Pearson Edexcel International Advanced Level

Friday 17 January 2025

Morning (Time: 1 hour 30 minutes)

Paper reference **WPH12/01**

Physics

International Advanced Subsidiary/Advanced Level
UNIT 2: Waves and Electricity

You must have:
Scientific calculator, ruler

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- **Show all your working out** in calculations and **include units** where appropriate.

Information

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- In the question marked with an **asterisk (*)**, marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- The list of data, formulae and relationships is printed at the end of this booklet.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

SECTION A

Answer ALL questions.

For questions 1–10, in Section A, select one answer from A to D and put a cross in the box ☒. If you change your mind, put a line through the box ☒ and then mark your new answer with a cross ☒.

1 The formula for the current I in a conductor is $I = nqvA$.

Which of the following gives the meaning of n?

☒ **A** number of conduction electrons in a wire of length 1 m

☒ **B** number of conduction electrons in $1\,m^3$ of a material

☒ **C** total number of electrons in a wire of length 1 m

☒ **D** total number of electrons in $1\,m^3$ of a material

(Total for Question 1 = 1 mark)

2 There is a current I in a wire. The charge on an electron is e.

Which of the following gives the number of electrons passing a point on the wire in time t?

☒ **A** Ite

☒ **B** $\frac{I}{te}$

☒ **C** $\frac{Ie}{t}$

☒ **D** $\frac{It}{e}$

(Total for Question 2 = 1 mark)

3 A car has a distance sensor that uses a pulse-echo technique to determine the distance between the car and a nearby object.

The sensor emits a pulse of sound and then detects the echo after time t.
The speed of sound is v.

Which of the following gives the distance between the car and the object?

☒ **A** $2vt$

☒ **B** $2vt^{-1}$

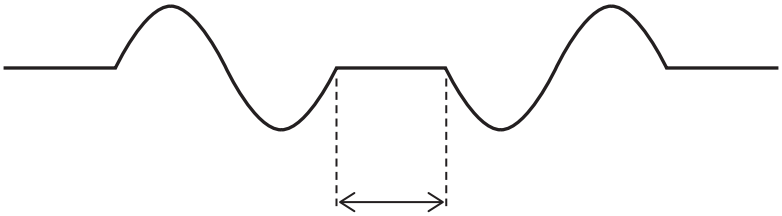

☒ **C** $0.5vt$

☒ **D** $0.5vt^{-1}$

(Total for Question 3 = 1 mark)

5 The circuit shown includes a thermistor.

Which of the following explains the change in the ammeter reading as the temperature of the thermistor decreases?

☒ **A** The number of conduction electrons decreases so the ammeter reading decreases.

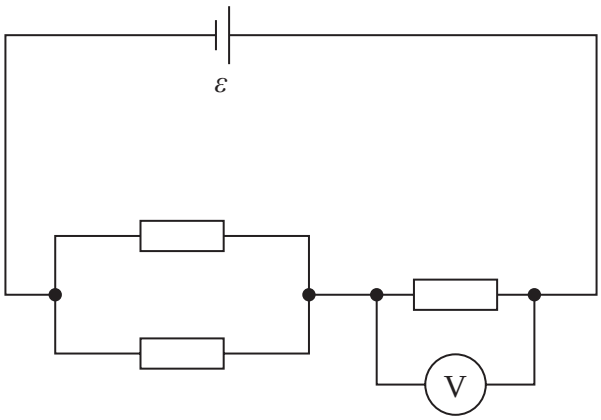

☒ **B** The number of conduction electrons decreases so the ammeter reading increases.

☒ **C** The number of conduction electrons increases so the ammeter reading decreases.

☒ **D** The number of conduction electrons increases so the ammeter reading increases.

(Total for Question 5 = 1 mark)

6 A student connects three identical resistors in the circuit shown.

The cell has e.m.f. ε and negligible internal resistance.

Which of the following is equal to the reading on the voltmeter?

☒ **A** $\frac{\varepsilon}{2}$

☒ **B** $\frac{\varepsilon}{3}$

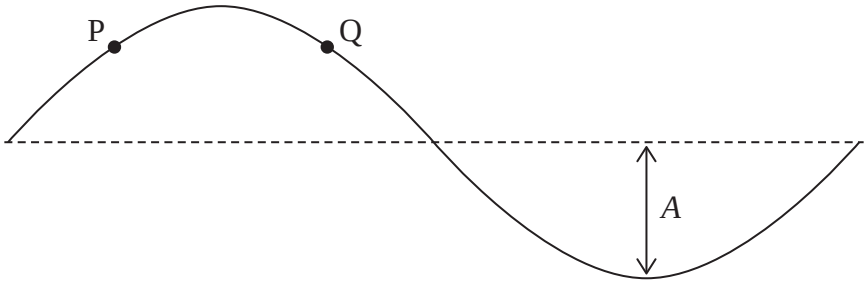

☒ **C** $\frac{2\varepsilon}{3}$

☒ **D** $\frac{3\varepsilon}{2}$

7 The diagram shows a wave of amplitude *A* on a string.
P and Q are two points on the string.

The wave on the string is a stationary wave.

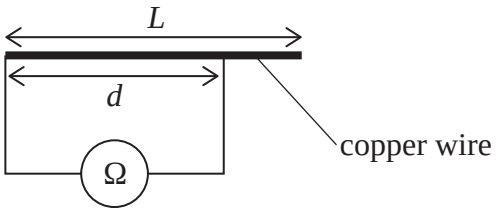

Which row of the table is correct?

		Phase difference between P and Q	Amplitude of oscillation of P and Q
☒	**A**	0°	equal to *A*
☒	**B**	0°	less than *A*
☒	**C**	90°	equal to *A*
☒	**D**	90°	less than *A*

8 A student used an ohmmeter to investigate the resistance of a uniform copper wire of length L, as shown.

Length d of the wire has resistance R.

Which of the following gives the total resistance of the copper wire?

☒ **A** $\frac{d}{L} \times \frac{1}{R}$

☒ **B** $\frac{d}{L} \times R$

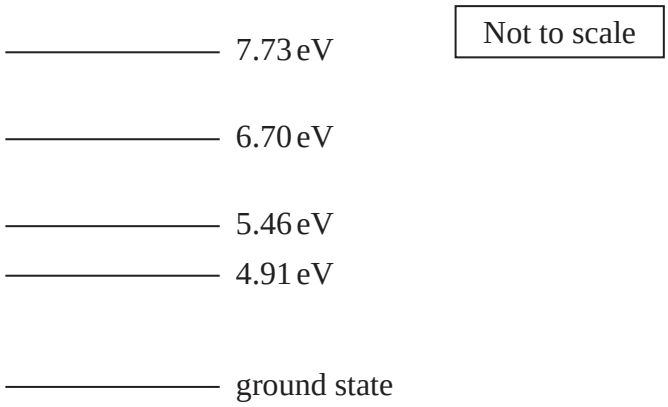

☒ **C** $\frac{L}{d} \times \frac{1}{R}$

☒ **D** $\frac{L}{d} \times R$

(b) The scientist connected the photocell to an ammeter and battery, as shown.

Photoelectrons are attracted to the electrode, causing a current in the circuit.

The scientist directed different frequencies and intensities of light onto the photocell.

She made the following observations:

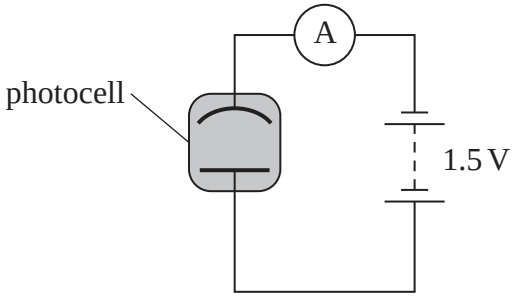

- white light with a low intensity caused no current
- white light with a high intensity caused no current
- ultraviolet light with a low intensity caused a current.

Explain what these observations show about the nature of light.

(5)
