Paper 4 A Level Structured Questions

May/June 2016

2 hours

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer **all** questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of **26** printed pages and **2** blank pages.

Data

speed of light in free space	$c = 3.00 \times 10^8 \text{ m s}^{-1}$
permeability of free space	$\mu_0 = 4\pi \times 10^{-7} \text{ H m}^{-1}$
permittivity of free space	$\epsilon_0 = 8.85 \times 10^{-12} \text{ F m}^{-1}$
	$(\frac{1}{4\pi\epsilon_0} = 8.99 \times 10^9 \text{ m F}^{-1})$
elementary charge	$e = 1.60 \times 10^{-19} \text{ C}$
the Planck constant	$h = 6.63 \times 10^{-34} \text{ J s}$
unified atomic mass unit	$1 \text{ u} = 1.66 \times 10^{-27} \text{ kg}$
rest mass of electron	$m_e = 9.11 \times 10^{-31} \text{ kg}$
rest mass of proton	$m_p = 1.67 \times 10^{-27} \text{ kg}$
molar gas constant	$R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$
the Avogadro constant	$N_A = 6.02 \times 10^{23} \text{ mol}^{-1}$
the Boltzmann constant	$k = 1.38 \times 10^{-23} \text{ J K}^{-1}$
gravitational constant	$G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$
acceleration of free fall	$g = 9.81 \text{ m s}^{-2}$

Formulae

uniformly accelerated motion	$s = ut + \frac{1}{2}at^2$ $v^2 = u^2 + 2as$
work done on/by a gas	$W = p\Delta V$
gravitational potential	$\phi = -\frac{Gm}{r}$
hydrostatic pressure	$p = \rho gh$
pressure of an ideal gas	$p = \frac{1}{3} \frac{Nm}{V} \langle c^2 \rangle$
simple harmonic motion	$a = -\omega^2 x$
velocity of particle in s.h.m.	$v = v_0 \cos \omega t$ $v = \pm \omega \sqrt{(x_0^2 - x^2)}$
Doppler effect	$f_o = \frac{f_s v}{v \pm v_s}$
electric potential	$V = \frac{Q}{4\pi\epsilon_0 r}$
capacitors in series	$1/C = 1/C_1 + 1/C_2 + \dots$
capacitors in parallel	$C = C_1 + C_2 + \dots$
energy of charged capacitor	$W = \frac{1}{2} QV$
electric current	$I = Anvq$
resistors in series	$R = R_1 + R_2 + \dots$
resistors in parallel	$1/R = 1/R_1 + 1/R_2 + \dots$
Hall voltage	$V_H = \frac{BI}{ntq}$
alternating current/voltage	$x = x_0 \sin \omega t$
radioactive decay	$x = x_0 \exp(-\lambda t)$
decay constant	$\lambda = \frac{0.693}{t_{\frac{1}{2}}}$

Answer **all** the questions in the spaces provided.

- 1 (a) By reference to the definition of gravitational potential, explain why gravitational potential is a negative quantity.

.....

 [2]

- (b) Two stars A and B have their surfaces separated by a distance of 1.4×10^{12} m, as illustrated in Fig. 1.1.

Fig. 1.1

Point P lies on the line joining the centres of the two stars. The distance x of point P from the surface of star A may be varied.

The variation with distance x of the gravitational potential ϕ at point P is shown in Fig. 1.2.

Fig. 1.2

A rock of mass 180 kg moves along the line joining the centres of the two stars, from star A towards star B.

- (i) Use data from Fig. 1.2 to calculate the change in kinetic energy of the rock when it moves from the point where $x = 0.1 \times 10^{12} \text{ m}$ to the point where $x = 1.2 \times 10^{12} \text{ m}$. State whether this change is an increase or a decrease.

change = ...J

.....
[3]

- (ii) At a point where $x = 0.1 \times 10^{12} \text{ m}$, the speed of the rock is v .

Determine the minimum speed v such that the rock reaches the point where $x = 1.2 \times 10^{12} \text{ m}$.

minimum speed = ... m s^{-1} [3]

[Total: 8]

- 2 (a) An ideal gas is assumed to consist of atoms or molecules that behave as hard, identical spheres that are in continuous motion and undergo elastic collisions.

State two further assumptions of the kinetic theory of gases.

1.

 2.

[2]

- (b) Helium-4 (${}^4_2\text{He}$) may be assumed to be an ideal gas.

- (i) Show that the mass of one atom of helium-4 is $6.6 \times 10^{-24} \text{ g}$.

[1]

- (ii) The mean kinetic energy E_K of an atom of an ideal gas is given by the expression

$$E_K = \frac{3}{2} kT.$$

Calculate the root-mean-square (r.m.s.) speed of a helium-4 atom at a temperature of 27°C .

r.m.s. speed = ... ms^{-1} [3]

[Total: 6]

- 3 (a) State, by reference to displacement, what is meant by *simple harmonic motion*.

.....

.....

.....

..... [2]

- (b) A mass is undergoing oscillations in a vertical plane.

The variation with displacement x of the acceleration a of the mass is shown in Fig. 3.1.

Fig. 3.1

State two reasons why the motion of the mass is not simple harmonic.

1.
-
2.
-
- [2]

(c) A block of wood is floating in a liquid, as shown in Fig. 3.2.

Fig. 3.2

The block is displaced vertically and then released.

The variation with time t of the displacement y of the block from its equilibrium position is shown in Fig. 3.3.

Fig. 3.3

Use data from Fig. 3.3 to determine

(i) the angular frequency ω of the oscillations,

$$\omega = \dots\dots\dots \text{rad s}^{-1} \quad [2]$$

- (ii) the maximum vertical acceleration of the block.

maximum acceleration = ... ms^{-2} [2]

- (iii) The block has mass 120 g.

The oscillations of the block are damped. Calculate the loss in energy of the oscillations of the block during the first three complete periods of its oscillations.

energy loss = ... J [3]

[Total: 11]

- 4 (a) (i) State what is meant by the *specific acoustic impedance* of a medium.

.....

 [2]

- (ii) The intensity reflection coefficient α is given by the expression

$$\alpha = \frac{(Z_2 - Z_1)^2}{(Z_2 + Z_1)^2}.$$

Explain the meanings of the symbols in this expression.

α :

 Z_2 and Z_1 :
 [2]

- (b) A parallel beam of ultrasound has intensity I_0 as it enters a muscle. The beam passes through a thickness of 3.4 cm of muscle before being incident on the boundary with a bone, as shown in Fig. 4.1.

Fig. 4.1

The intensity of the ultrasound beam as it passes into the bone is I_T .

Some data for muscle and bone are given in Fig. 4.2.

	linear absorption coefficient/ m^{-1}	specific acoustic impedance $/\text{kg m}^{-2} \text{s}^{-1}$
muscle	23	1.7×10^6
bone	130	6.3×10^6

Fig. 4.2

Calculate the ratio $\frac{I_T}{I_0}$.

ratio = ... [5]

[Total: 9]

- 5 The variation with time t of the voltage level of part of an analogue signal is shown in Fig. 5.1.

Fig. 5.1

The signal is sampled at 0.25 ms intervals. Each sample is converted into a four-bit digital number.

Fig. 5.2 lists various times t at which the voltage level is sampled.
The digital number for time $t = 0$ is shown.

time t /ms	0	0.25	0.50	0.75	1.00	1.25	1.50
digital number	1011						

Fig. 5.2

- (a) (i) On Fig. 5.2, underline the most significant bit (MSB) for the digital number at time $t = 0$. [1]
- (ii) Complete Fig. 5.2 for the times shown. [2]
- (b) After transmission of the digital numbers, the signal is passed through a digital-to-analogue converter (DAC).

On Fig. 5.3, plot the transmitted analogue signal from the DAC.

Fig. 5.3

[3]

- (c) The transmitted signal in (b) has less detail than the original signal in Fig. 5.1.

Suggest and explain two means by which the level of detail in the transmitted signal could be increased.

1.

.....

.....

2.

.....

.....

[4]

[Total: 10]

- 6 A solid metal sphere of radius R is isolated in space. The sphere is positively charged so that the electric potential at its surface is V_s . The electric field strength at the surface is E_s .
- (a) On the axes of Fig. 6.1, show the variation of the electric potential with distance x from the centre of the sphere for values of x from $x = 0$ to $x = 3R$.

Fig. 6.1

[3]

- (b) On the axes of Fig. 6.2, show the variation of the electric field strength with distance x from the centre of the sphere for values of x from $x = 0$ to $x = 3R$.

Fig. 6.2

[3]

[Total: 6]

- 7 A student sets up the circuit shown in Fig. 7.1 to measure the charge on a capacitor C for different values of potential difference across the capacitor.

Fig. 7.1

The variation with potential difference V of the charge Q stored on the capacitor is shown in Fig. 7.2.

Fig. 7.2

- (a) State and explain how Fig. 7.2 indicates that there is a systematic error in the readings of one of the meters.

.....

.....

..... [2]

(b) Use Fig. 7.2 to determine the capacitance, in μF , of capacitor C.

capacitance = ... μF [3]

(c) Use your answer in **(b)** to determine the additional energy stored in the capacitor C when the potential difference across it is increased from 6.0 V to 9.0 V.

energy = ... J [3]

[Total: 8]

- 8 The circuit of an inverting amplifier incorporating an ideal operational amplifier (op-amp) is shown in Fig. 8.1.

Fig. 8.1

- (a) Explain why point P is known as a *virtual earth*.

.....

 [3]

- (b) Derive an expression, in terms of the resistances R_1 and R_2 , for the gain of the amplifier circuit.
 Explain your working.

[3]

(c) A relay and the output terminals of the amplifier circuit are shown in Fig. 8.2.

Fig. 8.2

On Fig. 8.2, show how the relay may be connected to the amplifier output so that the relay operates only when V_{OUT} is positive. [3]

[Total: 9]

BLANK PAGE

- 9 A thin rectangular slice of aluminium has sides of length 65 mm, 50 mm and 0.10 mm, as shown in Fig. 9.1.

Fig. 9.1 (not to scale)

Some of the corners of the slice are labelled.

A current I of 3.8 A is normal to face RSXY of the slice.

In aluminium, the number of free electrons per unit volume is $6.0 \times 10^{28} \text{ m}^{-3}$.

A uniform magnetic field of magnetic flux density B equal to 0.13 T is normal to face QRYZ of the aluminium slice in the direction from Q to P.

A Hall voltage V_H is developed across the slice and is given by the expression

$$V_H = \frac{BI}{ntq}.$$

- (a) Use Fig. 9.1 to state the magnitude of the distance t .

$t = \dots\dots\dots$ mm [1]

- (b) Calculate the magnitude of the Hall voltage V_H .

$V_H = \dots\dots\dots$ V [2]

[Total: 3]

- 10 (a) A coil of insulated wire is wound on a copper core, as illustrated in Fig. 10.1.

Fig. 10.1

An alternating current is passed through the coil.

The heating effect of the current in the coil is negligible.

Explain why the temperature of the core rises.

.....

.....

.....

.....

.....

..... [4]

- (b) Two hollow tubes of equal length hang vertically as shown in Fig. 10.2.

Fig. 10.2

One tube is made of plastic and the other of aluminium.

Two small similar bar magnets A and B are held above the tubes and then released simultaneously.

The magnets do not touch the sides of the tubes.

Explain why magnet B takes much longer than magnet A to fall through the tube.

.....

.....

.....

.....

.....

.....

..... [5]

[Total: 9]

- 11 The variation with time t of the sinusoidal current I in a resistor of resistance $450\ \Omega$ is shown in Fig. 11.1.

Fig. 11.1

Use data from Fig. 11.1 to determine, for the time $t = 0$ to $t = 30$ ms,

- (a) the frequency of the current,

frequency = ... Hz [2]

- (b) the mean current,

mean current = ... A [1]

- (c) the root-mean-square (r.m.s.) current,

r.m.s. current = ... A [2]

(d) the energy dissipated by the resistor.

energy = ...J [2]

[Total: 7]

12 Some of the electron energy bands in a solid are illustrated in Fig. 12.1.

Fig. 12.1

- (a) In isolated atoms, electron energy levels have discrete values.
Suggest why, in a solid, there are energy bands, rather than discrete energy levels.

.....

.....

.....

..... [3]

- (b) A light-dependent resistor (LDR) consists of an intrinsic semiconductor.

Use band theory to explain the dependence on light intensity of the resistance of the LDR when it is at constant temperature.

.....

.....

.....

.....

.....

..... [5]

[Total: 8]

13 Copper-66 is a radioactive isotope.

When a nucleus of copper-66 decays, the emissions include a β^- particle and a γ -ray photon.

The count rate produced from a sample of the isotope copper-66 is measured using a detector and counter, as illustrated in Fig. 13.1.

Fig. 13.1

- (a)** State three reasons why the activity of the sample of copper-66 is not equal to the measured count rate.

1.
.....
2.
.....
3.
.....

[3]

- (b) In a time of 42.0 minutes, the count rate from the sample of copper-66 is found to decrease from $3.62 \times 10^4 \text{ Bq}$ to $1.21 \times 10^2 \text{ Bq}$.

Calculate the half-life of copper-66.

half-life = ... minutes [2]

- (c) The γ -ray photons emitted from radioactive nuclei have specific energies, dependent on the nucleus emitting the photons.

By comparison with emission line spectra, suggest what can be deduced about energy levels in nuclei.

.....

..... [1]

Paper 4 A Level Structured Questions

May/June 2016

2 hours

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer **all** questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of **27** printed pages and **1** blank page.

Data

speed of light in free space	$c = 3.00 \times 10^8 \text{ m s}^{-1}$
permeability of free space	$\mu_0 = 4\pi \times 10^{-7} \text{ H m}^{-1}$
permittivity of free space	$\epsilon_0 = 8.85 \times 10^{-12} \text{ F m}^{-1}$
	$(\frac{1}{4\pi\epsilon_0} = 8.99 \times 10^9 \text{ m F}^{-1})$
elementary charge	$e = 1.60 \times 10^{-19} \text{ C}$
the Planck constant	$h = 6.63 \times 10^{-34} \text{ J s}$
unified atomic mass unit	$1 \text{ u} = 1.66 \times 10^{-27} \text{ kg}$
rest mass of electron	$m_e = 9.11 \times 10^{-31} \text{ kg}$
rest mass of proton	$m_p = 1.67 \times 10^{-27} \text{ kg}$
molar gas constant	$R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$
the Avogadro constant	$N_A = 6.02 \times 10^{23} \text{ mol}^{-1}$
the Boltzmann constant	$k = 1.38 \times 10^{-23} \text{ J K}^{-1}$
gravitational constant	$G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$
acceleration of free fall	$g = 9.81 \text{ m s}^{-2}$

Formulae

uniformly accelerated motion	$s = ut + \frac{1}{2}at^2$ $v^2 = u^2 + 2as$
work done on/by a gas	$W = p\Delta V$
gravitational potential	$\phi = -\frac{Gm}{r}$
hydrostatic pressure	$p = \rho gh$
pressure of an ideal gas	$p = \frac{1}{3} \frac{Nm}{V} \langle c^2 \rangle$
simple harmonic motion	$a = -\omega^2 x$
velocity of particle in s.h.m.	$v = v_0 \cos \omega t$ $v = \pm \omega \sqrt{(x_0^2 - x^2)}$
Doppler effect	$f_o = \frac{f_s v}{v \pm v_s}$
electric potential	$V = \frac{Q}{4\pi\epsilon_0 r}$
capacitors in series	$1/C = 1/C_1 + 1/C_2 + \dots$
capacitors in parallel	$C = C_1 + C_2 + \dots$
energy of charged capacitor	$W = \frac{1}{2} QV$
electric current	$I = Anvq$
resistors in series	$R = R_1 + R_2 + \dots$
resistors in parallel	$1/R = 1/R_1 + 1/R_2 + \dots$
Hall voltage	$V_H = \frac{BI}{ntq}$
alternating current/voltage	$x = x_0 \sin \omega t$
radioactive decay	$x = x_0 \exp(-\lambda t)$
decay constant	$\lambda = \frac{0.693}{t_{\frac{1}{2}}}$

Answer **all** the questions in the spaces provided.

- 1 A binary star consists of two stars A and B that orbit one another, as illustrated in Fig. 1.1.

Fig. 1.1

The stars are in circular orbits with the centres of both orbits at point P, a distance d from the centre of star A.

- (a) (i) Explain why the centripetal force acting on both stars has the same magnitude.

.....

 [2]

- (ii) The period of the orbit of the stars about point P is 4.0 years.

Calculate the angular speed ω of the stars.

$\omega = \dots\dots\dots \text{rad s}^{-1}$ [2]

- (b) The separation of the centres of the stars is 2.8×10^8 km.
 The mass of star A is M_A . The mass of star B is M_B .
 The ratio $\frac{M_A}{M_B}$ is 3.0.

- (i) Determine the distance d .

$$d = \dots\dots\dots \text{km} \quad [3]$$

- (ii) Use your answers in (a)(ii) and (b)(i) to determine the mass M_B of star B.
 Explain your working.

$$M_B = \dots\dots\dots \text{kg} \quad [3]$$

[Total: 10]

2 (a) State what is meant by

(i) the Avogadro constant N_A ,

.....
 [1]

(ii) the mole.

.....
 [2]

(b) A container has a volume of $1.8 \times 10^4 \text{ cm}^3$.

The ideal gas in the container has a pressure of $2.0 \times 10^7 \text{ Pa}$ at a temperature of 17°C .

Show that the amount of gas in the cylinder is 150 mol.

[1]

(c) Gas molecules leak from the container in (b) at a constant rate of $1.5 \times 10^{19} \text{ s}^{-1}$.
 The temperature remains at 17°C .
 In a time t , the amount of gas in the container is found to be reduced by 5.0%.

Calculate

(i) the pressure of the gas after the time t ,

pressure = ... Pa [2]

(ii) the time t .

$t =$ s [3]

[Total: 9]

3 (a) Explain what is meant by the statement that two bodies are in *thermal equilibrium*.

.....

 [1]

(b) Suggest suitable types of thermometer, one in each case, to measure

(i) the temperature of the flame of a Bunsen burner,

..... [1]

(ii) the change in temperature of a small crystal when it is exposed to a pulse of ultrasound energy.

..... [1]

(c) Some water is heated so that its temperature changes from 26.5°C to a final temperature of 38.0°C .

State, to an appropriate number of decimal places,

(i) the change in temperature in kelvin,

change = ... K [1]

(ii) the final temperature in kelvin.

final temperature = ... K [1]

[Total: 5]

- 4 A metal block hangs vertically from one end of a spring. The other end of the spring is tied to a thread that passes over a pulley and is attached to a vibrator, as shown in Fig. 4.1.

Fig. 4.1

- (a) The vibrator is switched off. The metal block of mass 120 g is displaced vertically and then released. The variation with time t of the displacement y of the block from its equilibrium position is shown in Fig. 4.2.

Fig. 4.2

For the vibrations of the block, calculate

- (i) the angular frequency ω ,

$\omega = \dots\dots\dots \text{rad s}^{-1}$ [2]

(ii) the energy of the vibrations.

energy = ...J [2]

(b) The vibrator is now switched on.

The frequency of vibration is varied from $0.7f$ to $1.3f$ where f is the frequency of vibration of the block in (a).

For the block, complete Fig. 4.3 to show the variation with frequency of the amplitude of vibration. Label this line A. [3]

Fig. 4.3

(c) Some light feathers are now attached to the block in (b) to increase air resistance.

The frequency of vibration is once again varied from $0.7f$ to $1.3f$. The new amplitude of vibration is measured for each frequency.

On Fig. 4.3, draw a line to show the variation with frequency of the amplitude of vibration. Label this line B. [2]

[Total: 9]

5 The signal from a radio station is amplitude modulated.

(a) State what is meant by *amplitude modulation* (AM).

.....

.....

..... [2]

(b) The variation with frequency of the intensity of the signal from the radio station is shown in Fig. 5.1.

Fig. 5.1

State, for this signal,

(i) the bandwidth,

bandwidth = ... kHz [1]

(ii) the maximum audio frequency that is broadcast.

maximum frequency = ... kHz [1]

- (c) A transmission line of length 45 km has an attenuation per unit length of 2.0 dB km^{-1} .

The input power to the transmission line is 500 mW.

The minimum acceptable signal-to-noise ratio is 24 dB for background noise of $5.0 \times 10^{-13} \text{ W}$.

- (i) Calculate the minimum acceptable power output from the transmission line.

power = ... W [2]

- (ii) Use your answer in (i) to determine whether it is possible to transmit the signal along the transmission line.

[2]

[Total: 8]

- 6 (a) By reference to electric field lines, explain why, for points outside an isolated spherical conductor, the charge on the sphere may be considered to act as a point charge at its centre.

.....

 [2]

- (b) Two isolated protons are separated in a vacuum by a distance x .

- (i) Calculate the ratio

$$\frac{\text{electric force between the two protons}}{\text{gravitational force between the two protons}} .$$

ratio = ... [3]

- (ii) By reference to your answer in (i), suggest why gravitational forces are not considered when calculating the force between charged particles.

.....
 [1]

[Total: 6]

- 7 (a) State two uses of capacitors in electrical circuits, other than for the smoothing of direct current.

1.

2.

[2]

- (b) The combined capacitance between terminals A and B of the arrangement shown in Fig. 7.1 is $4.0 \mu\text{F}$.

Fig. 7.1

Two capacitors each have capacitance C and the remaining capacitors each have capacitance $3.0 \mu\text{F}$.

The potential difference (p.d.) between terminals A and B is 12 V .

- (i) Determine the capacitance C .

$$C = \dots \mu\text{F} \quad [2]$$

- (ii) Calculate the magnitude of the total positive charge transferred to the arrangement.

$$\text{charge} = \dots \mu\text{C} \quad [2]$$

(iii) Use your answer in (ii) to state the magnitude of the charge on one plate of

1. a capacitor of capacitance C ,

charge = ... μC

2. a capacitor of capacitance $3.0\ \mu\text{F}$.

charge = ... μC
[2]

[Total: 8]

8 An ideal operational amplifier (op-amp) has infinite voltage gain and infinite slew rate.

(a) State what is meant by

(i) the *voltage gain*,

.....
 [1]

(ii) *infinite slew rate*.

.....

 [2]

(b) A non-inverting amplifier circuit incorporating an ideal op-amp is shown in Fig. 8.1.

Fig. 8.1

The supply to the op-amp is $+9\text{ V}/-9\text{ V}$.

The voltage gain of the amplifier circuit is 12.

Determine the resistance of resistor R .

resistance = ... Ω [2]

- (c) For the circuit of Fig. 8.1, the variation with time t of the input potential V_{IN} to the amplifier is shown in Fig. 8.2.

Fig. 8.2

On Fig. 8.3, show the variation with time t of the output potential V_{OUT} for time $t = 0$ to time $t = t_2$.

Fig. 8.3

[4]

[Total: 9]

- 9 A magnetic field of flux density B is normal to face PQRS of a slice of a conducting material, as shown in Fig. 9.1.

Fig. 9.1

A current I in the slice is normal to face QRZY of the slice.

The Hall voltage V_H across the slice is given by the expression

$$V_H = \frac{BI}{ntq}.$$

- (a) (i) State what is represented by the symbol n .

.....
 [1]

- (ii) The symbol t represents the length of one side of the slice. Use letters from Fig. 9.1 to identify t .

..... [1]

- (b) (i) In general, the Hall voltage produced in a slice of a metal is very small. For a slice of the same dimensions with the same current and magnetic flux density, the Hall voltage produced in a semiconductor material is much larger. Suggest and explain why.

.....

 [2]

- (ii) In some semiconducting materials, electrons are mainly responsible for conduction. In other semiconducting materials, holes are mainly responsible for conduction. Suggest and explain the difference, if any, that conduction by electrons or by holes will have on the Hall voltage.

.....

.....

.....

..... [3]

[Total: 7]

- 10 Two coils P and Q are placed close to one another, as shown in Fig. 10.1.

Fig. 10.1

- (a) The current in coil P is constant.

An iron rod is inserted into coil P.

Explain why, during the time that the rod is moving, there is a reading on the voltmeter connected to coil Q.

.....

.....

.....

..... [2]

(b) The current in coil P is now varied as shown in Fig. 10.2.

Fig. 10.2

On Fig. 10.3, show the variation with time of the reading of the voltmeter connected to coil Q for time $t = 0$ to time $t = t_2$.

Fig. 10.3

[4]

[Total: 6]

- 11 A bridge rectifier contains four ideal diodes A, B, C and D, as shown in Fig. 11.1.

Fig. 11.1

The output of the rectifier is connected to a load L of resistance $2.4\text{ k}\Omega$.

- (a) On Fig. 11.1, mark with the letter P the positive terminal of the load. [1]
- (b) The variation with time t of the potential difference V across the input to the rectifier is shown in Fig. 11.2.

Fig. 11.2

Calculate the root-mean-square (r.m.s.) current in the load L .

r.m.s. current = ... A [2]

(c) The potential difference across the load L is to be smoothed using a capacitor.

(i) On Fig. 11.1, draw the symbol for a capacitor, connected to produce smoothing. [1]

(ii) The minimum potential difference across the load L with the smoothing capacitor connected is 3.0 V .

On Fig. 11.2, sketch the variation with time t of the potential difference across the load L . [3]

[Total: 7]

12 High-energy electrons collide with a metal target, producing X-ray photons.

The variation with wavelength of the intensity of the X-ray beam is illustrated in Fig. 12.1.

Fig. 12.1

(a) Explain why there is

(i) a continuous distribution of wavelengths,

.....

.....

.....

..... [3]

(ii) a sharp cut-off at short wavelength,

.....

.....

..... [2]

(iii) a series of peaks superimposed on the continuous distribution of wavelengths.

.....

..... [1]

(b) In the X-ray imaging of body structures, longer wavelength photons are frequently filtered out of the X-ray beam.

(i) State how this filtering is achieved.

.....

..... [1]

- (ii) Suggest the reason for this filtering.

.....
..... [1]

[Total: 8]

- 13 (a) Explain what is meant by *gamma radiation* (γ -radiation).

.....

 [2]

- (b) A source of gamma radiation is placed a fixed distance away from a detector and counter, as illustrated in Fig. 13.1.

Fig. 13.1

A sheet of lead of thickness x is placed between the source and the detector.
 The average count rate C , corrected for background, is recorded. This is repeated for different values of x .
 The variation with thickness x of $\ln C$ is shown in Fig. 13.2.

**Fig. 13.2**

The absorption of gamma radiation in lead may be represented by the equation

$$C = C_0 e^{-\mu x}$$

where C_0 is the count rate for $x = 0$ and μ is the linear attenuation (absorption) coefficient.

Use Fig. 13.2 to determine the linear attenuation coefficient μ for this gamma radiation in lead.

$$\mu = \dots\dots\dots \text{mm}^{-1} \quad [4]$$

Question 13 continues on the next page.

- (c) The value of μ calculated in (b) is for gamma radiation in lead.

Suggest and explain whether the value of μ for aluminium would be the same, greater or smaller.

.....

.....

..... [2]

Paper 4 A Level Structured Questions

9702/43

May/June 2016

2 hours

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer **all** questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of **26** printed pages and **2** blank pages.

Data

speed of light in free space	$c = 3.00 \times 10^8 \text{ m s}^{-1}$
permeability of free space	$\mu_0 = 4\pi \times 10^{-7} \text{ H m}^{-1}$
permittivity of free space	$\epsilon_0 = 8.85 \times 10^{-12} \text{ F m}^{-1}$
	$(\frac{1}{4\pi\epsilon_0} = 8.99 \times 10^9 \text{ m F}^{-1})$
elementary charge	$e = 1.60 \times 10^{-19} \text{ C}$
the Planck constant	$h = 6.63 \times 10^{-34} \text{ J s}$
unified atomic mass unit	$1 \text{ u} = 1.66 \times 10^{-27} \text{ kg}$
rest mass of electron	$m_e = 9.11 \times 10^{-31} \text{ kg}$
rest mass of proton	$m_p = 1.67 \times 10^{-27} \text{ kg}$
molar gas constant	$R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$
the Avogadro constant	$N_A = 6.02 \times 10^{23} \text{ mol}^{-1}$
the Boltzmann constant	$k = 1.38 \times 10^{-23} \text{ J K}^{-1}$
gravitational constant	$G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$
acceleration of free fall	$g = 9.81 \text{ m s}^{-2}$

Formulae

uniformly accelerated motion	$s = ut + \frac{1}{2}at^2$ $v^2 = u^2 + 2as$
work done on/by a gas	$W = p\Delta V$
gravitational potential	$\phi = -\frac{Gm}{r}$
hydrostatic pressure	$p = \rho gh$
pressure of an ideal gas	$p = \frac{1}{3} \frac{Nm}{V} \langle c^2 \rangle$
simple harmonic motion	$a = -\omega^2 x$
velocity of particle in s.h.m.	$v = v_0 \cos \omega t$ $v = \pm \omega \sqrt{(x_0^2 - x^2)}$
Doppler effect	$f_o = \frac{f_s v}{v \pm v_s}$
electric potential	$V = \frac{Q}{4\pi\epsilon_0 r}$
capacitors in series	$1/C = 1/C_1 + 1/C_2 + \dots$
capacitors in parallel	$C = C_1 + C_2 + \dots$
energy of charged capacitor	$W = \frac{1}{2} QV$
electric current	$I = Anvq$
resistors in series	$R = R_1 + R_2 + \dots$
resistors in parallel	$1/R = 1/R_1 + 1/R_2 + \dots$
Hall voltage	$V_H = \frac{BI}{ntq}$
alternating current/voltage	$x = x_0 \sin \omega t$
radioactive decay	$x = x_0 \exp(-\lambda t)$
decay constant	$\lambda = \frac{0.693}{t_{\frac{1}{2}}}$

Answer **all** the questions in the spaces provided.

- 1 (a) By reference to the definition of gravitational potential, explain why gravitational potential is a negative quantity.

.....

 [2]

- (b) Two stars A and B have their surfaces separated by a distance of 1.4×10^{12} m, as illustrated in Fig. 1.1.

Fig. 1.1

Point P lies on the line joining the centres of the two stars. The distance x of point P from the surface of star A may be varied.

The variation with distance x of the gravitational potential ϕ at point P is shown in Fig. 1.2.

Fig. 1.2

A rock of mass 180 kg moves along the line joining the centres of the two stars, from star A towards star B.

- (i) Use data from Fig. 1.2 to calculate the change in kinetic energy of the rock when it moves from the point where $x = 0.1 \times 10^{12} \text{ m}$ to the point where $x = 1.2 \times 10^{12} \text{ m}$. State whether this change is an increase or a decrease.

change = ...J

.....
[3]

- (ii) At a point where $x = 0.1 \times 10^{12} \text{ m}$, the speed of the rock is v .

Determine the minimum speed v such that the rock reaches the point where $x = 1.2 \times 10^{12} \text{ m}$.

minimum speed = ... m s^{-1} [3]

[Total: 8]

- 2 (a) An ideal gas is assumed to consist of atoms or molecules that behave as hard, identical spheres that are in continuous motion and undergo elastic collisions.

State two further assumptions of the kinetic theory of gases.

1.

 2.

[2]

- (b) Helium-4 (${}^4_2\text{He}$) may be assumed to be an ideal gas.

- (i) Show that the mass of one atom of helium-4 is $6.6 \times 10^{-24} \text{ g}$.

[1]

- (ii) The mean kinetic energy E_K of an atom of an ideal gas is given by the expression

$$E_K = \frac{3}{2} kT.$$

Calculate the root-mean-square (r.m.s.) speed of a helium-4 atom at a temperature of 27°C .

r.m.s. speed = ... ms^{-1} [3]

[Total: 6]

- 3 (a) State, by reference to displacement, what is meant by *simple harmonic motion*.

.....

.....

.....

..... [2]

- (b) A mass is undergoing oscillations in a vertical plane.

The variation with displacement x of the acceleration a of the mass is shown in Fig. 3.1.

Fig. 3.1

State two reasons why the motion of the mass is not simple harmonic.

1.
-
2.
-
- [2]

(c) A block of wood is floating in a liquid, as shown in Fig. 3.2.

Fig. 3.2

The block is displaced vertically and then released.

The variation with time t of the displacement y of the block from its equilibrium position is shown in Fig. 3.3.

Fig. 3.3

Use data from Fig. 3.3 to determine

(i) the angular frequency ω of the oscillations,

$$\omega = \dots\dots\dots \text{rad s}^{-1} \quad [2]$$

- (ii) the maximum vertical acceleration of the block.

maximum acceleration = ... ms^{-2} [2]

- (iii) The block has mass 120 g.

The oscillations of the block are damped. Calculate the loss in energy of the oscillations of the block during the first three complete periods of its oscillations.

energy loss = ... J [3]

[Total: 11]

- 4 (a) (i) State what is meant by the *specific acoustic impedance* of a medium.

.....

 [2]

- (ii) The intensity reflection coefficient α is given by the expression

$$\alpha = \frac{(Z_2 - Z_1)^2}{(Z_2 + Z_1)^2}.$$

Explain the meanings of the symbols in this expression.

α :

 Z_2 and Z_1 :
 [2]

- (b) A parallel beam of ultrasound has intensity I_0 as it enters a muscle. The beam passes through a thickness of 3.4 cm of muscle before being incident on the boundary with a bone, as shown in Fig. 4.1.

Fig. 4.1

The intensity of the ultrasound beam as it passes into the bone is I_T .

Some data for muscle and bone are given in Fig. 4.2.

	linear absorption coefficient/ m^{-1}	specific acoustic impedance $/\text{kg m}^{-2} \text{s}^{-1}$
muscle	23	1.7×10^6
bone	130	6.3×10^6

Fig. 4.2

Calculate the ratio $\frac{I_T}{I_0}$.

ratio = ... [5]

[Total: 9]

- 5 The variation with time t of the voltage level of part of an analogue signal is shown in Fig. 5.1.

Fig. 5.1

The signal is sampled at 0.25 ms intervals. Each sample is converted into a four-bit digital number.

Fig. 5.2 lists various times t at which the voltage level is sampled.
The digital number for time $t = 0$ is shown.

time t /ms	0	0.25	0.50	0.75	1.00	1.25	1.50
digital number	1011						

Fig. 5.2

- (a) (i) On Fig. 5.2, underline the most significant bit (MSB) for the digital number at time $t = 0$. [1]
- (ii) Complete Fig. 5.2 for the times shown. [2]
- (b) After transmission of the digital numbers, the signal is passed through a digital-to-analogue converter (DAC).

On Fig. 5.3, plot the transmitted analogue signal from the DAC.

Fig. 5.3

[3]

- (c) The transmitted signal in (b) has less detail than the original signal in Fig. 5.1.

Suggest and explain two means by which the level of detail in the transmitted signal could be increased.

1.

.....

.....

2.

.....

.....

[4]

[Total: 10]

- 6 A solid metal sphere of radius R is isolated in space. The sphere is positively charged so that the electric potential at its surface is V_s . The electric field strength at the surface is E_s .
- (a) On the axes of Fig. 6.1, show the variation of the electric potential with distance x from the centre of the sphere for values of x from $x = 0$ to $x = 3R$.

Fig. 6.1

[3]

- (b) On the axes of Fig. 6.2, show the variation of the electric field strength with distance x from the centre of the sphere for values of x from $x = 0$ to $x = 3R$.

Fig. 6.2

[3]

[Total: 6]

- 7 A student sets up the circuit shown in Fig. 7.1 to measure the charge on a capacitor C for different values of potential difference across the capacitor.

Fig. 7.1

The variation with potential difference V of the charge Q stored on the capacitor is shown in Fig. 7.2.

Fig. 7.2

- (a) State and explain how Fig. 7.2 indicates that there is a systematic error in the readings of one of the meters.

.....

.....

..... [2]

(b) Use Fig. 7.2 to determine the capacitance, in μF , of capacitor C.

capacitance = ... μF [3]

(c) Use your answer in **(b)** to determine the additional energy stored in the capacitor C when the potential difference across it is increased from 6.0 V to 9.0 V.

energy = ... J [3]

[Total: 8]

- 8 The circuit of an inverting amplifier incorporating an ideal operational amplifier (op-amp) is shown in Fig. 8.1.

Fig. 8.1

- (a) Explain why point P is known as a *virtual earth*.

.....

 [3]

- (b) Derive an expression, in terms of the resistances R_1 and R_2 , for the gain of the amplifier circuit.
 Explain your working.

[3]

(c) A relay and the output terminals of the amplifier circuit are shown in Fig. 8.2.

Fig. 8.2

On Fig. 8.2, show how the relay may be connected to the amplifier output so that the relay operates only when V_{OUT} is positive. [3]

[Total: 9]

BLANK PAGE

- 9 A thin rectangular slice of aluminium has sides of length 65 mm, 50 mm and 0.10 mm, as shown in Fig. 9.1.

Fig. 9.1 (not to scale)

Some of the corners of the slice are labelled.

A current I of 3.8 A is normal to face RSXY of the slice.

In aluminium, the number of free electrons per unit volume is $6.0 \times 10^{28} \text{ m}^{-3}$.

A uniform magnetic field of magnetic flux density B equal to 0.13 T is normal to face QRYZ of the aluminium slice in the direction from Q to P.

A Hall voltage V_H is developed across the slice and is given by the expression

$$V_H = \frac{BI}{ntq}.$$

- (a) Use Fig. 9.1 to state the magnitude of the distance t .

$t = \dots\dots\dots$ mm [1]

- (b) Calculate the magnitude of the Hall voltage V_H .

$V_H = \dots\dots\dots$ V [2]

[Total: 3]

- 10 (a) A coil of insulated wire is wound on a copper core, as illustrated in Fig. 10.1.

Fig. 10.1

An alternating current is passed through the coil.

The heating effect of the current in the coil is negligible.

Explain why the temperature of the core rises.

.....

.....

.....

.....

.....

..... [4]

- (b) Two hollow tubes of equal length hang vertically as shown in Fig. 10.2.

Fig. 10.2

One tube is made of plastic and the other of aluminium.

Two small similar bar magnets A and B are held above the tubes and then released simultaneously.

The magnets do not touch the sides of the tubes.

Explain why magnet B takes much longer than magnet A to fall through the tube.

.....

.....

.....

.....

.....

.....

..... [5]

[Total: 9]

- 11 The variation with time t of the sinusoidal current I in a resistor of resistance $450\ \Omega$ is shown in Fig. 11.1.

Fig. 11.1

Use data from Fig. 11.1 to determine, for the time $t = 0$ to $t = 30$ ms,

- (a) the frequency of the current,

frequency = ... Hz [2]

- (b) the mean current,

mean current = ... A [1]

- (c) the root-mean-square (r.m.s.) current,

r.m.s. current = ... A [2]

(d) the energy dissipated by the resistor.

energy = ...J [2]

[Total: 7]

12 Some of the electron energy bands in a solid are illustrated in Fig. 12.1.

Fig. 12.1

- (a)** In isolated atoms, electron energy levels have discrete values.
Suggest why, in a solid, there are energy bands, rather than discrete energy levels.

.....

.....

.....

..... [3]

- (b)** A light-dependent resistor (LDR) consists of an intrinsic semiconductor.

Use band theory to explain the dependence on light intensity of the resistance of the LDR when it is at constant temperature.

.....

.....

.....

.....

.....

..... [5]

[Total: 8]

13 Copper-66 is a radioactive isotope.

When a nucleus of copper-66 decays, the emissions include a β^- particle and a γ -ray photon.

The count rate produced from a sample of the isotope copper-66 is measured using a detector and counter, as illustrated in Fig. 13.1.

Fig. 13.1

- (a)** State three reasons why the activity of the sample of copper-66 is not equal to the measured count rate.

1.
2.
3.

[3]

- (b) In a time of 42.0 minutes, the count rate from the sample of copper-66 is found to decrease from $3.62 \times 10^4 \text{ Bq}$ to $1.21 \times 10^2 \text{ Bq}$.

Calculate the half-life of copper-66.

half-life = ... minutes [2]

- (c) The γ -ray photons emitted from radioactive nuclei have specific energies, dependent on the nucleus emitting the photons.

By comparison with emission line spectra, suggest what can be deduced about energy levels in nuclei.

.....

..... [1]
