These questions belong to Pearson Edexcel, not to us.

The examination questions and mark schemes in this pack were written and published by Pearson Edexcel. They are past assessment materials, reproduced here so that students can revise from them.

What we do not own

STEMUP is not affiliated with Pearson Edexcel and does not own, and makes no claim to own, any of the question or mark scheme material in this pack. Pearson has not endorsed, approved or been involved in the production of it. Pearson, Edexcel and the qualification titles used here belong to their respective owners and appear for identification only.

Where to find the originals

Pearson publishes its past papers and mark schemes free of charge. Always check the current specification at [qualifications.pearson.com](https://www.pearson.com/qualifications) before you revise, because content and wording can change between series.

If you hold the rights to any material in this pack and would like it amended or removed, contact admin@stemup.co.uk and we will act on it.

Q1.

The photograph shows a germinating pollen grain as seen through a light microscope.

(Source: © CAROLINA BIOLOGICAL SUPPLY COMPANY/SCIENCE PHOTO LIBRARY)

The actual length of this pollen tube is 136 μm .

Calculate the magnification of this photograph.

(2)

Answer

(Total for question = 2 marks)

Q2.

A student used a light microscope to determine the mean percentage germination of pollen grains.

The photograph shows one high power field of view observed by the student.

The student used a paintbrush to obtain pollen grains from a flower.

Describe the steps taken by the student to see these pollen grains using a microscope.

(Total for question = 3 marks)

Q3.

Water fleas are small animals that live in pond water.

A student observed a water flea using a light microscope.

The diagram shows the student's drawing of the water flea.

The diagram shows an eyepiece graticule and a stage micrometer used by the student to measure the diameter of the heart in this water flea.

(Source: <http://biology4alevel.blogspot.com/2014/07/2-cell-structure-microscopy.html>)

Each small division on the stage micrometer is 0.01 mm.

The diameter of the heart was found to be 0.2 mm.

Determine the number of eyepiece units that equal the diameter of the water flea heart.

(1)

Answer

(Total for question = 1 mark)

Q4.

A student investigated the effect of light intensity on the development of stomata in coffee plant leaves.

The following method was used:

- young coffee seedlings were separated into two groups
- one group was grown in bright light and the other group was grown in dim light
- leaves were selected from each group and their surfaces were painted with nail varnish
- the nail varnish was allowed to dry and then peeled off the leaf surface
- each nail varnish peel was observed using a light microscope.

The diagram shows an example of the field of view seen by the student when using the high power lens.

The diagram shows one of the stomata drawn by the student.

The actual length of this stoma is 20 μm .

Calculate the magnification of this drawing.

(2)

Answer

(Total for question = 2 marks)

Q5.

A student investigated the effect of light intensity on the development of stomata in coffee plant leaves.

The following method was used:

- young coffee seedlings were separated into two groups

- one group was grown in bright light and the other group was grown in dim light
- leaves were selected from each group and their surfaces were painted with nail varnish
- the nail varnish was allowed to dry and then peeled off the leaf surface
- each nail varnish peel was observed using a light microscope.

The diagram shows an example of the field of view seen by the student when using the high power lens.

Describe how a microscope should be used to observe the stomata using the high power lens.

(Total for question = 3 marks)

A student investigated the effect of light intensity on the development of stomata in coffee plant leaves.

The following method was used:

- young coffee seedlings were separated into two groups
- one group was grown in bright light and the other group was grown in dim light
- leaves were selected from each group and their surfaces were painted with nail varnish
- the nail varnish was allowed to dry and then peeled off the leaf surface
- each nail varnish peel was observed using a light microscope.

The diagram shows an example of the field of view seen by the student when using the high power lens.

The diameter of the field of view is 0.4 mm.

Calculate the number of stomata per mm^2 on the leaf surface.

The area of a circle is πr^2 , where π is 3.142.

(2)

Answer mm^{-2}

(Total for question = 2 marks)

Q7.

Biodiversity is monitored by conservationists.

The photograph shows a hedge.

(Source: © 1000 Words/Shutterstock)

Many fields in the UK are separated by hedges.

Conservationists investigated biodiversity in hedges of different ages.

Hedges of different ages were sampled at random and the number of species of woody plants was counted.

The graph shows the results of this investigation.

The conservationists observed that the plants in older hedges contained more wood than the plants in younger hedges.

Wood consists of xylem tissue.

(i) Give an advantage for older plants of containing more wood.

(1)

.....

.....

.....

.....

(ii) Describe a method to show that the stem of an older plant contains more wood.

(Total for question = 4 marks)

Q8.

A student investigated the effect of light intensity on the development of stomata in coffee plant leaves.

The following method was used:

- young coffee seedlings were separated into two groups
- one group was grown in bright light and the other group was grown in dim light
- leaves were selected from each group and their surfaces were painted with nail varnish
- the nail varnish was allowed to dry and then peeled off the leaf surface
- each nail varnish peel was observed using a light microscope.

The diagram shows an example of the field of view seen by the student when using the high power lens.

The results of this investigation are shown in the table.

Leaf sample	Number of stomata mm ⁻²	
	Leaves in bright light	Leaves in dim light
1	184	143
2	190	138
3	182	140
4	185	132
5	192	136
Mean ($\bar{x}$) and SD	186.6 ± 4.2	137.8

(i) Calculate the SD for the leaves in dim light.

Use the formula

$$SD = \sqrt{\frac{\sum(x - \bar{x})^2}{n - 1}}$$

(2)

Answer

(ii) Describe how these nail varnish peel samples should be taken to allow a valid comparison between the mean numbers of stomata.

(2)

.....

.....

.....

.....

.....

.....

(iii) Analyse the data to explain how fewer stomata might affect the growth of coffee plants.

(3)

(Total for question = 7 marks)

Q9.

A student used a light microscope to determine the mean percentage germination of pollen grains.

The photograph shows one high power field of view observed by the student.

The graph shows the results of the investigation.

(i) Explain why the student plotted standard deviation bars on the graph.

(2)

.....

.....

.....

.....

.....

.....

(ii) Determine the time when the photograph was taken.

(2)

Answer minutes

(Total for question = 4 marks)

Q10.

Sickle cell anaemia is caused by a mutation in the β -globin gene which codes for part of haemoglobin.

The diagram shows the first 10 amino acids in this part of haemoglobin, in a healthy person and in a person with sickle cell anaemia.

Healthy person:	val – his – leu – thr – pro – glu – glu – lys – ser – ala
Person with sickle cell anaemia:	val – his – leu – thr – pro – val – glu – lys – ser – ala

People who are homozygous for the HbS allele develop sickle cell anaemia.

People who are heterozygous for HbS produce both forms of haemoglobin.
These individuals have some sickled red blood cells.

People with the HbS allele are less likely to get malaria.

You are provided with a blood sample from a patient with malaria and a blood sample from a healthy individual.

Devise a method that would allow you to distinguish between the two blood samples.

Q11.

Plant stems contain xylem and phloem, tissues specialised for transport.

The photomicrograph shows a longitudinal section of phloem tissue.

(i) Draw the cell labelled **X**.

(2)

(ii) Explain how phloem tissue is adapted for its function.

Mark Scheme

Q1.

Question Number	Answer	Additional Guidance	Mark
	- length of pollen tube measured from photo (1) - magnification calculated (1)	Length = 33 (mm) Accept 31 – 34 (mm) / 3.1 – 3.4 (cm) Magnification = $\frac{\text{photo size}}{\text{actual size}} = \frac{33\,000}{136}$ = 243 / 242.7 / 242.65x Accept values in the range 227.9 to 250.0 x Units lose mp2 Correct answer with no working gains 2 marks	Grad (2)

Q2.

Question Number	Answer	Mark
	A description that makes reference to three of the following: - pollen grains put in {water / sugar / sucrose / mineral ions / glycerol} solution (1) - use of a (microscope) slide / cavity slide / use a coverslip (1) - use low power lens first / use increasing magnification (1)	(3)

Q3.

Question Number	Answer	Additional Guidance	Mark
	9 / 90		(1)

Q4.

Question Number	Answer	Additional Guidance	Mark
	conversion of mm into μm conversion of μm into mm conversion of μm into cm (1) divide image size by actual size (1)	Correct answer gains full marks, with no working shown $27 \text{ mm} = 27\,000 \mu\text{m} /$ $20 \div 1000 = 0.02 \text{ mm} /$ $20 \div 10\,000 = 0.002 \text{ cm}$ $27\,000 \div 20 = (\times)$ $1350 / 13.5 \times 10^2 /$ 1.35×10^3	(2)

Q5.

Question Number	Answer	Additional Guidance	Mark
	A description that makes reference to three of the following: - locate specimen by using {low power / medium power} objective lens (1) (focus) using {low power / medium power} objective lens before the high power objective lens (1) - only use fine focus with high power lens (1)		(3)

Q6.

Question Number	Answer	Additional Guidance	Mark
	- multiplication (1) - division (1)	$3.142 \times 0.2^2 / 3.142 \times 0.04 =$ $0.126 / 0.1257 /$ 0.12568 $18 \div 0.126 = 143$ Allow one mark if answer is 142.857 / 143.198 / 143.220 Correct answer gains full marks, with no working shown	(2)

Q7.

Question Number	Answer	Additional Guidance	Mark
(i)	An answer that makes reference to one of the following: - stems are {stronger / less likely to break / better supported} (1) - more {mineral ion / water} transport (1)		(1)

Question Number	Answer	Additional Guidance	Mark
(ii)	A description that makes reference to three of the following: - cut thin sections (of the stem) (1) - from same height of stem in young and old plants (1) {use a stain / named stain} to see xylem (1) - measure thickness of xylem tissue (1)	Accept cut a core (if rings are being measured) Measure thickness of {rings / xylem} 1 mark if potometer used in method	(3)

Q8.

Question Number	Answer	Additional Guidance	Mark
(i)	- calculate sum of d^2 and divide (1) - calculate square root (1)	Correct answer gains full marks, with no working shown $68.8 \div 4 = 17.2$ square root of 17.2 = 4.1 / 4.147 / 4.15 One mark for 17.2 / 68.8	(2)

Question Number	Answer	Additional Guidance	Mark
(ii)	A description that makes reference to two of the following: - leaves at {same height / same age} on stem (1) - sample at same stated position of leaf (1) - same surface of leaf (1)	DO NOT ACCEPT same location / same part / same place DO NOT ACCEPT same area / same part / same place	(2)

Question Number	Answer	Additional Guidance	Mark
(iii)	An answer that makes reference to three of the following: (reduced growth) because less carbon dioxide absorbed (1) - therefore less {GP / GALP / glucose / sucrose} (1) - less transpiration so less mineral ions (1) - therefore less named product (1)	ACCEPT converse ACCEPT cellulose / amino acids / protein / chlorophyll / DNA DO NOT ACCEPT starch	(3)

Q9.

Question Number	Answer	Additional Guidance	Mark
(i)	An explanation that makes reference to the following: - shows variation from the mean / shows range of results from mean / spread of data around the mean / shows reproducibility / shows repeatability (1) - therefore gives an indication of significant difference / overlap gives indication of significant difference (1)	ACCEPT average	(2)

Question Number	Answer	Additional Guidance	Mark
(ii)	- divide number germinating by total number (1) - use graph to determine time (1)	<u>Example of calculation</u> $4 \div 11 = 36.36 / 36 / 36.4$ 36.36 is 16 to 18 minutes ACCEPT one mark for 12 to 14 if $3 \div 11$ seen in working	(2)

Q10.

Question Number	Acceptable Answer	Additional Guidance	Mark
	An answer that makes reference to the following: - a small volume of blood is spread into a very thin layer and viewed under a microscope (1) - blood is examined to look for the presence of the malarial parasite <i>Plasmodium</i> (1) - use of appropriate personal protective equipment when handling human blood samples (1)	Ignore references to sickled cells	(3)

Q11.

Question Number	Answer	Additional Guidance	Mark
(i)	An answer that makes reference to the following: - one cell drawn with correct shape / proportion (1) - clear lines used to represent correct shape of cell, with no shading of any feature (1)	Must be a drawing not a diagram	(2)
(ii)	An explanation that makes reference to three of the following: - companion cells for ATP production (1) - because sieve tubes are for transport of organic molecules (1) - because energy is needed for transport (both up and down the stem) (1) - sieve tubes have no organelles, so less barriers to transport (1)	Allow named organic molecule eg {sugar / sucrose} Allow energy needed for active transport (of sugars) Allow sieve tubes have {sieve plates / plasmodesmata} so less barriers to transport	(3)
