2 hours

You must answer on the question paper.

No additional materials are needed.

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

- The total mark for this paper is 100.
- The number of marks for each question or part question is shown in brackets [].

This document has **28** pages. Blank pages are indicated.

Data

speed of light in free space	$c = 3.00 \times 10^8 \text{ m s}^{-1}$
permeability of free space	$\mu_0 = 4\pi \times 10^{-7} \text{ H m}^{-1}$
permittivity of free space	$\epsilon_0 = 8.85 \times 10^{-12} \text{ F m}^{-1}$
	$(\frac{1}{4\pi\epsilon_0} = 8.99 \times 10^9 \text{ m F}^{-1})$
elementary charge	$e = 1.60 \times 10^{-19} \text{ C}$
the Planck constant	$h = 6.63 \times 10^{-34} \text{ J s}$
unified atomic mass unit	$1 \text{ u} = 1.66 \times 10^{-27} \text{ kg}$
rest mass of electron	$m_e = 9.11 \times 10^{-31} \text{ kg}$
rest mass of proton	$m_p = 1.67 \times 10^{-27} \text{ kg}$
molar gas constant	$R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$
the Avogadro constant	$N_A = 6.02 \times 10^{23} \text{ mol}^{-1}$
the Boltzmann constant	$k = 1.38 \times 10^{-23} \text{ J K}^{-1}$
gravitational constant	$G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$
acceleration of free fall	$g = 9.81 \text{ m s}^{-2}$

Formulae

uniformly accelerated motion	$s = ut + \frac{1}{2}at^2$ $v^2 = u^2 + 2as$
work done on/by a gas	$W = p\Delta V$
gravitational potential	$\phi = -\frac{Gm}{r}$
hydrostatic pressure	$p = \rho gh$
pressure of an ideal gas	$p = \frac{1}{3} \frac{Nm}{V} \langle c^2 \rangle$
simple harmonic motion	$a = -\omega^2 x$
velocity of particle in s.h.m.	$v = v_0 \cos \omega t$ $v = \pm \omega \sqrt{(x_0^2 - x^2)}$
Doppler effect	$f_o = \frac{f_s v}{v \pm v_s}$
electric potential	$V = \frac{Q}{4\pi\epsilon_0 r}$
capacitors in series	$1/C = 1/C_1 + 1/C_2 + \dots$
capacitors in parallel	$C = C_1 + C_2 + \dots$
energy of charged capacitor	$W = \frac{1}{2} QV$
electric current	$I = Anvq$
resistors in series	$R = R_1 + R_2 + \dots$
resistors in parallel	$1/R = 1/R_1 + 1/R_2 + \dots$
Hall voltage	$V_H = \frac{BI}{ntq}$
alternating current/voltage	$x = x_0 \sin \omega t$
radioactive decay	$x = x_0 \exp(-\lambda t)$
decay constant	$\lambda = \frac{0.693}{t_{\frac{1}{2}}}$

Answer **all** the questions in the spaces provided.

- 1 (a) State what is meant by a *gravitational force*.

.....
 [1]

- (b) A binary star system consists of two stars S_1 and S_2 , each in a circular orbit.

The orbit of each star in the system has a period of rotation T .

Observations of the binary star from Earth are represented in Fig. 1.1.

Fig. 1.1 (not to scale)

Observed from Earth, the angular separation of the centres of S_1 and S_2 is 1.2×10^{-5} rad. The distance of the binary star system from Earth is 1.5×10^{17} m.

Show that the separation d of the centres of S_1 and S_2 is 1.8×10^{12} m.

[1]

- (c) The stars S_1 and S_2 rotate with the same angular velocity ω about a point P, as illustrated in Fig. 1.2.

Fig. 1.2 (not to scale)

Point P is at a distance x from the centre of star S_1 . The period of rotation of the stars is 44.2 years.

- (i) Calculate the angular velocity ω .

$$\omega = \dots\dots\dots \text{rad s}^{-1} \quad [2]$$

- (ii) By considering the forces acting on the two stars, show that the ratio of the masses of the stars is given by

$$\frac{\text{mass of } S_1}{\text{mass of } S_2} = \frac{d-x}{x}.$$

[2]

- (iii) The mass M_1 of star S_1 is given by the expression

$$GM_1 = d^2(d-x)\omega^2$$

where G is the gravitational constant.

The ratio in (ii) is found to be 1.5.

Use data from (b) and your answer in (c)(i) to determine the mass M_1 .

$$M_1 = \dots\dots\dots \text{ kg [3]}$$

[Total: 9]

- 2 (a) State what is meant by the *internal energy* of a system.

.....

.....

.....

..... [2]

- (b) By reference to intermolecular forces, explain why the change in internal energy of an ideal gas is equal to the change in total kinetic energy of its molecules.

.....

.....

..... [2]

- (c) State and explain the change, if any, in the internal energy of a solid metal ball as it falls under gravity in a vacuum.

.....

.....

.....

..... [3]

[Total: 7]

- 3 The piston in the cylinder of a car engine moves in the cylinder with simple harmonic motion. The piston moves between a position of maximum height in the cylinder to a position of minimum height, as illustrated in Fig. 3.1.

Fig. 3.1

The distance moved by the piston between the positions shown in Fig. 3.1 is 9.8 cm.

The mass of the piston is 640 g.

At one particular speed of the engine, the piston completes 2700 oscillations in 1.0 minute.

(a) For the oscillations of the piston in the cylinder, determine:

(i) the amplitude

amplitude = ... cm [1]

(ii) the frequency

frequency = ... Hz [1]

(iii) the maximum speed

maximum speed = ... ms^{-1} [2]

- (iv) the speed when the top of the piston is 2.3 cm below its maximum height.

speed = ... ms^{-1} [2]

- (b) The acceleration of the piston varies.

Determine the resultant force on the piston that gives rise to its maximum acceleration.

force = ... N [3]

[Total: 9]

- 4 (a) (i) By reference to an ultrasound wave, explain what is meant by *specific acoustic impedance*.

.....

 [2]

- (ii) An ultrasound wave is incident normally on the boundary between two media. The media have specific acoustic impedances Z_1 and Z_2 .

State how the ratio

$$\frac{\text{intensity of ultrasound reflected from boundary}}{\text{intensity of ultrasound incident on boundary}}$$

depends on the relative magnitudes of Z_1 and Z_2 .

.....

 [2]

- (b) (i) State what is meant by the *attenuation* of an ultrasound wave.

.....
 [1]

- (ii) A parallel beam of ultrasound is passing through a medium. The incident intensity I_0 is reduced to $0.35I_0$ on passing through a thickness of 0.046 m of the medium.

Calculate the linear attenuation coefficient μ of the ultrasound beam in the medium.

$$\mu = \dots\dots\dots \text{m}^{-1} \quad [2]$$

[Total: 7]

- 5 (a) State **one** similarity and **one** difference between the fields of force produced by an isolated point charge and by an isolated point mass.

similarity:

.....

difference:

.....

[2]

- (b) An isolated solid metal sphere A of radius R has charge $+Q$, as illustrated in Fig. 5.1.

Fig. 5.1

A point P is distance $2R$ from the surface of the sphere.

Determine an expression that includes the terms R and Q for the electric field strength E at point P.

$E =$ [2]

- (c) A second identical solid metal sphere B is now placed near sphere A. The centres of the spheres are separated by a distance $6R$, as shown in Fig. 5.2.

Fig. 5.2

Point P lies midway between spheres A and B.

Sphere B has charge $-Q$.

Explain why:

- (i) the magnitude of the electric field strength at P is given by the sum of the magnitudes of the field strengths due to each sphere

.....
 [1]

- (ii) the electric field strength at point P due to the charged metal spheres is not, in practice, equal to $2E$, where E is the electric field strength determined in (b).

.....

 [2]

[Total: 7]

- 6 (a) The transmission of signals using optic fibres has, to a great extent, replaced the use of coaxial cables.

Advantages of optic fibres include greater bandwidth and very little crosslinking.

- (i) Suggest an advantage of greater bandwidth.

.....
 [1]

- (ii) State what is meant by *crosslinking*.

.....

 [2]

- (b) In telecommunications, a signal power of 1.0 mW is used as a reference power. Signal powers relative to this reference power and expressed in dB are said to be measured in 'dBm'.

Show that a signal power of 13 dBm is equivalent to 20 mW.

[2]

- (c) A signal of input power 20 mW is transmitted along an optic fibre for an uninterrupted distance of 45 km.

The optic fibre has an attenuation per unit length of 0.18 dB km^{-1} .

Calculate the output power P from the optic fibre.

$P = \dots\dots\dots \text{ mW}$ [2]

[Total: 7]

[Turn over]

- 7 The output of a microphone is processed using a non-inverting amplifier. The amplifier incorporates an operational amplifier (op-amp).

(a) State, by reference to the input and output signals, the function of a non-inverting amplifier.

.....

 [2]

(b) The circuit for the microphone and amplifier is shown in Fig. 7.1.

Fig. 7.1

The output potential difference V_{OUT} is 2.6 V when the potential at point P is 84 mV.

Determine:

- (i) the gain of the amplifier circuit

gain = ... [1]

- (ii) the resistance of resistor R.

resistance = ... Ω [2]

- (c) For the circuit of Fig. 7.1:

- (i) suggest a suitable device to connect to the output such that the shape of the waveform of the sound received by the microphone may be examined

..... [1]

- (ii) state and explain the effect on the output potential difference V_{OUT} of increasing the resistance of resistor R.

.....

.....

..... [2]

[Total: 8]

- 8 (a) Define the *tesla*.

.....

.....

.....

..... [3]

- (b) A magnet produces a uniform magnetic field of flux density B in the space between its poles.

A rigid copper wire carrying a current is balanced on a pivot. Part PQLM of the wire is between the poles of the magnet, as illustrated in Fig. 8.1.

Fig. 8.1 (not to scale)

The wire is balanced horizontally by means of a small weight W .

The section of the wire between the poles of the magnet is shown in Fig. 8.2.

Fig. 8.2 (not to scale)

Explain why:

- (i) section QL of the wire gives rise to a moment about the pivot

.....

.....

.....

..... [3]

- (ii) sections PQ and LM of the wire do not affect the equilibrium of the wire.

.....

.....

.....

..... [2]

- (c) Section QL of the wire has length 0.85 cm.

The perpendicular distance of QL from the pivot is 5.6 cm.

When the current in the wire is changed by 1.2 A, W is moved a distance of 2.6 cm along the wire in order to restore equilibrium. The mass of W is 1.3×10^{-4} kg.

- (i) Show that the change in moment of W about the pivot is 3.3×10^{-5} N m.

[2]

- (ii) Use the information in (i) to determine the magnetic flux density B between the poles of the magnet.

$B = \dots\dots\dots$ T [3]

[Total: 13]

BLANK PAGE

- 9 (a) A coil of wire is situated in a uniform magnetic field of flux density B . The coil has diameter 3.6 cm and consists of 350 turns of wire, as illustrated in Fig. 9.1.

Fig. 9.1

The variation with time t of B is shown in Fig. 9.2.

Fig. 9.2

- (i) Show that, for the time $t = 0$ to time $t = 0.20$ s, the electromotive force (e.m.f.) induced in the coil is 0.080 V.

[2]

- (ii) On the axes of Fig. 9.3, show the variation with time t of the induced e.m.f. E for time $t = 0$ to time $t = 0.80$ s.

Fig. 9.3

- (b) A bar magnet is held a small distance above the surface of an aluminium disc by means of a rod, as illustrated in Fig. 9.4.

Fig. 9.4

The aluminium disc is supported horizontally and held stationary.

The magnet is rotated about a vertical axis at constant speed.

Use laws of electromagnetic induction to explain why there is a torque acting on the aluminium disc.

.....

.....

.....

.....

.....

..... [4]

[Total: 10]

- 10 (a) White light passes through a cloud of cool low-pressure gas, as illustrated in Fig. 10.1.

Fig. 10.1

For light that has passed through the gas, its continuous spectrum is seen to contain a number of darker lines.

Use the concept of discrete electron energy levels to explain the existence of these darker lines.

.....

.....

.....

.....

.....

..... [4]

(b) The uppermost electron energy bands in a solid are illustrated in Fig. 10.2.

Fig. 10.2

Use band theory to explain the dependence on light intensity of the resistance of a light-dependent resistor (LDR).

.....

.....

.....

.....

.....

.....

..... [5]

[Total: 9]

- 11 An electron, at rest, has mass m_e and charge $-q$.

A positron is a particle that, at rest, has mass m_e and charge $+q$.

A positron interacts with an electron. The electron and the positron may be considered to be at rest.

The outcome of this interaction is that the electron and the positron become two gamma-ray (γ -ray) photons, each having the same energy.

- (a) Calculate, for one of the γ -ray photons:

- (i) the photon energy, in J

energy = ... J [2]

- (ii) its momentum.

momentum = ... N s [2]

- (b) State and explain the direction, relative to each other, in which the γ -ray photons are emitted.

.....

 [2]

[Total: 6]

- 12 (a) The decay of a sample of a radioactive isotope is said to be random and spontaneous.

Explain what is meant by the decay being:

- (i) *random*

.....
..... [1]

- (ii) *spontaneous*.

.....
..... [1]

- (b) A radioactive isotope X has a half-life of 1.4 hours.

Initially, a pure sample of this isotope X has an activity of $3.6 \times 10^5 \text{ Bq}$.

Determine the activity of the isotope X in the sample after a time of 2.0 hours.

activity = ... Bq [3]

(c) The variation with time t of the actual activity A of the sample in (b) is shown in Fig. 12.1.

Fig. 12.1

- (i) The initial activity of isotope X in the sample is $3.6 \times 10^5 \text{ Bq}$.

Use information from (b) to sketch, on the axes of Fig. 12.1, the variation with time t of the activity of a pure sample of isotope X. [1]

- (ii) Suggest an explanation for any difference between the actual activity of the sample shown in Fig. 12.1 and the curve you have drawn for the activity of isotope X.

.....

 [2]

You must answer on the question paper.

No additional materials are needed.

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

- The total mark for this paper is 100.
- The number of marks for each question or part question is shown in brackets [].

This document has **20** pages. Blank pages are indicated.

Data

speed of light in free space	$c = 3.00 \times 10^8 \text{ m s}^{-1}$
permeability of free space	$\mu_0 = 4\pi \times 10^{-7} \text{ H m}^{-1}$
permittivity of free space	$\epsilon_0 = 8.85 \times 10^{-12} \text{ F m}^{-1}$
	$(\frac{1}{4\pi\epsilon_0} = 8.99 \times 10^9 \text{ m F}^{-1})$
elementary charge	$e = 1.60 \times 10^{-19} \text{ C}$
the Planck constant	$h = 6.63 \times 10^{-34} \text{ J s}$
unified atomic mass unit	$1 \text{ u} = 1.66 \times 10^{-27} \text{ kg}$
rest mass of electron	$m_e = 9.11 \times 10^{-31} \text{ kg}$
rest mass of proton	$m_p = 1.67 \times 10^{-27} \text{ kg}$
molar gas constant	$R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$
the Avogadro constant	$N_A = 6.02 \times 10^{23} \text{ mol}^{-1}$
the Boltzmann constant	$k = 1.38 \times 10^{-23} \text{ J K}^{-1}$
gravitational constant	$G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$
acceleration of free fall	$g = 9.81 \text{ m s}^{-2}$

Formulae

uniformly accelerated motion	$s = ut + \frac{1}{2}at^2$ $v^2 = u^2 + 2as$
work done on/by a gas	$W = p\Delta V$
gravitational potential	$\phi = -\frac{Gm}{r}$
hydrostatic pressure	$p = \rho gh$
pressure of an ideal gas	$p = \frac{1}{3} \frac{Nm}{V} \langle c^2 \rangle$
simple harmonic motion	$a = -\omega^2 x$
velocity of particle in s.h.m.	$v = v_0 \cos \omega t$ $v = \pm \omega \sqrt{(x_0^2 - x^2)}$
Doppler effect	$f_o = \frac{f_s v}{v \pm v_s}$
electric potential	$V = \frac{Q}{4\pi\epsilon_0 r}$
capacitors in series	$1/C = 1/C_1 + 1/C_2 + \dots$
capacitors in parallel	$C = C_1 + C_2 + \dots$
energy of charged capacitor	$W = \frac{1}{2} QV$
electric current	$I = Anvq$
resistors in series	$R = R_1 + R_2 + \dots$
resistors in parallel	$1/R = 1/R_1 + 1/R_2 + \dots$
Hall voltage	$V_H = \frac{BI}{ntq}$
alternating current/voltage	$x = x_0 \sin \omega t$
radioactive decay	$x = x_0 \exp(-\lambda t)$
decay constant	$\lambda = \frac{0.693}{t_{\frac{1}{2}}}$

Answer **all** the questions in the spaces provided.

- 1 (a) Define *gravitational potential* at a point.

.....

.....

..... [2]

- (b) An isolated solid sphere of radius r may be assumed to have its mass M concentrated at its centre. The magnitude of the gravitational potential at the surface of the sphere is ϕ .

On Fig. 1.1, show the variation of the gravitational potential with distance d from the centre of the sphere for values of d from $d = r$ to $d = 4r$.

Fig. 1.1

[3]

- (c) The sphere in (b) is a planet with radius r of $6.4 \times 10^6 \text{ m}$ and mass M of $6.0 \times 10^{24} \text{ kg}$. The planet has no atmosphere.

A rock of mass $3.4 \times 10^3 \text{ kg}$ moves directly towards the planet. Its distance from the centre of the planet changes from $4r$ to $3r$.

- (i) Calculate the change in gravitational potential energy of the rock.

change = ... J [3]

- (ii) Explain whether the rock's speed increases, decreases or stays the same.

.....

..... [2]

[Total: 10]

- 2 (a) A square box of volume V contains N molecules of an ideal gas. Each molecule has mass m .

Using the kinetic theory of ideal gases, it can be shown that, if all the molecules are moving with speed v at right angles to one face of the box, the pressure p exerted on the face of the box is given by the expression

$$pV = Nm\overline{v^2}. \quad (\text{equation 1})$$

This expression leads to the formula

$$p = \frac{1}{3}\rho\langle c^2 \rangle \quad (\text{equation 2})$$

for the pressure p of an ideal gas, where ρ is the density of the gas and $\langle c^2 \rangle$ is the mean-square speed of the molecules.

Explain how each of the following terms in equation 2 is derived from equation 1:

ρ :

.....

$\frac{1}{3}$:

.....

$\langle c^2 \rangle$:

.....

[4]

- (b) An ideal gas has volume, pressure and temperature as shown in Fig. 2.1.

volume $6.0 \times 10^{-3} \text{ m}^3$ pressure $3.0 \times 10^5 \text{ Pa}$ temperature 17°C

Fig. 2.1

The mass of the gas is 20.7 g.

Calculate the mass of one molecule of the gas.

mass = ... g [4]

[Total: 8]

- 3 By reference to the first law of thermodynamics, state and explain the change, if any, in the internal energy of:

(a) a lump of solid lead as it melts at constant temperature

.....

.....

.....

.....

..... [3]

(b) some gas in a toy balloon when the balloon bursts and no thermal energy enters or leaves the gas.

.....

.....

.....

.....

..... [3]

[Total: 6]

- 4 A dish is made from a section of a hollow glass sphere.

The dish, fixed to a horizontal table, contains a small solid ball of mass 45 g, as shown in Fig. 4.1.

Fig. 4.1

The horizontal displacement of the ball from the centre C of the dish is x .

Initially, the ball is held at rest with distance $x = 3.0$ cm.

The ball is then released. The variation with time t of the horizontal displacement x of the ball from point C is shown in Fig. 4.2.

Fig. 4.2

The motion of the ball in the dish is simple harmonic with its acceleration a given by the expression

$$a = -\left(\frac{g}{R}\right)x$$

where g is the acceleration of free fall and R is a constant that depends on the dimensions of the dish and the ball.

- (a) Use Fig. 4.2 to show that the angular frequency ω of oscillation of the ball in the dish is 2.9rad s^{-1} .

[1]

- (b) Use the information in (a) to:

- (i) determine R

$R = \dots\dots\dots \text{ m [2]}$

- (ii) calculate the speed of the ball as it passes over the centre C of the dish.

speed = $\dots\dots\dots \text{ m s}^{-1} \text{ [2]}$

- (c) Some moisture collects on the surface of the dish so that the motion of the ball becomes lightly damped.

On the axes of Fig. 4.2, draw a line to show the lightly damped motion of the ball for the first 5.0 s after the release of the ball. [3]

[Total: 8]

- 5 (a) Explain the principles of the **detection** of ultrasound waves for medical diagnosis.

.....

.....

.....

.....

.....

.....

.....

..... [4]

- (b) By reference to specific acoustic impedance, explain why there is very little transmission of ultrasound waves from air into skin.

.....

.....

.....

.....

.....

..... [3]

[Total: 7]

- 6 (a) Telephone signals may be transmitted either by means of an optic fibre or by means of a wire pair.

State **three** advantages of the use of an optic fibre rather than a wire pair.

1.

 2.

 3.
 [3]

- (b) It is proposed to transmit a signal over a distance of 4.5×10^3 km by means of an optic fibre.

The input signal has a power of 9.8 mW.

The minimum signal that can be detected at the output has a power of 6.3×10^{-17} W. For this signal power, the signal-to-noise ratio is 21 dB.

Calculate:

- (i) the power of the background noise

power = ... W [2]

- (ii) the maximum attenuation per unit length of the optic fibre that allows for uninterrupted transmission of the signal.

attenuation per unit length = ... dB km⁻¹ [2]

[Total: 7]

[Turn over]

- 7 A metal sphere of radius R is isolated in space.

Point P is a distance x from the centre of the sphere, as illustrated in Fig. 7.1.

Fig. 7.1

The variation with distance x of the electric field strength E due to the charge on the sphere is shown in Fig. 7.2.

Fig. 7.2

- (a) State what is meant by *electric field strength*.

.....

.....

..... [2]

- (b) (i) Use Fig. 7.2 to determine the radius R of the sphere. Explain your working.

$R = \dots\dots\dots$ cm [2]

- (ii) Use Fig. 7.2 to determine the charge Q on the sphere.

$Q = \dots\dots\dots$ C [3]

- (c) An α -particle is situated a distance 8.0 cm from the centre of the sphere.

Calculate the acceleration of the α -particle.

acceleration = $\dots\dots\dots$ ms⁻² [3]

[Total: 10]

- 8 (a) An ideal operational amplifier (op-amp) is connected to a load resistor. The op-amp is assumed to have infinite bandwidth and zero output resistance.

State:

- (i) what is meant by *infinite bandwidth*

.....
 [1]

- (ii) the effect, if any, on the output voltage of increasing the load resistance.

.....
 [1]

- (b) A student designs the circuit shown in Fig. 8.1 in order to indicate changes in temperature of the thermistor T.

Fig. 8.1

- (i) Explain why point P is known as a *virtual earth*.

.....

 [3]

- (ii) Calculate the potential at point Q.

potential = ... V [2]

- (iii) At a temperature of 13°C , the resistance of the thermistor T is $230\text{ k}\Omega$.

Show that the potential difference measured with the voltmeter is 0.88 V .

[2]

- (c) The resistance of the thermistor T in (b) decreases as its temperature rises.

Explain the effect of this change in temperature on the potential difference measured with the voltmeter.

.....

 [2]

[Total: 11]

- 9 (a) An electron is travelling at speed v in a straight line in a vacuum. It enters a uniform magnetic field of flux density $8.0 \times 10^{-4} \text{ T}$. Initially, the electron is travelling at right angles to the magnetic field, as illustrated in Fig. 9.1.

Fig. 9.1

The path of the electron in the magnetic field is an arc of a circle of radius 6.4 cm.

- (i) State and explain the direction of the magnetic field.

.....

.....

..... [2]

- (ii) Show that the speed v of the electron is $9.0 \times 10^6 \text{ m s}^{-1}$.

[3]

- (b) A uniform electric field is now applied in the same region as the magnetic field.

The electron passes undeviated through the region of the two fields, as illustrated in Fig. 9.2.

Fig. 9.2

- (i) On Fig. 9.2, mark with an arrow the direction of the uniform electric field. [1]
- (ii) Use data from (a) to calculate the magnitude of the electric field strength.

field strength = ... NC^{-1} [2]

- (c) The electron in (b) is now replaced by an α -particle travelling at the same speed v along the same initial path as the electron.

Describe and explain the shape of the path in the region of the magnetic and electric fields.

.....

.....

..... [2]

[Total: 10]

- 10 (a) State Faraday's law of electromagnetic induction.

.....

.....

..... [2]

- (b) A simple iron-cored transformer is illustrated in Fig. 10.1.

Fig. 10.1

- (i) State **one** function of a transformer.

.....

..... [1]

- (ii) A sinusoidal alternating current in the primary coil gives rise to a varying magnetic flux linking the secondary coil.

Use Faraday's law to explain why the output from the transformer is an electromotive force (e.m.f.) that is alternating.

.....

.....

.....

.....

..... [3]

- (iii) State why the soft-iron core of the transformer is laminated.

.....

..... [1]

[Total: 7]

- 11 (a) The uppermost energy bands in a solid are known as the valence band (VB), the forbidden band (FB) and the conduction band (CB).

A copper wire is at room temperature.

Use band theory to explain why the resistance of the copper wire increases as its temperature increases.

.....

.....

.....

.....

.....

.....

..... [4]

- (b) The structure of a copper crystal is to be examined using electron diffraction.

Electrons, having been accelerated from rest through a potential difference V , are incident on the crystal.

The de Broglie wavelength λ of the electrons is $2.6 \times 10^{-11} \text{ m}$.

Calculate the accelerating potential difference V .

$V = \dots\dots\dots V$ [4]

[Total: 8]

- 12 (a) State what is meant by the *mass defect* of a nucleus.

.....

.....

..... [2]

- (b) Some masses are shown in Table 12.1.

Table 12.1

	mass/u
proton ${}^1_1\text{p}$	1.007 276
neutron ${}^1_0\text{n}$	1.008 665
helium-4 (${}^4_2\text{He}$) nucleus	4.001 506

Show that:

- (i) the energy equivalence of 1.00 u is 934 MeV

[2]

- (ii) the binding energy per nucleon of a helium-4 nucleus is 7.09 MeV.

[2]

- (c) Isotopes of hydrogen have binding energies per nucleon of less than 3 MeV.

Suggest why a nucleus of helium-4 does not spontaneously break down to become nuclei of hydrogen.

.....

May/June 2020

2 hours

You must answer on the question paper.

No additional materials are needed.

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

- The total mark for this paper is 100.
- The number of marks for each question or part question is shown in brackets [].

This document has **28** pages. Blank pages are indicated.

Data

speed of light in free space	$c = 3.00 \times 10^8 \text{ m s}^{-1}$
permeability of free space	$\mu_0 = 4\pi \times 10^{-7} \text{ H m}^{-1}$
permittivity of free space	$\epsilon_0 = 8.85 \times 10^{-12} \text{ F m}^{-1}$
	$(\frac{1}{4\pi\epsilon_0} = 8.99 \times 10^9 \text{ m F}^{-1})$
elementary charge	$e = 1.60 \times 10^{-19} \text{ C}$
the Planck constant	$h = 6.63 \times 10^{-34} \text{ J s}$
unified atomic mass unit	$1 \text{ u} = 1.66 \times 10^{-27} \text{ kg}$
rest mass of electron	$m_e = 9.11 \times 10^{-31} \text{ kg}$
rest mass of proton	$m_p = 1.67 \times 10^{-27} \text{ kg}$
molar gas constant	$R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$
the Avogadro constant	$N_A = 6.02 \times 10^{23} \text{ mol}^{-1}$
the Boltzmann constant	$k = 1.38 \times 10^{-23} \text{ J K}^{-1}$
gravitational constant	$G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$
acceleration of free fall	$g = 9.81 \text{ m s}^{-2}$

Formulae

uniformly accelerated motion	$s = ut + \frac{1}{2}at^2$ $v^2 = u^2 + 2as$
work done on/by a gas	$W = p\Delta V$
gravitational potential	$\phi = -\frac{Gm}{r}$
hydrostatic pressure	$p = \rho gh$
pressure of an ideal gas	$p = \frac{1}{3} \frac{Nm}{V} \langle c^2 \rangle$
simple harmonic motion	$a = -\omega^2 x$
velocity of particle in s.h.m.	$v = v_0 \cos \omega t$ $v = \pm \omega \sqrt{(x_0^2 - x^2)}$
Doppler effect	$f_o = \frac{f_s v}{v \pm v_s}$
electric potential	$V = \frac{Q}{4\pi\epsilon_0 r}$
capacitors in series	$1/C = 1/C_1 + 1/C_2 + \dots$
capacitors in parallel	$C = C_1 + C_2 + \dots$
energy of charged capacitor	$W = \frac{1}{2} QV$
electric current	$I = Anvq$
resistors in series	$R = R_1 + R_2 + \dots$
resistors in parallel	$1/R = 1/R_1 + 1/R_2 + \dots$
Hall voltage	$V_H = \frac{BI}{ntq}$
alternating current/voltage	$x = x_0 \sin \omega t$
radioactive decay	$x = x_0 \exp(-\lambda t)$
decay constant	$\lambda = \frac{0.693}{t_{\frac{1}{2}}}$

Answer **all** the questions in the spaces provided.

- 1 (a) State what is meant by a *gravitational force*.

.....
 [1]

- (b) A binary star system consists of two stars S_1 and S_2 , each in a circular orbit.

The orbit of each star in the system has a period of rotation T .

Observations of the binary star from Earth are represented in Fig. 1.1.

Fig. 1.1 (not to scale)

Observed from Earth, the angular separation of the centres of S_1 and S_2 is 1.2×10^{-5} rad. The distance of the binary star system from Earth is 1.5×10^{17} m.

Show that the separation d of the centres of S_1 and S_2 is 1.8×10^{12} m.

[1]

- (c) The stars S_1 and S_2 rotate with the same angular velocity ω about a point P, as illustrated in Fig. 1.2.

Fig. 1.2 (not to scale)

Point P is at a distance x from the centre of star S_1 . The period of rotation of the stars is 44.2 years.

- (i) Calculate the angular velocity ω .

$$\omega = \dots \text{ rad s}^{-1} \quad [2]$$

- (ii) By considering the forces acting on the two stars, show that the ratio of the masses of the stars is given by

$$\frac{\text{mass of } S_1}{\text{mass of } S_2} = \frac{d-x}{x}.$$

[2]

- (iii) The mass M_1 of star S_1 is given by the expression

$$GM_1 = d^2(d-x)\omega^2$$

where G is the gravitational constant.

The ratio in (ii) is found to be 1.5.

Use data from (b) and your answer in (c)(i) to determine the mass M_1 .

$$M_1 = \dots\dots\dots \text{ kg [3]}$$

[Total: 9]

- 2 (a) State what is meant by the *internal energy* of a system.

.....

.....

.....

..... [2]

- (b) By reference to intermolecular forces, explain why the change in internal energy of an ideal gas is equal to the change in total kinetic energy of its molecules.

.....

.....

..... [2]

- (c) State and explain the change, if any, in the internal energy of a solid metal ball as it falls under gravity in a vacuum.

.....

.....

.....

..... [3]

[Total: 7]

- 3 The piston in the cylinder of a car engine moves in the cylinder with simple harmonic motion. The piston moves between a position of maximum height in the cylinder to a position of minimum height, as illustrated in Fig. 3.1.

Fig. 3.1

The distance moved by the piston between the positions shown in Fig. 3.1 is 9.8 cm.

The mass of the piston is 640 g.

At one particular speed of the engine, the piston completes 2700 oscillations in 1.0 minute.

(a) For the oscillations of the piston in the cylinder, determine:

(i) the amplitude

amplitude = ... cm [1]

(ii) the frequency

frequency = ... Hz [1]

(iii) the maximum speed

maximum speed = ... ms^{-1} [2]

- (iv) the speed when the top of the piston is 2.3 cm below its maximum height.

speed = ... ms^{-1} [2]

- (b) The acceleration of the piston varies.

Determine the resultant force on the piston that gives rise to its maximum acceleration.

force = ... N [3]

[Total: 9]

- 4 (a) (i) By reference to an ultrasound wave, explain what is meant by *specific acoustic impedance*.

.....

 [2]

- (ii) An ultrasound wave is incident normally on the boundary between two media. The media have specific acoustic impedances Z_1 and Z_2 .

State how the ratio

$$\frac{\text{intensity of ultrasound reflected from boundary}}{\text{intensity of ultrasound incident on boundary}}$$

depends on the relative magnitudes of Z_1 and Z_2 .

.....

 [2]

- (b) (i) State what is meant by the *attenuation* of an ultrasound wave.

.....
 [1]

- (ii) A parallel beam of ultrasound is passing through a medium. The incident intensity I_0 is reduced to $0.35I_0$ on passing through a thickness of 0.046 m of the medium.

Calculate the linear attenuation coefficient μ of the ultrasound beam in the medium.

$$\mu = \dots\dots\dots \text{m}^{-1} \quad [2]$$

[Total: 7]

- 5 (a) State **one** similarity and **one** difference between the fields of force produced by an isolated point charge and by an isolated point mass.

similarity:

.....

difference:

.....

[2]

- (b) An isolated solid metal sphere A of radius R has charge $+Q$, as illustrated in Fig. 5.1.

Fig. 5.1

A point P is distance $2R$ from the surface of the sphere.

Determine an expression that includes the terms R and Q for the electric field strength E at point P.

$E =$ [2]

- (c) A second identical solid metal sphere B is now placed near sphere A. The centres of the spheres are separated by a distance $6R$, as shown in Fig. 5.2.

Fig. 5.2

Point P lies midway between spheres A and B.

Sphere B has charge $-Q$.

Explain why:

- (i) the magnitude of the electric field strength at P is given by the sum of the magnitudes of the field strengths due to each sphere

.....
 [1]

- (ii) the electric field strength at point P due to the charged metal spheres is not, in practice, equal to $2E$, where E is the electric field strength determined in (b).

.....

 [2]

[Total: 7]

- 6 (a) The transmission of signals using optic fibres has, to a great extent, replaced the use of coaxial cables.

Advantages of optic fibres include greater bandwidth and very little crosslinking.

- (i) Suggest an advantage of greater bandwidth.

.....
 [1]

- (ii) State what is meant by *crosslinking*.

.....

 [2]

- (b) In telecommunications, a signal power of 1.0 mW is used as a reference power. Signal powers relative to this reference power and expressed in dB are said to be measured in 'dBm'.

Show that a signal power of 13 dBm is equivalent to 20 mW.

[2]

- (c) A signal of input power 20 mW is transmitted along an optic fibre for an uninterrupted distance of 45 km.

The optic fibre has an attenuation per unit length of 0.18 dB km^{-1} .

Calculate the output power P from the optic fibre.

$P = \dots\dots\dots \text{ mW}$ [2]

[Total: 7]

[Turn over]

- 7 The output of a microphone is processed using a non-inverting amplifier. The amplifier incorporates an operational amplifier (op-amp).

(a) State, by reference to the input and output signals, the function of a non-inverting amplifier.

.....

 [2]

(b) The circuit for the microphone and amplifier is shown in Fig. 7.1.

Fig. 7.1

The output potential difference V_{OUT} is 2.6 V when the potential at point P is 84 mV.

Determine:

(i) the gain of the amplifier circuit

gain = ... [1]

- (ii) the resistance of resistor R.

resistance = ... Ω [2]

- (c) For the circuit of Fig. 7.1:

- (i) suggest a suitable device to connect to the output such that the shape of the waveform of the sound received by the microphone may be examined

..... [1]

- (ii) state and explain the effect on the output potential difference V_{OUT} of increasing the resistance of resistor R.

.....

.....

..... [2]

[Total: 8]

- 8 (a) Define the *tesla*.

.....

.....

.....

..... [3]

- (b) A magnet produces a uniform magnetic field of flux density B in the space between its poles.

A rigid copper wire carrying a current is balanced on a pivot. Part PQLM of the wire is between the poles of the magnet, as illustrated in Fig. 8.1.

Fig. 8.1 (not to scale)

The wire is balanced horizontally by means of a small weight W .

The section of the wire between the poles of the magnet is shown in Fig. 8.2.

Fig. 8.2 (not to scale)

Explain why:

- (i) section QL of the wire gives rise to a moment about the pivot

.....

.....

.....

..... [3]

- (ii) sections PQ and LM of the wire do not affect the equilibrium of the wire.

.....

.....

.....

..... [2]

- (c) Section QL of the wire has length 0.85 cm.

The perpendicular distance of QL from the pivot is 5.6 cm.

When the current in the wire is changed by 1.2 A, W is moved a distance of 2.6 cm along the wire in order to restore equilibrium. The mass of W is 1.3×10^{-4} kg.

- (i) Show that the change in moment of W about the pivot is 3.3×10^{-5} N m.

[2]

- (ii) Use the information in (i) to determine the magnetic flux density B between the poles of the magnet.

$B = \dots\dots\dots$ T [3]

[Total: 13]

BLANK PAGE

- 9 (a) A coil of wire is situated in a uniform magnetic field of flux density B . The coil has diameter 3.6 cm and consists of 350 turns of wire, as illustrated in Fig. 9.1.

Fig. 9.1

The variation with time t of B is shown in Fig. 9.2.

Fig. 9.2

- (i) Show that, for the time $t = 0$ to time $t = 0.20$ s, the electromotive force (e.m.f.) induced in the coil is 0.080 V.

[2]

- (ii) On the axes of Fig. 9.3, show the variation with time t of the induced e.m.f. E for time $t = 0$ to time $t = 0.80$ s.

Fig. 9.3

- (b) A bar magnet is held a small distance above the surface of an aluminium disc by means of a rod, as illustrated in Fig. 9.4.

Fig. 9.4

The aluminium disc is supported horizontally and held stationary.

The magnet is rotated about a vertical axis at constant speed.

Use laws of electromagnetic induction to explain why there is a torque acting on the aluminium disc.

[Total: 9]

- 11 An electron, at rest, has mass m_e and charge $-q$.

A positron is a particle that, at rest, has mass m_e and charge $+q$.

A positron interacts with an electron. The electron and the positron may be considered to be at rest.

The outcome of this interaction is that the electron and the positron become two gamma-ray (γ -ray) photons, each having the same energy.

- (a) Calculate, for one of the γ -ray photons:

- (i) the photon energy, in J

energy = ... J [2]

- (ii) its momentum.

momentum = ... N s [2]

- (b) State and explain the direction, relative to each other, in which the γ -ray photons are emitted.

.....

 [2]

[Total: 6]

- 12 (a) The decay of a sample of a radioactive isotope is said to be random and spontaneous.

Explain what is meant by the decay being:

- (i) *random*

.....
..... [1]

- (ii) *spontaneous*.

.....
..... [1]

- (b) A radioactive isotope X has a half-life of 1.4 hours.

Initially, a pure sample of this isotope X has an activity of $3.6 \times 10^5 \text{ Bq}$.

Determine the activity of the isotope X in the sample after a time of 2.0 hours.

activity = ... Bq [3]

(c) The variation with time t of the actual activity A of the sample in (b) is shown in Fig. 12.1.

Fig. 12.1

- (i) The initial activity of isotope X in the sample is $3.6 \times 10^5 \text{ Bq}$.

Use information from (b) to sketch, on the axes of Fig. 12.1, the variation with time t of the activity of a pure sample of isotope X. [1]

- (ii) Suggest an explanation for any difference between the actual activity of the sample shown in Fig. 12.1 and the curve you have drawn for the activity of isotope X.
