SFM21

[SFM21]
TUESDAY 23 MAY, AFTERNOON

TIME

1 hour 30 minutes.

INSTRUCTIONS TO CANDIDATES

Write your Centre Number and Candidate Number on the Answer Booklet provided and on the Section D Supplementary Booklet (if applicable).
You must answer **all** questions from sections A and B **or** A and C **or** A and D **or** C and D.
You should spend equal time on each of the two sections.
Candidates taking Section D should use the insert provided and attach to your Answer Booklet using the treasury tag provided.
Show clearly the full development of your answers.
Answers should be given to three significant figures unless otherwise stated.
You are permitted to use a graphic or scientific calculator in this paper.

INFORMATION FOR CANDIDATES

The total mark for this paper is 100.
The total mark for each section of this paper is 50.
Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.
Answers should include diagrams where appropriate and marks may be awarded for them.
Take $g = 9.8\,\text{m}\,\text{s}^{-2}$, unless specified otherwise.
A copy of the **Mathematical Formulae and Tables booklet** is provided.
Throughout the paper the logarithmic notation used is $\ln z$ where it is noted that $\ln z \equiv \log_e z$

SECTION A Mechanics 1

Answer all five questions in this section.

1 A particle P of mass 8 kg is projected with velocity u m s^{-1} up the line of greatest slope of a rough inclined plane, as shown in **Fig. 1** below.

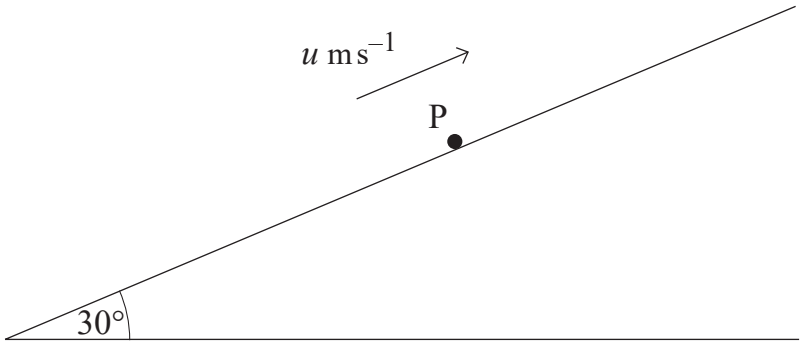

Fig. 1

The coefficient of friction between P and the surface of the plane is $\frac{\sqrt{3}}{6}$

The plane is inclined at 30° to the horizontal.

P moves a distance of 0.3 m up the plane before coming to rest.

Using work and energy considerations, find the value of u. [9]

2 **(a)** A particle Q is moving along a horizontal line through O.

The distance from O to Q is x metres.

A variable force, H newtons, acts on Q where

$$H = 4x - \frac{56}{x^2}$$

Find the work done by H as the particle Q moves from $x = 4$ to $x = 7$ [4]

(b) A particle P of mass 1 kg moves under the action of two forces **F** and **G** newtons

$$\mathbf{F} = \begin{pmatrix} 5 \\ 2 \\ 8 \end{pmatrix} \quad \text{and} \quad \mathbf{G} = \begin{pmatrix} -1 + \lambda \\ 2 - 2\lambda \\ 3 + 3\lambda \end{pmatrix}$$

from a point A to a point B where

$$\overrightarrow{\text{OA}} = \begin{pmatrix} 2 \\ 3 \\ 5 \end{pmatrix} \text{m} \quad \text{and} \quad \overrightarrow{\text{OB}} = \begin{pmatrix} 8 \\ 7 \\ 6 \end{pmatrix} \text{m}$$

(i) Find, in terms of λ, the work done by the resultant force as the particle moves from A to B. [4]

The speed of P changes from 11 m s^{-1} at A to 15 m s^{-1} at B.

(ii) Hence find the value of λ. [2]

3 The vertical fountain in Granny's pond is 0.75 m tall as shown in **Fig. 2** below.

The fountain's pump lifts still water through a pipe to the top of the fountain where it is moving at $1.2\,\text{m}\,\text{s}^{-1}$

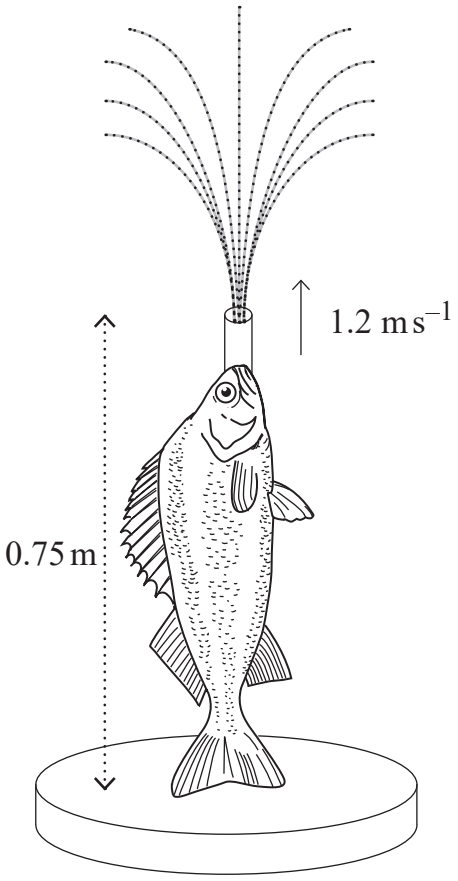

Fig. 2

The pipe has a circular cross-section with diameter of 0.02 m.

The density of water is $1000\,\text{kg}\,\text{m}^{-3}$

Find the effective power of the fountain's pump. [8]

4 A particle P has mass m kg.

It is attached to two fixed points A and B in the same vertical line by means of two light inextensible strings, of equal length, each inclined at $\alpha°$ to the vertical.

P executes horizontal circles, centre C, of radius r m, with velocity v m s^{-1}, as shown in **Fig. 3** below.

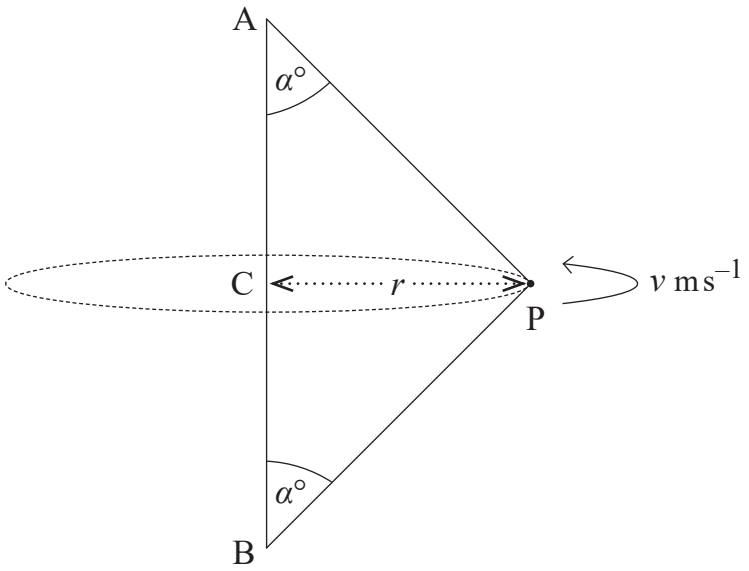

Fig. 3

Let the tension in AP be T_1 newtons and the tension in BP be T_2 newtons.

(i) Show that

$$T_1 = T_2 + \frac{mg}{\cos\alpha}$$ [2]

(ii) Show that

$$T_1 + T_2 = \frac{mv^2}{r\sin\alpha}$$ [3]

(iii) Using **(i)** and **(ii)**, deduce that

$$T_2 = \frac{m}{2}\left(\frac{v^2}{r\sin\alpha} - \frac{g}{\cos\alpha}\right)$$ [2]

(iv) Hence deduce that the minimum velocity with which P can move in such a circle is given by

$$v = \sqrt{rg\tan\alpha}$$ [2]

5 A block of mass $5m$ kg rests on a rough, horizontal plane at point P.

The coefficient of friction between the block and the plane is $\mu = \frac{1}{9}$

The block is attached to a light elastic string with natural length 0.18 m and modulus of elasticity λ newtons.

The string passes over a smooth fixed pulley at point A, 0.02 m from P and is attached to a fixed point B, 0.18 m from P.

A and B lie on the same horizontal level as the block.

A smooth ring of mass m kg is threaded onto the string and is held at rest at the mid-point of AB as shown in **Fig. 4** below.

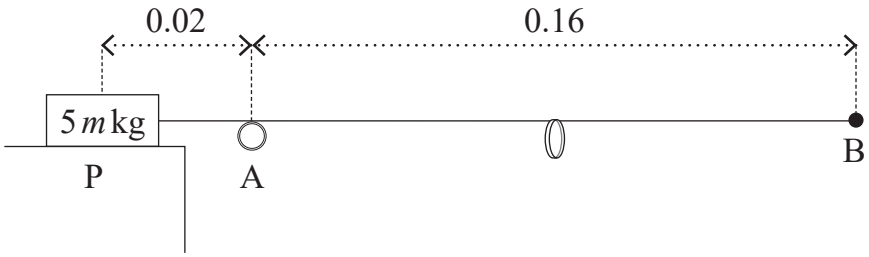

Fig. 4

The ring is released from rest and falls 0.15 m vertically to the point C where it is moving at v m s^{-1}, as shown in **Fig. 5** below.

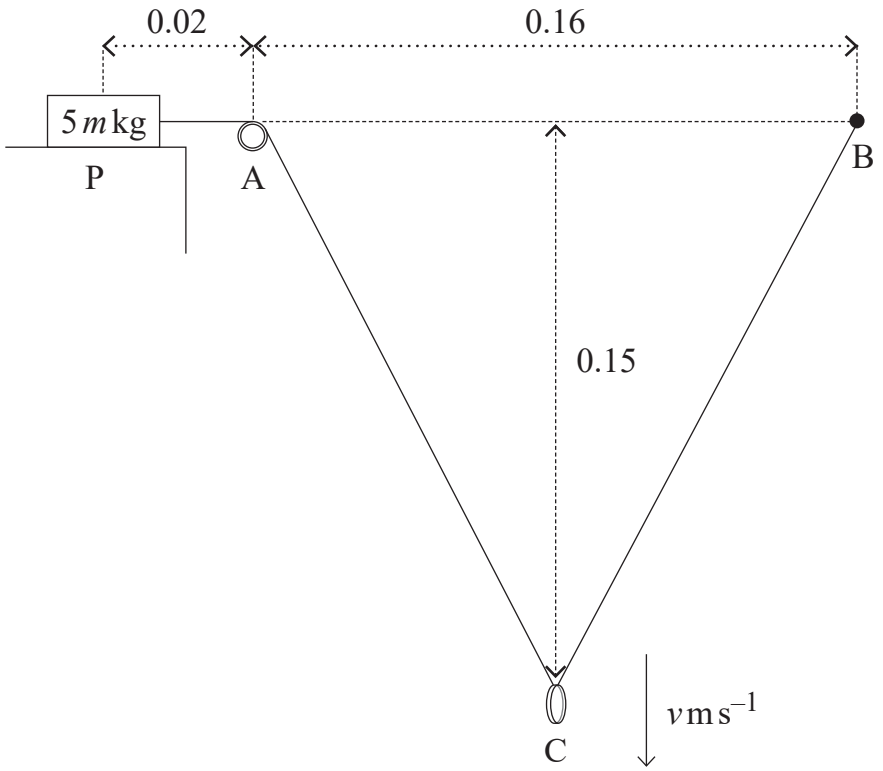

Fig. 5

The block is on the point of moving.

Model the block and the ring as particles.

(Note that the ring can slide freely along the string.)

(i) By considering the forces acting on the block at the instant when the ring is at C,

show that $\lambda = \frac{5}{9} mg$ [6]

(ii) Using the Principle of Conservation of Mechanical Energy, show that $v = 1.4$ [8]

SECTION B Mechanics 2

Answer all five questions in this section.

1 A rollercoaster designer is planning a vertical circular loop in a track as shown in **Fig. 1** below.

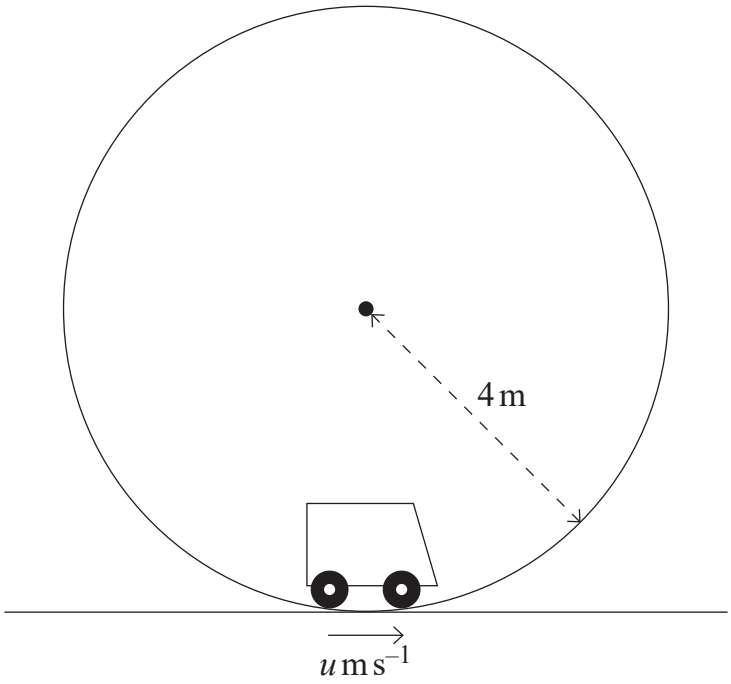

Fig. 1

The engineless car is moving with velocity u m s^{-1} at the lowest point in the loop.

A typical car including passengers has a combined mass of 1120 kg.

The car must travel along the track and around the inside of the loop without losing contact.

As a safety measure, the downward normal reaction exerted by the track on the car at the highest point must be greater than or equal to 2500 N.

The radius of the loop is 4 m.

Model the car and passengers as a particle and the track as smooth.

(i) Find the velocity of the car at the top of the loop when the normal reaction is 2500 N. [4]

(ii) Hence find the least possible value of u for the safety requirement to be satisfied. [4]

2 A satellite of mass m kg at rest on the earth's surface has weight mg newtons.

The mass of the earth is M kg and its radius is R metres.

(i) Find an expression for the Universal Gravitational Constant G in terms of M, R and g. [2]

The satellite orbits the earth in a circular orbit around the equator travelling at 7200 m s^{-1}

(ii) If $R = 6.37 \times 10^6$, find the height of this orbit above the earth's surface. [4]

3 When liquid rises up a capillary tube, the height it reaches is given by the equation

$$h = \frac{2S}{\rho g a}$$

where S is the surface tension of the liquid,
ρ is the density of the liquid,
g is the acceleration due to gravity and
a is the radius of the capillary tube.

(i) Find the dimensions of surface tension, S, given that density has dimensions ML^{-3} [3]

Liquid resting on a horizontal surface forms bubbles of depth y, where y is given by the relationship

$$y = k\rho^{\alpha} g^{\beta} S^{\gamma}$$

where k is a dimensionless constant.

(ii) Find α, β and γ using the Method of Dimensions. [7]

Two liquids L_0 and L_1 form bubbles of depth y_0 and y_1 respectively.

The density of L_1 is 60% less than that of L_0

The surface tension of L_1 is 37.5% less than that of L_0

(iii) Find y_1 in terms of y_0 [3]

4 An aeroplane flies a return trip from Belfast City Airport (BHD) to London Heathrow (LHR).

LHR is 513 km from BHD.

The flight from BHD to LHR happens in still air and takes one hour and five minutes.

(i) Find the speed of the aeroplane in km h^{-1} in still air. [2]

LHR is on a bearing of 120° from BHD.

During the return journey from LHR to BHD, a wind blows from a bearing of 280° at 41 km h^{-1} as shown in **Fig. 2** below.

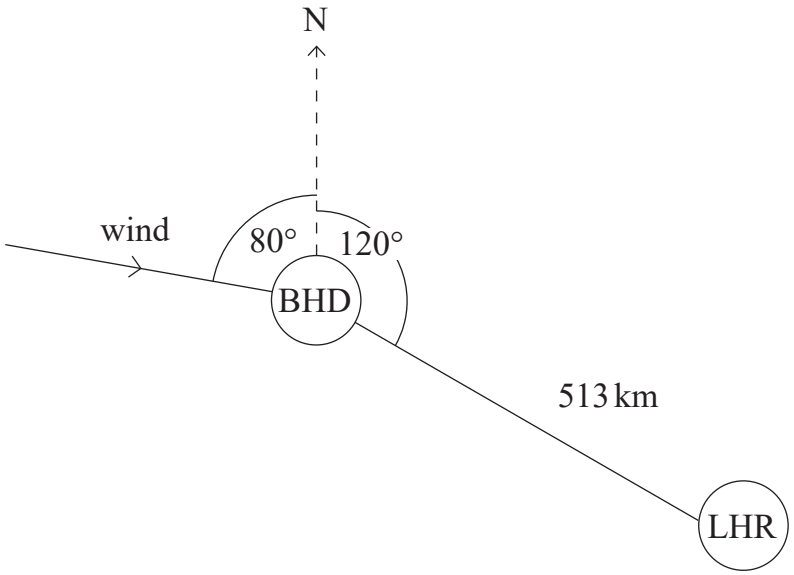

Fig. 2

The speed of the aeroplane in still air is constant for both parts of the journey.

(ii) Find the time taken for the return journey. [9]

5 The ends of a light elastic string of natural length 0.6 m are attached to two fixed points P and Q which are 0.65 m apart on the same horizontal level.

A smooth ring of mass 2.67 kg is threaded on the string.

The length of the extended string is 0.89 m.

The ring is held in place at R by a horizontal force F newtons acting so that RP and RQ are at right angles, as shown in **Fig. 3** below, with RQ < PR.

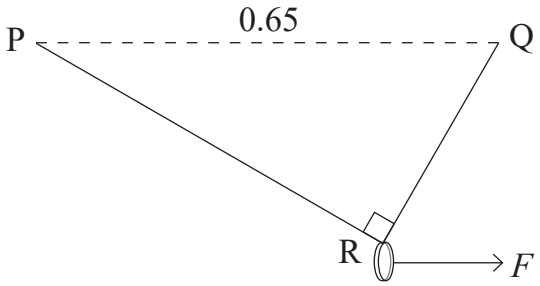

Fig. 3

(i) Using Pythagoras' theorem, show that RQ = 0.33 m. [4]

(ii) Show that the modulus of elasticity of the string is approximately 39.5 N. [6]

(iii) Calculate the value of the force F. [2]

SECTION C Statistics

Answer all five questions in this section.

1 **(a)** The random variable Y is found directly from the random variable X using the formula

$$Y = aX + b$$

where a and b are positive constants.

X has expected value 15 and variance 6
Y has expected value 25 and variance 13.5

Find the values of a and b. [5]

(b) A researcher is investigating a possible relationship between IQ score and head circumference in adult humans.

She randomly selects a number of adults to participate in the study and asks them to complete an IQ test.

She records the IQ score and head circumference for each adult.

From the data, the researcher found the equation of the least squares regression line of IQ score on head circumference.

(i) Write down the response variable in this study. [1]

(ii) Comment on the reliability of using the researcher's regression line to estimate the head circumference of an adult with a given IQ score. [1]

The researcher calculated the product–moment correlation coefficient to be + 0.92

(iii) Comment on whether or not this provides sufficient evidence to show that head circumference affects IQ score. [2]

2 A die is biased such that the probability of it landing on a two in a single throw is 0.2

Let the number of throws needed for the die to land on a two for the first time be modelled by the random variable X.

(i) Copy and complete **Table 1** below showing the probability distribution of X. [5]

Table 1

x	1	2	3	4 or more
$P(X = x)$				

(ii) Find the variance of X.

$\left[\text{If } X \sim \text{Geo}(p), \text{ then } \text{Var}(X) = \frac{1-p}{p^2}\right]$ [2]

3 Six racehorses are being entered into a charity race.

Each horse has a different one of the first six letters of the alphabet printed on its saddle.

At the start of the race they are randomly placed into a line of six traps.

(i) Find the number of possible arrangements. [1]

The race now begins with each horse having an equal chance of winning.

Find the probability that the horses labelled A, B, and C finish:

(ii) first, second and third respectively; [2]

(iii) in the top three places (in any order). [2]

After the race the six horses are allowed to cool down by walking around a circular paddock.

They enter the paddock in no particular order and are equally spaced around the closed circle.

(iv) Find the number of possible arrangements if there are no further restrictions. [2]

(v) Find the number of arrangements in which horses labelled A, B, and C are next to each other. [3]

4 During the peak of a meteor shower the number of meteors detected per hour follows a Poisson distribution.

On average, during the peak of any Orionids meteor shower, 20 meteors are detected per hour.

During the peak of the next Orionids meteor shower find the probability that:

(i) exactly 15 meteors are detected in a one-hour period; [2]

(ii) more than 12 meteors are detected in a 30-minute period. [3]

The Lyrids meteor shower has a lower average peak rate of meteors.

The probability that more than ten meteors are detected in a one-hour period during the peak of the Lyrids meteor shower is 0.3 (to 1 dp).

(iii) Using the Poisson Cumulative Distribution Function table, find the average hourly rate of detected meteors for the peak of the Lyrids meteor shower.

Give your answer to the nearest whole number. [3]

5 The random variable X has the continuous probability density function f(x) defined by

$$\mathrm{f}(x) = \begin{cases} ax^2 + bx + \frac{1}{6} & 0 \leqslant x \leqslant 2 \\ 0 & \text{otherwise} \end{cases}$$

where a and b are constants.

(i) Given that $\mathrm{E}(X) = \frac{13}{9}$ find the values of a and b. [10]

(ii) Find the modal value of X. [2]

(iii) Show that M, the median value of X, satisfies the equation

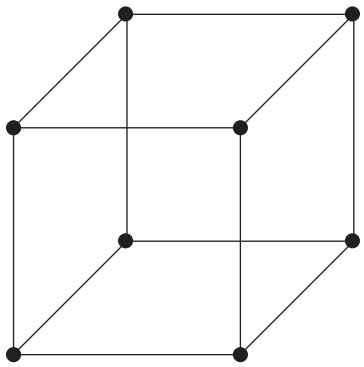

$$M^3 - M^2 + M - 3 = 0$$ [4]

SECTION D Discrete and Decision Mathematics

Answer all five questions in this section.

Note: A Supplementary Answer Booklet has been provided for Questions **1(b)** and **4(b)(i)**
Please attach this to your Answer Booklet using the treasury tag provided.

1 **(a)** The graph G_c of the cube is shown in **Fig. 1** below

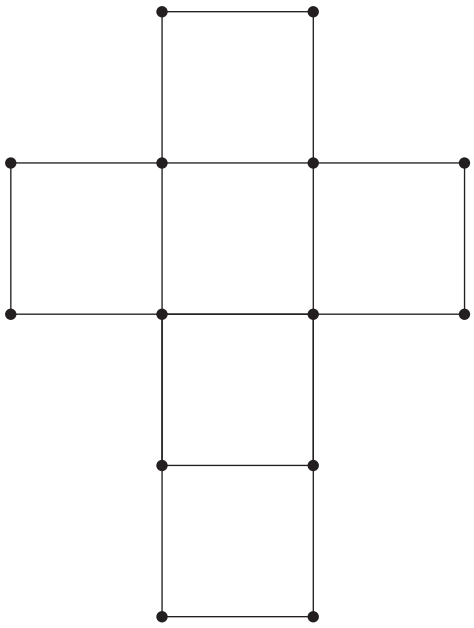

G_c

Fig. 1

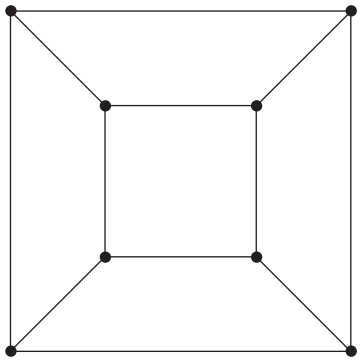

(i) State whether each of the graphs G_c or $K_{3,3}$ is planar or not. [2]

(ii) If either G_c or $K_{3,3}$ is planar then redraw that graph with no edge crossings. [2]

(b) The graphs R and S are shown in **Fig. 2** below.

R

S

Fig. 2

Copy and complete in the **Supplementary Answer Booklet** the table shown in **Fig. 3** below by

- ticking in the 2nd column if the graph has an Eulerian trail – one that need not start and finish on the same vertex
- writing the minimum number of edges that need to be removed to leave a subgraph with an Eulerian circuit in the 3rd column.

Graph	Has an Eulerian trail	Number of edges that must be removed to leave an Eulerian circuit
R		
S		

[4]

Fig. 3

2 An entomologist discovers a new variety of locust.

The number of locusts in any generation is found to be twice the number in the parent generation plus three times the number in the grandparent generation.

Let u_n be the number of locusts, in 1000s, in generation n.

(i) Show that u_n satisfies the recurrence relationship

$$u_{n+2} = 2u_{n+1} + 3u_n$$

where $n \geqslant 0$ is an integer. [1]

There are 1000 locusts in each of the two generations ($n = 0$, 1)

(ii) Show that

$$u_n = k(\alpha^n + \beta^n)$$

where α and β are integers to be determined. [6]

(iii) Calculate how many locusts are in generation 10 [2]

3 Let p, q and r be propositional statements.

Use truth tables to prove that

$$(p \text{ and } \sim q) \text{ or } \sim r$$

and

$$\sim[\ (\sim p \text{ or } q) \text{ and } r\ ]$$

are equivalent. [8]

4 **(a)** The distances, in km, between 9 towns are given in the route map **Fig. 4** below.

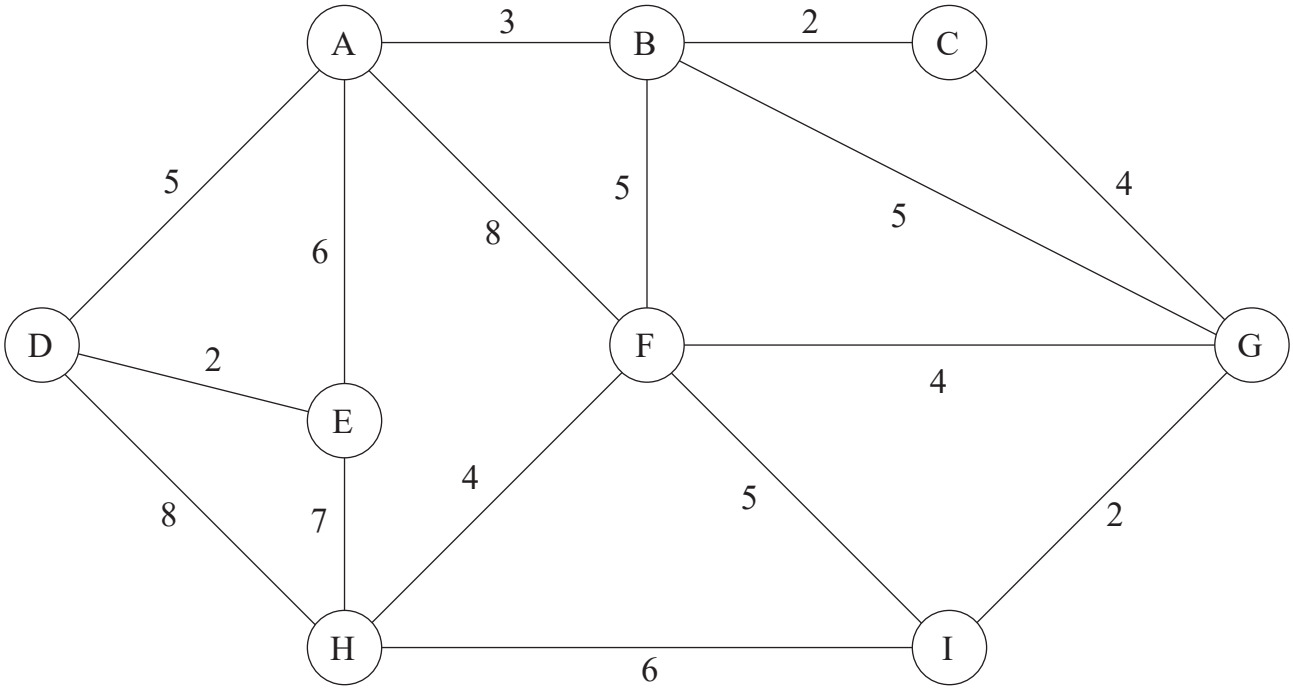

Fig. 4

A delivery company wants to find a minimum spanning tree for this route map.

(i) Using Prim's algorithm and starting at vertex A, find a minimum spanning tree for this route map.

List the arcs in the order in which they are selected. [4]

(ii) What is the distance of this spanning tree? [1]

(b) **Fig. 5** below represents the activity network of a set-up for a conference.

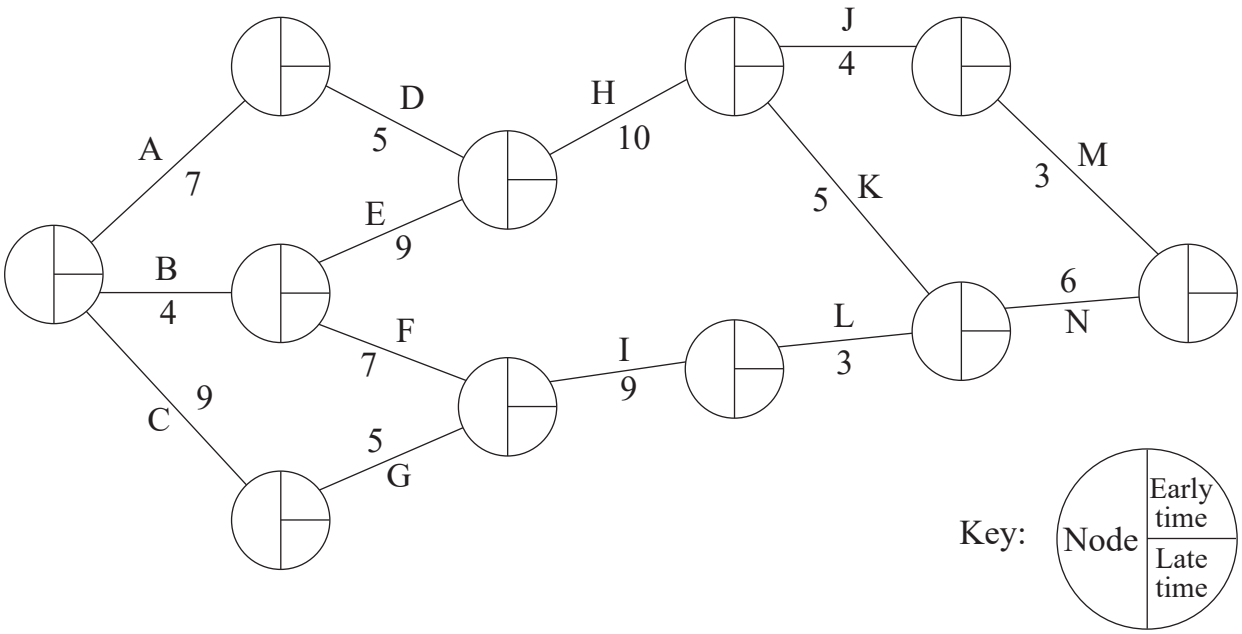

Fig. 5

Activities are represented by the arcs A, B, C, ..., M and N.

The adjacent numbers give the time in days for the associated activity.

(i) Calculate the early event time and the late event time for each event.

Record your answers in the **Supplementary Answer Booklet** provided. [4]

(ii) Write down the critical path. [1]

(iii) State the minimum number of days for the completion of the conference set-up. [1]

5 The set G = {5, 15, 25, 35} forms a group under multiplication modulo 40, $\times_{40}$

(i) Copy and complete the group table of $(G, \times_{40})$ started in **Fig. 6** below.

$\times_{40}$	5	15	25	35
5	25	35	5	15
15	35			
25	5			
35	15			

Fig. 6 [3]

(ii) Write down the identity element of $(G, \times_{40})$. [1]

(iii) Copy and complete the table of elements and their periods of $(G, \times_{40})$ in **Fig. 7** below.

Element	5	15	25	35
Period				

Fig. 7 [2]

(iv) List all the subgroups of $(G, \times_{40})$. [3]

The set H = $\{e, a, b, c\}$ forms a group under the operation $\circ$ defined by the Cayley table in **Fig. 8** below.

$\circ$	e	a	b	c
e	e	a	b	c
a	a	b	c	e
b	b	c	e	a
c	c	e	a	b

Element	e	a	b	c
Period	1	4	2	4

Fig. 8

The set K = $\left\{ p = \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix},\ q = \begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix},\ r = \begin{pmatrix} 1 & 0 \\ 0 & \mathrm{i} \end{pmatrix},\ s = \begin{pmatrix} 1 & 0 \\ 0 & -\mathrm{i} \end{pmatrix} \right\}$

forms a group under matrix multiplication, where $\mathrm{i} = \sqrt{-1}$

(v) Copy and complete the Cayley table of (K, $\times$) started in **Fig. 9** below.

$\times$	p	q	r	s
p	p	q	r	s
q	q			
r	r			
s	s			

Fig. 9 [3]

(vi) State with a reason which of the two groups $(G, \times_{40})$ or (H, $\circ$) is isomorphic to (K, $\times$). [2]

PURE MATHEMATICS

Mensuration

Surface area of sphere = $4\pi r^2$
Area of curved surface of cone = $\pi r \times \text{slant height}$

Summations

$$\sum_{r=1}^{n} r^2 = \frac{1}{6}n(n+1)(2n+1)$$

$$\sum_{r=1}^{n} r^3 = \frac{1}{4}n^2(n+1)^2$$

Arithmetic Series

$u_n = a + (n-1)d$

$$S_n = \frac{1}{2}n(a+l) = \frac{1}{2}n\left[2a+(n-1)d\right]$$

Geometric Series

$u_n = ar^{n-1}$

$$S_n = \frac{a(1-r^n)}{1-r}$$

$$S_\infty = \frac{a}{1-r} \text{ for } |r| < 1$$

Binomial Series

$$\binom{n}{r} + \binom{n}{r+1} = \binom{n+1}{r+1}$$

$$(a+b)^n = a^n + \binom{n}{1}a^{n-1}b + \binom{n}{2}a^{n-2}b^2 + \ldots + \binom{n}{r}a^{n-r}b^r + \ldots + b^n \qquad (n \in \mathbb{N})$$

where $\binom{n}{r} = {}^nC_r = \frac{n!}{r!(n-r)!}$

$$(1+x)^n = 1 + nx + \frac{n(n-1)}{1.2}x^2 + \ldots + \frac{n(n-1)\ldots(n-r+1)}{1.2\ldots r}x^r + \ldots \quad (|x|<1, n \in \mathbb{R})$$

Logarithms and exponentials

$$\mathrm{e}^{x \ln a} = a^x$$

Complex Numbers

$$\{r(\cos\theta + \mathrm{i}\sin\theta)\}^n = r^n(\cos n\theta + \mathrm{i}\sin n\theta)$$

$$\mathrm{e}^{\mathrm{i}\theta} = \cos\theta + \mathrm{i}\sin\theta$$

The roots of $z^n = 1$ are given by $z = \mathrm{e}^{\frac{2\pi k\mathrm{i}}{n}}$, for $k = 0, 1, 2, \ldots, n-1$

Maclaurin's Series

$$\mathrm{f}(x) = \mathrm{f}(0) + x\mathrm{f}'(0) + \frac{x^2}{2!}\mathrm{f}''(0) + \ldots + \frac{x^r}{r!}\mathrm{f}^{(\mathrm{r})}(0) + \ldots$$

$$\mathrm{e}^x = \exp(x) = 1 + x + \frac{x^2}{2!} + \ldots + \frac{x^r}{r!} + \ldots \text{ for all } x$$

$$\ln(1+x) = x - \frac{x^2}{2} + \frac{x^3}{3} - \ldots + (-1)^{r+1}\frac{x^r}{r} + \ldots \quad (-1 < x \leq 1)$$

$$\sin x = x - \frac{x^3}{3!} + \frac{x^5}{5!} - \ldots + (-1)^r\frac{x^{2r+1}}{(2r+1)!} + \ldots \text{ for all } x$$

$$\cos x = 1 - \frac{x^2}{2!} + \frac{x^4}{4!} - \ldots + (-1)^r\frac{x^{2r}}{(2r)!} + \ldots \text{ for all } x$$

$$\tan^{-1} x = x - \frac{x^3}{3} + \frac{x^5}{5} - \ldots (-1)^r\frac{x^{2r+1}}{2r+1} + \ldots \quad (-1 < x < 1)$$

$$\sinh x = x + \frac{x^3}{3!} + \frac{x^5}{5!} + \ldots + \frac{x^{2r+1}}{(2r+1)!} + \ldots \text{ for all } x$$

$$\cosh x = 1 + \frac{x^2}{2!} + \frac{x^4}{4!} + \ldots + \frac{x^{2r}}{(2r)!} + \ldots \text{ for all } x$$

$$\tanh^{-1} x = x + \frac{x^3}{3} + \frac{x^5}{5} + \ldots + \frac{x^{2r+1}}{2r+1} + \ldots \quad (-1 < x < 1)$$

Hyperbolic Functions

$\cosh^2 x - \sinh^2 x = 1$

$\sinh 2x = 2\sinh x \cosh x$

$\cosh 2x = \cosh^2 x + \sinh^2 x$

$\cosh^{-1} x = \ln\left(x + \sqrt{x^2 - 1}\right) \quad (x \geq 1)$

$\sinh^{-1} x = \ln\left(x + \sqrt{x^2 + 1}\right)$

$\tanh^{-1} x = \frac{1}{2}\ln\left(\frac{1+x}{1-x}\right) \quad (|x| < 1)$

Trigonometry

In the triangle ABC: $a^2 = b^2 + c^2 - 2bc \cos A$

Trigonometric Identities

$\sin (A \pm B) = \sin A \cos B \pm \cos A \sin B$

$\cos (A \pm B) = \cos A \cos B \mp \sin A \sin B$

$\tan (A \pm B) = \frac{\tan A \pm \tan B}{1 \mp \tan A \tan B} \quad (A \pm B \neq (k + \frac{1}{2})\,\pi)$

Small angle approximations

$\sin \theta \approx \theta$

$\cos \theta \approx 1 - \frac{\theta^2}{2}$

$\tan \theta \approx \theta$

where θ is measured in radians.

Vectors

Vector product: $\mathbf{a}\times\mathbf{b} = |\mathbf{a}||\mathbf{b}|\sin\theta\hat{\mathbf{n}} = \begin{vmatrix}\mathbf{i} & a_1 & b_1\\ \mathbf{j} & a_2 & b_2\\ \mathbf{k} & a_3 & b_3\end{vmatrix} = \begin{pmatrix}a_2b_3 - a_3b_2\\ a_3b_1 - a_1b_3\\ a_1b_2 - a_2b_1\end{pmatrix}$

$$\mathbf{a}.(\mathbf{b}\times\mathbf{c}) = \begin{vmatrix}a_1 & b_1 & c_1\\ a_2 & b_2 & c_2\\ a_3 & b_3 & c_3\end{vmatrix} = \mathbf{b}.(\mathbf{c}\times\mathbf{a}) = \mathbf{c}.(\mathbf{a}\times\mathbf{b})$$

If A is the point with position vector $\mathbf{a} = a_1\mathbf{i} + a_2\mathbf{j} + a_3\mathbf{k}$ and the direction vector $\mathbf{b}$ is given by $\mathbf{b} = b_1\mathbf{i} + b_2\mathbf{j} + b_3\mathbf{k}$, then the straight line through A with direction vector $\mathbf{b}$ has cartesian equation

$$\frac{x-a_1}{b_1} = \frac{y-a_2}{b_2} = \frac{z-a_3}{b_3} \quad (= \lambda)$$

The plane through A with normal vector $\mathbf{n} = n_1\mathbf{i} + n_2\mathbf{j} + n_3\mathbf{k}$ has cartesian equation $n_1x + n_2y + n_3z + d = 0$ where $d = -\mathbf{a}.\mathbf{n}$

The plane through non-collinear points *A*, *B* and *C* has vector equation
$\mathbf{r} = \mathbf{a} + \lambda(\mathbf{b} - \mathbf{a}) + \mu(\mathbf{c} - \mathbf{a}) = (1 - \lambda - \mu)\mathbf{a} + \lambda\mathbf{b} + \mu\mathbf{c}$

The plane through the point with position vector $\mathbf{a}$ and parallel to vectors $\mathbf{b}$ and $\mathbf{c}$ has equation
$\mathbf{r} = \mathbf{a} + s\mathbf{b} + t\mathbf{c}$

The perpendicular distance of (α, β, γ) from $n_1x + n_2y + n_3z + d = 0$ is $\dfrac{|n_1\alpha + n_2\beta + n_3\gamma + d|}{\sqrt{n_1^2 + n_2^2 + n_3^2}}$

Matrix transformations

Anticlockwise rotation through θ about the origin: $\begin{pmatrix}\cos\theta & -\sin\theta\\ \sin\theta & \cos\theta\end{pmatrix}$

Reflection in the line $y = (\tan\theta)\,x$: $\begin{pmatrix}\cos 2\theta & \sin 2\theta\\ \sin 2\theta & -\cos 2\theta\end{pmatrix}$

Differentiation

$f(x)$	$f'(x)$
$\tan kx$	$k \sec^2 kx$
$\frac{f(x)}{g(x)}$	$\frac{f'(x)g(x) - f(x)g'(x)}{(g(x))^2}$
$\sin^{-1} x$	$\frac{1}{\sqrt{1-x^2}}$
$\cos^{-1} x$	$-\frac{1}{\sqrt{1-x^2}}$
$\tan^{-1} x$	$\frac{1}{1+x^2}$
$\sec x$	$\sec x \tan x$
$\cot x$	$-\operatorname{cosec}^2 x$
$\operatorname{cosec} x$	$-\operatorname{cosec} x \cot x$
$\sinh x$	$\cosh x$
$\cosh x$	$\sinh x$
$\tanh x$	$\operatorname{sech}^2 x$
$\sinh^{-1} x$	$\frac{1}{\sqrt{1+x^2}}$
$\cosh^{-1} x$	$\frac{1}{\sqrt{x^2-1}}$
$\tanh^{-1} x$	$\frac{1}{1-x^2}$

Integration

(+ constant; a > 0 where relevant)

$f(x)$	$\int f(x)\,dx$
$\tan x$	$\ln \lvert\sec x\rvert$
$\cot x$	$\ln \lvert\sin x\rvert$
$\operatorname{cosec} x$	$-\ln \lvert\operatorname{cosec} x + \cot x\rvert = \ln\left\lvert\tan\left(\frac{x}{2}\right)\right\rvert$
$\sec x$	$\ln \lvert\sec x + \tan x\rvert = \ln\left\lvert\tan\left(\frac{x}{2}+\frac{\pi}{4}\right)\right\rvert$
$\sec^2 kx$	$\frac{1}{k}\tan kx$
$\sinh x$	$\cosh x$
$\cosh x$	$\sinh x$
$\tanh x$	$\ln \lvert\cosh x\rvert$
$\frac{1}{\sqrt{a^2-x^2}}$	$\sin^{-1}\left(\frac{x}{a}\right), (\lvert x\rvert < a)$
$\frac{1}{a^2+x^2}$	$\frac{1}{a}\tan^{-1}\left(\frac{x}{a}\right)$
$\frac{1}{\sqrt{x^2-a^2}}$	$\cosh^{-1}\left(\frac{x}{a}\right)$ or $\ln\left(x+\sqrt{x^2-a^2}\right), (x > a)$
$\frac{1}{\sqrt{a^2+x^2}}$	$\sinh^{-1}\left(\frac{x}{a}\right)$ or $\ln\left(x+\sqrt{x^2+a^2}\right)$
$\frac{1}{a^2-x^2}$	$\frac{1}{2a}\ln\left\lvert\frac{a+x}{a-x}\right\rvert = \frac{1}{a}\tanh^{-1}\left(\frac{x}{a}\right), (\lvert x\rvert < a)$
$\frac{1}{x^2-a^2}$	$\frac{1}{2a}\ln\left\lvert\frac{x-a}{x+a}\right\rvert, (\lvert x\rvert > a)$

$$\int u\frac{dv}{dx}\,dx = uv - \int v\frac{du}{dx}\,dx$$

Area of a Sector

$A = \frac{1}{2}\int r^2 d\theta$ (polar coordinates)

NUMERICAL MATHEMATICS

Numerical integration

The trapezium rule: $\int_a^b y\,\mathrm{d}x \approx \frac{1}{2}h\{(y_0 + y_n) + 2(y_1 + y_2 + \ldots + y_{n\text{-}1})\}$, where $h = \frac{b-a}{n}$

Numerical Solution of Equations

The Newton-Raphson iteration for solving $\mathrm{f}(x) = 0$: $x_{n+1} = x_{\mathrm{n}} - \frac{\mathrm{f}(x_n)}{\mathrm{f}'(x_n)}$

MECHANICS

Motion in a circle

Transverse velocity: $v = r\dot{\theta}$

Transverse acceleration: $\dot{v} = r\ddot{\theta}$

Radial acceleration: $-r\dot{\theta}^2 = -\frac{v^2}{r}$

Centres of Mass

For uniform bodies

Triangular lamina: $\frac{2}{3}$ along median from vertex

Solid hemisphere, radius *r* : $\frac{3}{8}r$ from centre

Hemispherical shell, radius *r* : $\frac{1}{2}r$ from centre

Circular arc, radius *r*, angle at centre 2α: $\frac{r\sin\alpha}{\alpha}$ from centre

Sector of circle, radius *r*, angle at centre 2α: $\frac{2r\sin\alpha}{3\alpha}$ from centre

Solid cone or pyramid of height *h*: $\frac{1}{4}h$ above the base on the line from centre of base to vertex

Conical shell of height *h*: $\frac{1}{3}h$ above the base on the line from centre of base to vertex

Universal law of gravitation

Force = $\frac{Gm_1m_2}{d^2}$

PROBABILITY AND STATISTICS

Probability

$P(A \cup B) = P(A) + P(B) - P(A \cap B)$

$P(A \cap B) = P(A)P(B|A)$

$$P(A|B) = \frac{P(B \mid A)P(A)}{P(B \mid A)P(A) + P(B \mid A')P(A')}$$

Discrete distributions

For a discrete random variable X taking values x_i with probabilities p_i

Expectation (mean): $E(X) = \mu = \sum_i x_i p_i$

Variance: $\mathrm{Var}(X) = \sigma^2 = \Sigma_i (x_i - \mu)^2 p_i = \sum_i x_i^2 p_i - \mu^2$

For a function $g(X)$: $E(g(X)) = \sum_i g(x_i) p_i$

Standard discrete distributions:

Distribution of X	$P(X = x)$	Mean	Variance
Binomial $B(n, p)$	$\binom{n}{x} p^x (1-p)^{n-x}$	np	$np(1-p)$
Poisson $Po(\lambda)$	$e^{-\lambda} \frac{\lambda^x}{x!}$	λ	λ

Continuous distributions

For a continuous random variable X having probability density function $f(x)$:

Expectation (mean): $E(X) = \mu = \int x f(x) dx$

Variance: $\mathrm{Var}(X) = \sigma^2 = \int (x - \mu)^2 f(x) dx = \int x^2 f(x) dx - \mu^2$

For a function $g(X)$: $E(g(X)) = \int g(x) f(x) dx$

Standard continuous distributions

Distribution of X	P.D.F.	Mean	Variance
Uniform (Rectangular) on $[a, b]$	$\frac{1}{b-a}$	$\frac{1}{2}(a+b)$	$\frac{1}{12}(b-a)^2$
Normal N(μ, σ^2)	$\frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{1}{2}\left(\frac{x-\mu}{\sigma}\right)^2}$	μ	σ^2

Expectation algebra

For independent random variables X and Y

$\mathrm{E}(XY) = \mathrm{E}(X)\mathrm{E}(Y)$; $\mathrm{Var}(aX \pm bY) = a^2\,\mathrm{Var}(X) + b^2\,\mathrm{Var}(Y)$

Sampling distributions

For a random sample $x_1, x_2, \ldots, x_n$ of n independent observations from a distribution having mean μ and variance σ^2

$\bar{x}$ is an unbiased estimator of μ, with $\mathrm{Var}(\bar{x}) = \frac{\sigma^2}{n}$

S^2 is an unbiased estimator of σ^2, where $S^2 = \frac{\Sigma(x_i - \bar{x})^2}{n-1}$

If X is the observed number of successes in n independent Bernoulli trials in each of which the probability of success is p, and $Y = \frac{x}{n}$, then

$\mathrm{E}(Y) = p$ and $\mathrm{Var}(Y) = \frac{p(1-p)}{n}$

For a random sample of n_X observations from N(μ_x, σ_x^2) and, independently, a random sample of n_y observations from N(μ_y, σ_y^2)

$$\frac{(\bar{X} - \bar{Y}) - (\mu_x - \mu_y)}{\sqrt{\frac{\sigma_x^2}{n_x} + \frac{\sigma_y^2}{n_y}}} \sim \mathrm{N}(0,1)$$

If $\sigma_x^2 = \sigma_y^2 = \sigma^2$ (unknown) then

$$\frac{(\bar{X} - \bar{Y}) - (\mu_x - \mu_y)}{\sqrt{S_\mathrm{p}^2\left(\frac{1}{n_x} + \frac{1}{n_y}\right)}} \sim t_{n_x + n_y - 2} \text{ where } S_\mathrm{p}^2 = \frac{(n_x - 1)S_x^2 + (n_y - 1)S_y^2}{n_x + n_y - 2}$$

Correlation and regression

For a set of n pairs of values (x_i, y_i)

$$S_{xx} = \Sigma(x_i - \bar{x})^2 = \Sigma x_i^2 - \frac{(\Sigma x_i)^2}{n}$$

$$S_{yy} = \Sigma(y_i - \bar{y})^2 = \Sigma y_i^2 - \frac{(\Sigma y_i)^2}{n}$$

$$S_{xy} = \Sigma(x_i - \bar{x})(y_i - \bar{y}) = \Sigma x_i y_i - \frac{(\Sigma x_i)(\Sigma y_i)}{n}$$

The product moment correlation coefficient is

$$r = \frac{S_{xy}}{\sqrt{S_{xx} S_{yy}}} = \frac{\Sigma(x_i - \bar{x})(y_i - \bar{y})}{\sqrt{\{\Sigma(x_i - \bar{x})^2\}\{\Sigma(y_i - \bar{y})^2\}}} = \frac{\Sigma x_i y_i - \frac{(\Sigma x_i)(\Sigma y_i)}{n}}{\sqrt{\left(\Sigma x_i^2 - \frac{(\Sigma x_i)^2}{n}\right)\left(\Sigma y_i^2 - \frac{(\Sigma y_i)^2}{n}\right)}}$$

The regression coefficient of y on x is $b = \frac{S_{xy}}{S_{xx}} = \frac{\Sigma(x_i - \bar{x})(y_i - \bar{y})}{\Sigma(x_i - \bar{x})^2}$

Least squares regression line of y on x is $y = a + bx$ where $a = \bar{y} - b\bar{x}$

Non-parametric tests

Goodness-of-fit test and contingency tables:

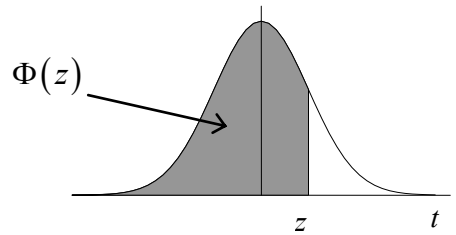

$$\sum \frac{(O_i - E_i)^2}{E_i} \sim \chi_v^2$$

NORMAL PROBABILITY TABLE

The function tabulated is $\Phi(z) = \int_{-\infty}^{z} \frac{1}{\sqrt{2\pi}} e^{-\frac{1}{2}t^2} \, \mathrm{d}t$. $\Phi(z)$ is the probability that a random variable having a Normal frequency density, with mean zero and variance unity, will be less than z.

BINOMIAL CUMULATIVE DISTRIBUTION FUNCTION

The tabulated value is $P(X \leq x)$, where X has a binomial distribution with index n and parameter p.

p =	0.05	0.10	0.15	0.20	0.25	0.30	0.35	0.40	0.45	0.50

POISSON CUMULATIVE DISTRIBUTION FUNCTION

The tabulated value is $P(X \leq x)$, where X has a Poisson distribution with parameter λ.

$\lambda =$	0.5	1.0	1.5	2.0	2.5	3.0	3.5	4.0	4.5	5.0

CRITICAL VALUES FOR CORRELATION COEFFICIENTS

These tables concern tests of the hypothesis that a population correlation coefficient ρ is 0. The values in the tables are the minimum values which need to be reached by a sample correlation coefficient in order to be significant at the level shown, on a one-tailed test.

Sample	Product Moment Coefficient				
			Level

Cycle indices for 3D rotational symmetry groups acting on:

Vertices of a Tetrahedron	$\frac{1}{12}(x_1^4 + 8x_1^1x_3^1 + 3x_2^2)$
Faces of a Tetrahedron	$\frac{1}{12}(x_1^4 + 8x_1^1x_3^1 + 3x_2^2)$
Edges of a Tetrahedron	$\frac{1}{12}(x_1^6 + 8x_3^2 + 3x_1^2x_2^2)$
Vertices of a Cube	$\frac{1}{24}(x_1^8 + 8x_1^2x_3^2 + 9x_2^4 + 6x_4^2)$
Faces of a Cube	$\frac{1}{24}(x_1^6 + 6x_1^2x_4^1 + 3x_1^2x_2^2 + 6x_2^3 + 8x_3^2)$
Edges of a Cube	$\frac{1}{24}(x_1^{12} + 3x_2^6 + 6x_1^2x_2^5 + 6x_4^3 + 8x_3^4)$
Vertices of an Octahedron	$\frac{1}{24}(x_1^6 + 6x_1^2x_4^1 + 3x_1^2x_2^2 + 6x_2^3 + 8x_3^2)$
Faces of an Octahedron	$\frac{1}{24}(x_1^8 + 8x_1^2x_3^2 + 9x_2^4 + 6x_4^2)$
Edges of an Octahedron	$\frac{1}{24}(x_1^{12} + 3x_2^6 + 6x_1^2x_2^5 + 6x_4^3 + 8x_3^4)$

Cycle Indices for 3D rotational symmetry groups (rotation plus flip) acting on polygons.

Polygon with p (prime) vertices	$\frac{1}{2p}\left(x_1^p + (p-1)x_p^1 + px_1^1x_2^{\frac{p-1}{2}}\right)$
Square	$\frac{1}{8}(x_1^4 + 3x_2^2 + 2x_4^1 + 2x_1^2x_2^1)$
Hexagon	$\frac{1}{12}(x_1^6 + 4x_2^3 + 2x_3^2 + 2x_6^1 + 3x_1^2x_2^2)$
Octagon	$\frac{1}{16}(x_1^8 + 4x_1^2x_2^3 + 5x_2^4 + 2x_4^2 + 4x_8^1)$
Nonagon	$\frac{1}{18}(x_1^9 + 9x_1^1x_2^4 + 6x_9^1 + 2x_3^3)$
Decagon	$\frac{1}{20}(x_1^{10} + 6x_2^5 + 4x_5^2 + 4x_{10}^1 + 5x_1^2x_2^4)$
Dodecagon	$\frac{1}{24}(x_1^{12} + 7x_2^6 + 2x_3^4 + 2x_4^3 + 2x_6^2 + 4x_{12}^1 + 6x_1^2x_2^5)$
