# These questions belong to AQA, not to us.

The examination questions, mark schemes and examiner comments in this pack were written and published by AQA. They are past assessment materials, reproduced here so that students can revise from them.

## What we do not own

STEMUP is not affiliated with AQA and does not own, and makes no claim to own, any of the question, mark scheme or examiner report material in this pack. AQA has not endorsed, approved or been involved in the production of it. AQA and the qualification titles used here belong to their respective owners and appear for identification only.

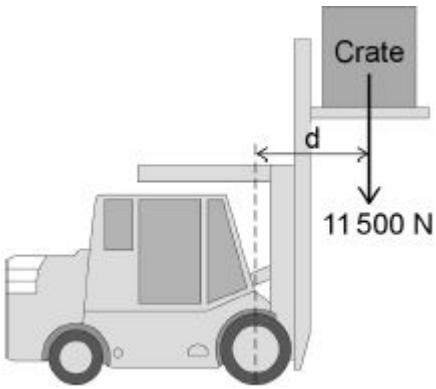

## Where to find the originals

AQA publishes its past papers, mark schemes and examiner reports. Always check the current specification at aqa.org.uk before you revise, because content and wording can change between series.

If you hold the rights to any material in this pack and would like it amended or removed, contact admin@stemup.co.uk and we will act on it.

## Q1.

The diagram below shows a fork-lift truck lifting a heavy crate.

(a) The crate weighs 11 500 N and is lifted vertically 2.60 m.

Calculate the work done to lift the crate.

Use the equation:

work done = force × distance

_____

_____

_____

Work done = _____ J

**(2)**

The weight of the crate causes a clockwise moment of 13 800 Nm about the centre of the front wheel of the fork-lift truck.

(b) The weight of the fork-lift truck and driver cause an anticlockwise moment.

What is the minimum size of the anticlockwise moment needed so that the fork-lift truck does **not** topple over?

_____

**(1)**

(c) Write down the equation which links distance, force and moment of a force.

_____

**(1)**

(d) Calculate the distance '**d**' marked on the diagram above.

_____

_____

_____

STEMUP.CO.UK

Distance '**d**' = _____ m

**(3)**

**(Total 7 marks)**

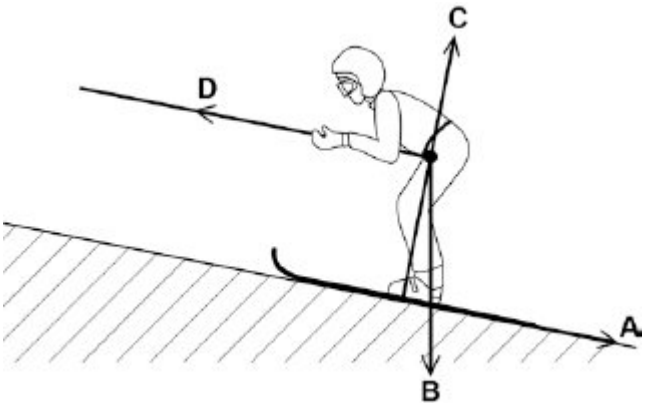

## Q2.

**Figure 1** shows a skier using a drag lift.

The drag lift pulls the skier from the bottom to the top of a ski slope.

The arrows, **A**, **B**, **C** and **D** represent the forces acting on the skier and her skis.

**Figure 1**

(a) Which arrow represents the force pulling the skier up the slope?

Tick **one** box.

**A** ☐

**B** ☐

**C** ☐

**D** ☐

**(1)**

(b) Which arrow represents the normal contact force?

Tick **one** box.

**A** ☐

**B** ☐

STEMUP.CO.UK

**C** ☐

**D** ☐

**(1)**

(c) The drag lift pulls the skier with a constant resultant force of 300N for a distance of 45 m.

Use the following equation to calculate the work done to pull the skier up the slope.

work done = force × distance

_____

_____

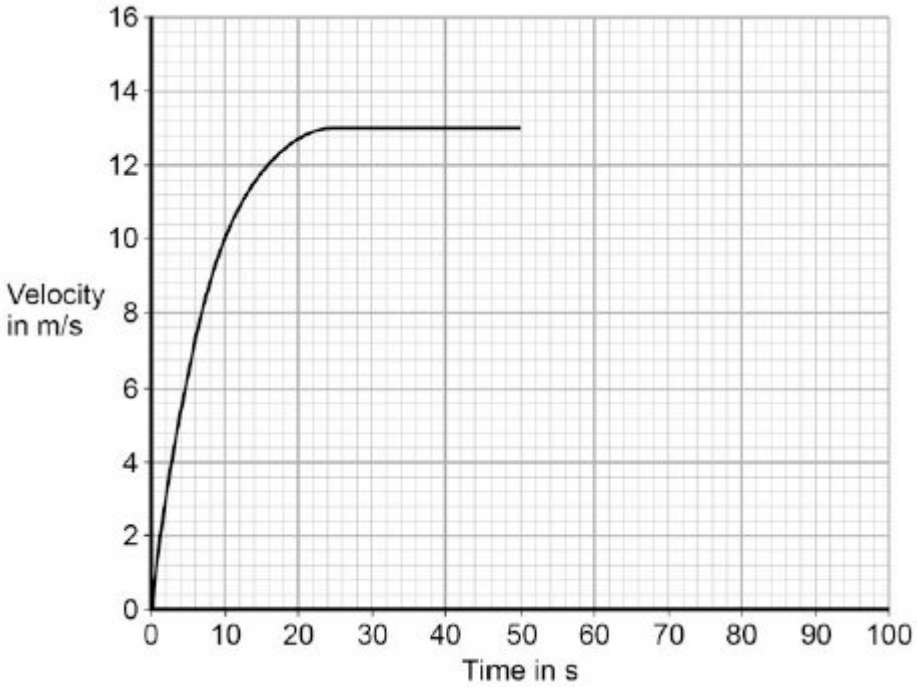

Work done = _____ J

**(2)**

(d) At the top of the slope the skier leaves the drag lift and skis back to the bottom of the slope.

**Figure 2** shows how the velocity of the skier changes with time as the skier moves down the slope.

**Figure 2**

After 50 seconds the skier starts to slow down.

The skier decelerates at a constant rate coming to a stop in 15 seconds.

Draw a line on **Figure 2** to show the change in velocity of the skier as she slows down and comes to a stop.

STEMUP.CO.UK

**(2)**
**(Total 6 marks)**

## Q3.

The stopping distance of a car is the sum of the thinking distance and the braking distance.

The table below shows how the thinking distance and braking distance vary with speed.

| Speed in m/s | Thinking distance in m | Braking distance in m |
|---|---|---|
| 10 | 6 | 6.0 |
| 15 | 9 | 13.5 |
| 20 | 12 | 24.0 |
| 25 | 15 | 37.5 |
| 30 | 18 | 54.0 |

(a) What is meant by the braking distance of a vehicle?

_____

_____

**(1)**

(b) The data in the table above refers to a car in good mechanical condition driven by an alert driver.

Explain why the stopping distance of the car increases if the driver is very tired.

_____

_____

_____

_____

**(2)**

(c) A student looks at the data in the table above and writes the following:

thinking distance $\propto$ speed

braking distance $\propto$ speed

Explain whether the student is correct.

STEMUP.CO.UK

_____

_____

_____

_____

**(2)**

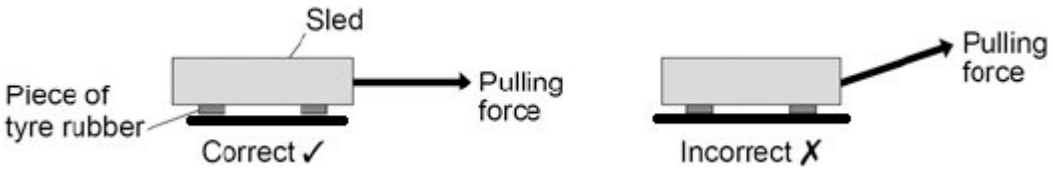

(d) Applying the brakes with too much force can cause a car to skid.

The distance a car skids before stopping depends on the friction between the road surface and the car tyres and also the speed of the car.

Friction can be investigated by pulling a device called a 'sled' across a surface at constant speed.

The figure below shows a sled being pulled correctly and incorrectly across a surface.

The constant of friction for the surface is calculated from the value of the force pulling the sled and the weight of the sled.

Why is it important that the sled is pulled at a constant speed?

Tick **one** box.

If the sled accelerates it will be difficult to control. ☐

If the sled accelerates the value for the constant of friction will be wrong. ☐

If the sled accelerates the normal contact force will change. ☐

**(1)**

(e) If the sled is pulled at an angle to the surface the value calculated for the constant of friction would not be appropriate.

Explain why.

_____

_____

_____

_____

**(2)**

STEMUP.CO.UK

(f) By measuring the length of the skid marks, an accident investigator determines that the distance a car travelled between the brakes being applied and stopping was 22 m.

The investigator used a sled to determine the friction. The investigator then calculated that the car decelerated at 7.2 $m/s^2$.

Calculate the speed of the car just before the brakes were applied.

Give your answer to two significant figures.

Use the correct equation from the Physics Equation Sheet.

_____

_____

_____

_____

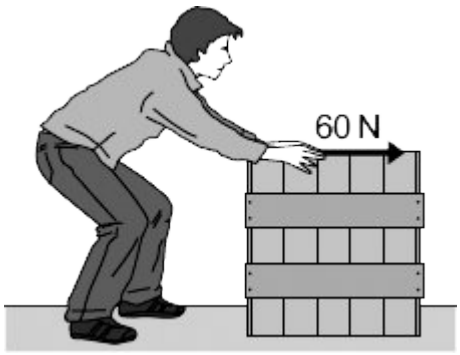

Speed = _____ m/s

**(3)**

**(Total 11 marks)**

## Q4.

The diagram shows a worker using a constant force of 60 N to push a crate across the floor.

My Revision Notes AQA GCSE Physics for A* – C,
Steve Witney, © Philip Allan UK

(a) The crate moves at a constant speed in a straight line

(i) Draw an arrow on the diagram to show the direction of the friction force acting on the moving crate.

**(1)**

(ii) State the size of the friction force acting on the moving crate.

_____ N

Give the reason for your answer.

_____

STEMUP.CO.UK

_____

**(2)**

(b) Calculate the work done by the worker to push the crate 28 metres.

Show clearly how you work out your answer and give the unit.

Choose the unit from the list below.

**joule** **newton** **watt**

_____

_____

Work done = _____

**(3)**

**(Total 6 marks)**
