Pearson

Clarification Notice

Wednesday 4 June 2025
Pearson Edexcel International A level Physics – WPH15_01

In question 19(b), the final line of the question is incorrect:
'intensity of light received at the surface of Aita = 1360 W m^{-2}'

Please instruct candidates to amend their question paper to:
'intensity of light received at the Earth from the Sun = 1360 W m^{-2}'

We apologise for any confusion caused.

Physics

International Advanced Level
UNIT 5: Thermodynamics, Radiation, Oscillations and Cosmology

You must have:
Scientific calculator, ruler

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- **Show all your working out** in calculations and **include units** where appropriate.

Information

- The total mark for this paper is 90.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- In the question marked with an **asterisk (*)**, marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- The list of data, formulae and relationships is printed at the end of this booklet.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

SECTION A

Answer ALL questions.

For questions 1–10, in Section A, select one answer from A to D and put a cross in the box ☒. If you change your mind, put a line through the box ☒ and then mark your new answer with a cross ☒.

1 Which of the following statements applies to both electric fields and gravitational fields?

☒ **A** Each field causes a force on all particles.

☒ **B** Each field can cause an attractive or repulsive force.

☒ **C** Field strength is proportional to the square of the distance from a point source.

☒ **D** Field strength is inversely proportional to the square of the distance from a point source.

(Total for Question 1 = 1 mark)

2 A mass is driven into oscillation, and resonance takes place.

Which of the following statements is **not** correct?

☒ **A** The amplitude of oscillation of the mass is a maximum.

☒ **B** The frequency of oscillation of the mass is a maximum.

☒ **C** The mass is driven at its natural frequency.

☒ **D** The transfer of energy to the mass is a maximum.

(Total for Question 2 = 1 mark)

3 Energy is released when the fusion of low mass nuclei takes place.
Energy is also released when the fission of high mass nuclei takes place.

Which row of the table shows the change in binding energy per nucleon (B.E. / nucleon) for fusion and fission?

		Nuclear fusion	Nuclear fission
☒	**A**	B.E. / nucleon decreases	B.E. / nucleon decreases
☒	**B**	B.E. / nucleon decreases	B.E. / nucleon increases
☒	**C**	B.E. / nucleon increases	B.E. / nucleon decreases
☒	**D**	B.E. / nucleon increases	B.E. / nucleon increases

4 A megaparsec, Mpc, is a unit of distance used by astronomers.
$1\,\text{Mpc} = 3.1 \times 10^{22}\,\text{m}$

Recent estimates of the Hubble constant give a value of $74\,\text{km}\,\text{s}^{-1}\,\text{Mpc}^{-1}$.

Which of the following gives the age of the universe in seconds?

☒ **A** $\dfrac{74}{3.1 \times 10^{22}}$

☒ **B** $\dfrac{74 \times 10^{3}}{3.1 \times 10^{22}}$

☒ **C** $\dfrac{3.1 \times 10^{22}}{74}$

☒ **D** $\dfrac{3.1 \times 10^{22}}{74 \times 10^{3}}$

(Total for Question 4 = 1 mark)

5 On Earth, hydrogen is observed to emit a spectral line with a wavelength of 410 nm. The same spectral line is observed in the radiation received from a galaxy that is moving away from the Earth at a speed of $0.1c$.

Which of the following is the wavelength of the spectral line in the radiation received from the galaxy?

☒ **A** 451 nm

☒ **B** 430 nm

☒ **C** 410 nm

☒ **D** 369 nm

6 In a laboratory, the background count rate is 22 counts per minute.

A detector is placed 25 cm from a gamma source. The count rate recorded by the detector is 54 counts per minute.

The detector is then placed 50 cm from the source.

Which of the following is the expected number of counts per minute?

☒ **A** $\left(\frac{54 - 22}{2}\right) + 22$

☒ **B** $\left(\frac{54 - 22}{4}\right) + 22$

☒ **C** $\left(\frac{54 + 22}{2}\right) - 22$

☒ **D** $\left(\frac{54 + 22}{4}\right) - 22$

(Total for Question 6 = 1 mark)

7 A student used a detector to determine the intensity of radiation from a source of gamma radiation. After correcting for background, the intensity of radiation recorded by the detector was I_0.

A lead sheet of thickness 2.5 cm was placed between the source and the detector. The corrected intensity of radiation recorded by the detector was now $0.50\,I_0$.

The original lead sheet was replaced by a new lead sheet of thickness 7.5 cm.

Which of the following was the corrected intensity of gamma radiation recorded by the detector?

☒ **A** $0.33\,I_0$

☒ **B** $0.25\,I_0$

☒ **C** $0.13\,I_0$

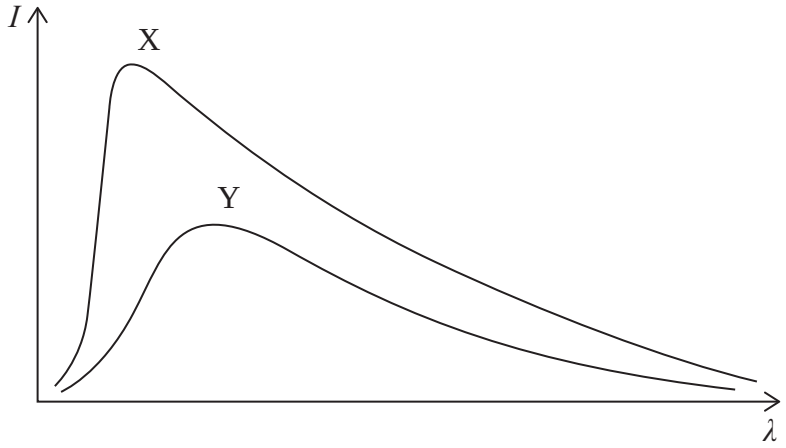

☒ **D** $0.06\,I_0$

8 Two stars, X and Y, have the same luminosity.

The graph shows how the intensity I of radiation received at Earth from star X and star Y varies with wavelength λ.

Which of the following statements can be deduced from the graph?

☒ **A** Star X has a higher surface temperature and is closer than star Y.

☒ **B** Star X has a lower surface temperature and is closer than star Y.

☒ **C** Star X has a higher surface temperature and is further away than star Y.

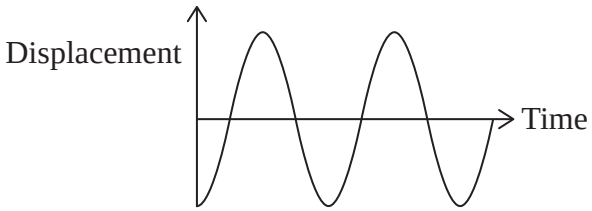

☒ **D** Star X has a lower surface temperature and is further away than star Y.

11 The photograph shows a woman making a bungee jump. The woman was attached to a platform high above the ground by an elastic rope.

(Source: © Pearson Asset Library)

After reaching the lowest point of the bungee jump, the woman oscillated with simple harmonic motion of period 1.50 s.

The woman returned to the platform to repeat the bungee jump. She was fastened to a second person. The same elastic rope was used for the bungee jump.

After reaching the lowest point of the bungee jump, the two people oscillated with simple harmonic motion.

Calculate the period of oscillation of the two people.

mass of woman = 67 kg
mass of second person = 72 kg

Period of oscillation = ...

12 The photograph shows a student observing the tracks of alpha particles and beta particles in a cloud chamber.

(Source: © NASA Archive/Alamy Stock Photo)

The particles ionise the air as they pass through the cloud chamber. Liquid droplets form around the ions and the droplets form visible tracks.

The alpha particle tracks are thick and straight. The beta particle tracks are thin and twisted.

The student gives the following explanation for the appearance of the tracks.

"*The alpha particle tracks are thick because the alpha particles are massive particles. The tracks are straight because the alpha particles are highly ionising.*

The beta particles cause a similar amount of ionisation as the alpha particles. The beta particle tracks are thin and twisted because beta particles are much less massive than alpha particles."

Criticise the student's explanation.
