tariff raises prices of imports into the EU, including the prices of consumer goods and resources used by businesses. It also protects inefficient, high-cost EU producers.

Those supporting UK membership point, for example, to the 3.5 million UK jobs created from trade with the EU, either within the export sector or, more widely, through the operation of an export-led multiplier. The Single European Market has helped trade creation and has allowed EU labour to move to the UK, to the benefit of UK businesses. Despite not being in the eurozone, the UK has continued to attract a large share of the world's investment funds so that it is now the third largest recipient internationally. It is claimed that a large part of this is due to EU membership. The EU as a whole has also exerted much greater influence than could any individual EU country in negotiations to further global free trade. One business organisation has argued that non-membership would be like 'sitting outside in the corridors rather than at the decision table'.

Sources: various, 2012

28. **The European Union Context Extract F** (line 1) states: 'Deflation is the new economic menace threatening European economies including the UK.'

Using the data and your knowledge of economics, evaluate the view that deflation in the EU's economies would inevitably be damaging to the UK's macroeconomic performance.

[25 marks]

STEMUP.CO.UK

29. THE EUROPEAN UNION CONTEXT

Extract F: Is deflation a bad thing?

Deflation is the new economic menace threatening European economies including the UK. In the Eurozone in particular, the European Central Bank is considering the use of quantitative easing to help avoid deflation; but why is it such a problem? Firstly, there is the argument that deflation delays spending. However, this does not relate to all forms of consumption. Another reason is the effect on debtors. Prices and perhaps incomes may fall, but the real value of debt increases. For firms experiencing falling revenues, and households with declining incomes, debt repayments become more of a burden. Governments can be caught in the same trap, because if prices and incomes fall, so does tax revenue.

There is an alternative view that moderate deflation is not a bad thing, especially if it is the result of innovation that reduces production costs. Also, some comfort is to be had from falling or barely rising prices as this goes some way to improve competitiveness. Some of the Eurozone's economies desperately need to become more competitive and they need to either reduce costs or increase productivity. However, falling prices deter investment, which makes productivity improvements far more difficult.

Source: news reports, 2014

30. THE GLOBAL CONTEXT

Extract C: Where does tax go in the UK?

In the UK, from November 2014, HM Revenue & Customs will begin sending 24 million working people the first Annual Tax Summary, showing how their money is being spent by the state, in order to make taxation more transparent. For example, someone on a salary of £30 000 will see that £1663 of their money is spent on welfare, with £1280 going to health, £892 going to education, £822 going to the state pension and £475 going on national debt interest. Ministers believed that showing exactly where taxpayers' money goes could make voters more receptive to controversial Government changes to the benefits system.

However, the tax summaries have been heavily criticised in that they may make individuals more inclined to support political parties which favour lower taxes, without considering the wider picture of what state spending provides. The breakdown does not make clear that most of the welfare budget goes to pensioners, the sick and disabled people. The Treasury originally planned to show just 3% went towards unemployment benefits while much larger amounts went to children and families, elderly people and those unable to work, but this has been left off the tax summaries.

A Labour Party spokesperson said: 'This government's record on tax is giving millionaires a huge tax cut while everyone else pays more.' She added: 'Families and pensioners are paying more in higher VAT, but that tax isn't included in these tax summaries and independent figures from the Institute of Fiscal Studies show that, by next year, families will be £974 a year worse off because of tax and benefit changes since 2010.'

[25 marks]

3.

THE EUROPEAN UNION CONTEXT

Extract F: Ireland emerges from bailout

Whilst many of the Eurozone members still face instability in their own economies, Ireland became the first economy to emerge from its bailout since the Eurozone crisis began. In its final report on Ireland's progress under the rescue scheme, the European Commission said: 'With public sector debt at 122% of GDP in 2013, Ireland needs to continue with its fiscal reduction programmes, reduce private-sector debt and improve bank profitability to revive lending.'

Of the UK's top ten European trading partners, Ireland is the only one with which the UK has a current account surplus. The importance of trade with Ireland is therefore of great significance. The Irish and UK economies are highly integrated and it is not yet clear how further cuts in Ireland might impact on the UK's macroeconomic performance.

Public sector debt across many European nations is still at very dangerous levels and Ireland's debt to GDP ratio is the second highest in the EU. Higher national debts may lead to problems such as crowding out, where private sector investment is reduced due to increased public sector borrowing. The EU introduced the Stability and Growth Pact (limiting total debt as a percentage of GDP to 60% and annual deficits to 3% of GDP) in order to prevent individual economies from creating instability across the EU. However, EU member countries have struggled to keep to the pact, with only four member countries not breaking the rules. Both Ireland and the UK have breached the pact since 2008. No doubt more problems lie ahead for the Eurozone.

THE EUROPEAN UNION CONTEXT

Extract E: The French economy faces problems

The International Monetary Fund (IMF) has warned the French government that, unless it makes major economic reforms to lower its labour costs and avoid tax rises, the economy is likely to experience reduced growth. This view was echoed in a recent survey of bankers, in which France was identified as the most serious threat to Europe's recovery from the debt crisis which has crippled growth and driven unemployment to record highs. The outlook for France, the Eurozone's second largest economy, is more worrying than that for Italy, Spain or Germany.

The Chief Executive officer of the Institute of International Finance said: 'There's a lack of concern about international competitiveness in France.' French President, François Hollande, is failing to revive business investment in the face of one of the world's highest tax burdens. Such investment could generate greater efficiency and higher productivity, especially important if the euro's exchange rate does not always work in France's favour.

An IMF spokesperson, Edward Gardner, also said that French unemployment, which currently stands at 11%, would continue to rise, despite President Hollande's vow to reduce it by the end of the year. 'It reflects in large part a general phenomenon in Europe that the recovery is slower in coming than we had expected.' The euro area's recovery almost came to a halt as the French economy unexpectedly shrank and German growth slowed.

The failure of the French economy to improve is in contrast to the overall success of the German economy and the stronger signs of recovery in the UK. President Hollande now faces difficult choices in reducing government spending to reach European budget deficit commitments. Furthermore, a recent announcement that VAT will rise, despite previous claims that there would be no significant tax rises, may cause further problems for the economy.

9.

THE GLOBAL CONTEXT

Extract C: Incentives and economic performance

Could inequality be adversely affecting economic performance? According to some economists, capitalism is not working effectively. Reducing trade union power and creating more flexible labour markets have created greater income inequality. Successive governments have also reduced taxation on companies and high earners (such as the cut in income tax for those earning over £150 000 from 50% to 45%) in order to promote incentives and wealth generation, as well as focusing much of the UK's hopes on the financial services industry. These policies, however, have created greater divides in terms of the 'haves' and 'have nots' which may have consequences for the UK's macroeconomic performance.

There has been a shift, over the last generation, in the share of GDP from the workforce to shareholders of between 5% −7%, with many low earners finding it difficult to get onto the property ladder. Neo-classical economists cite the trickle-down effect as a way of improving the living standards of all by cutting taxes for upper income groups and business, stating that economic progress depends on saving and innovation which, in turn, depends on the ability to make high profits. However, research by the Tax Justice Network claims that, when there are high levels of inequality, to avoid tax, financial capital often leaves the country, rather than staying in the domestic economy.

It has been argued that other policies such as public sector pay rise limits of 1%, benefits rising at 1% rather than inflation-linked increases, and the removal of some housing benefit, as well as the culture of bankers' bonuses, have all contributed to growing inequality. This is likely to have consequences for consumer spending power, but may also help to contribute to reduced inflationary expectations. There has also been criticism of the UK banking system, in that it has been too focused on making quick financial returns rather than long-run investment. Ultimately, these factors may damage the UK's ability to achieve its macroeconomic targets.

Economic growth and development in Africa

Extract C: Problems in Africa

Many African countries should continue to enjoy strong economic growth and attract investment, especially in oil, natural gas and minerals. In some areas this has been accompanied by a decline in labour unrest. As a result of this economic change, living standards in Africa should improve. However, some parts, noticeably north and central Africa, continue to suffer from political instability and civil war.

Africa's recent growth has been driven by the increasing production and export of commodities but it remains far below the continent's potential for growth. Meaningful job creation is weak and is not tackling the high rates of poverty in many countries. The informal sector is still large and opportunities remain limited for many seeking to enter the labour market. Continual pressure on labour markets from a steady stream of new entrants due to population growth has also meant that economic growth rates have not impacted strongly on poverty and inequality.

When governments squander valuable natural resources, geographic advantages do not always result in sound development, while land-locked African countries often struggle to trade with global economies.

Heavy dependence on minerals and agriculture has led to weak job creation in areas such as construction, transport and telecommunications. Political unrest continues to pose a significant threat to economic activity and a reliance on agriculture leaves many countries prone to weather-related shocks.

Brazil: The Hot 'BRIC'

Extract D: News report – Is Brazil in trouble?

In June 2013, more than a million citizens across Brazil took to the streets to protest against political corruption, poor healthcare, inadequate schools, substandard public transport and crumbling infrastructure. This is in a country which is reported to be spending $13.3 billion to host the 2014 World Cup and $18 billion to host the 2016 Olympic Games.

In February 2014, the Brazilian currency, the real, is also making the headlines. In recent months it has collapsed against the pound. A year ago, visitors to Brazil would have got 2.70 real for £1 but now the rate stands at 3.61 to the pound. The fall in the value of the real is in response to a widening budget deficit and fears that the government's credit rating will be reduced. In response, the central bank has raised its base interest rate to 10.75%.

13.

In 2013 Ethiopia had a relatively high real GDP growth rate of 7% but only 42% of its population had access to improved water sources and life expectancy was only 63 years.

Using examples to illustrate your answer, explain the difference between economic growth and economic development.

Brazil: The Hot 'BRIC'

Extract C: How does Brazil compare with the UK?

Selected data for the UK and Brazil (2013 unless otherwise stated)

	UK	Brazil
GDP (PPP)	$2.39 trillion	$2.42 trillion
Real GDP per head (PPP)	$36,600	$12,100
Real GDP growth per capita (2000–2012)	1.14% per annum	2.27% per annum
Average growth (2000–2012)	1.72% per annum	3.41% per annum
Human Development Index (HDI)	0.875 (World ranking 26)	0.730 (World ranking 85)
Unemployment	7.7%	5.5%
Inflation	2.7%	6.2%
Current account of the balance of payments (%GDP)	–2.41%	–3.83%
Public sector debt (%GDP)	91.1%	59.2%
Budget balance (%GDP)	–7.4%	+1.6%
Industry %GDP	20.5%	26.4%
Services %GDP	78.9%	68.1%
Gini coefficient	34.0	54.7
Share of income of the poorest 10% of the population	2.1%	0.8%
Share of income of the richest 10% of the population	28.5%	42.9%
Years of schooling	16 yrs	14 yrs
Literacy rate	99%	90.4%
Life expectancy	80.3 yrs	73.0 yrs
Infant mortality rate	4.5 per thousand live births	19.8 per thousand live births
Population	63.4 million	201.0 million

Population, % over 65	17.3%	7.3%
Population, % under 15	17.3%	24.2%

Brazil: The Hot ‘BRIC’

Extract B: Brazilian economy

Brazil has a mixed economy with abundant natural resources. It has been the world's largest producer of coffee for the last 100 years and it will shortly become one of the world's top ten oil producers. Brazil also has a strong manufacturing sector. For example, it is a likely source of the A4 paper you use in your printer, and its Bandeirante Corporation has long competed with aerospace giants as a world-class manufacturer in the niche market of short-haul commuter aircraft. By value, it ranks as the 23rd largest exporter in the world. However, the discovery of oil off the coast of Brazil has led to an appreciating currency; this makes life more difficult for domestic manufacturers.

Brazil is the world's fifth largest country by both population and total area. It has grown rapidly over the last thirty years and is now the world's seventh largest economy. It has the fourth largest car market in the world. From 1980 to 2011, Brazil's Human Development Index increased by 30.8%. However, Brazil is also well known for its inequality, and there is much rural and urban poverty. Many of its large cities contain crowded and deprived slum districts known as favelas. Brazil's health care system ranks 125th out of 190 countries.

Brazil currently dominates Foreign Direct Investment (FDI) into Latin America and in 2011 it attracted about one third of all the FDI into the region. FDI creates jobs and contributes to improvements in human capital as foreign companies often invest in their workforce. New investment has a multiplier effect and the resultant growth in GDP generates higher tax revenues for the Brazilian Government. However, there are also the environmental effects to consider. Many overseas companies that are located in Brazil export part of their output but some of their profits are sent abroad.

Brazil: The Hot ‘BRIC’

Extract A: Who are the BRICs?

The BRIC label was first coined by the investment bank Goldman Sachs and refers to a group of four large developing countries (Brazil, Russia, India and China), distinguished from other promising emerging markets by their potential to rank among the world's largest and most influential economies by the mid-21st century. Their potential is largely due to their natural resources, the size and structure of their population, their attitudes to investment and trade, and their capacity for technological progress. The four BRIC economies have a combined population of over 2.8 billion, about 40% of the world's population. They also produce more than a quarter of the world's output.

Analysts have suggested that, to enable a country to realise its potential for growth, there is a number of conditions that need to be met. These include:

- a suitable level of human capital, for example, in relation to education, inequality and life expectancy
- a stable macroeconomic environment, for example, as reflected in indicators of inflation, growth and government borrowing
- access to current technologies such as the Internet and mobile communications
- a stable political environment including the rule of law and the absence of widespread corruption.

17. The UK has seen significant changes in its pattern of trade with the rest of the world in terms of what we trade and with whom. The UK’s current account deficit widened from £29.1bn in 2011 to £100.2bn in 2015. The deficit in 2015 was 5.4% of GDP, the largest annual deficit as a percentage of GDP since records began in 1948.

Explain the possible reasons for changes in the pattern of trade between the UK and the rest of the world.

[15 marks]

18. **Extract C** (lines 2–3) states ‘More recently, India has begun to use more market-based strategies to help its development, including liberalising trade and privatisation.’

Using the data in the extracts and your knowledge of economics, evaluate the view that greater use of market-based strategies is the best way to improve the economic development of India.

[25 marks]

19. **Extract B** (lines 17–19) states ‘India still protects its economy with anti-dumping measures and export subsidies that are designed to promote economic growth.’

With the help of a diagram, explain how export subsidies may help promote economic growth in India.
