STEMUP

These questions belong to Pearson Edexcel, not to us.

The examination questions, mark schemes and examiner comments in this pack were written and published by Pearson Edexcel. They are past assessment materials, reproduced here so that students can revise from them.

What we do not own

STEMUP is not affiliated with Pearson Edexcel and does not own, and makes no claim to own, any of the question, mark scheme or examiner report material in this pack. Pearson Edexcel has not endorsed, approved or been involved in the production of it. Pearson Edexcel and the qualification titles used here belong to their respective owners and appear for identification only.

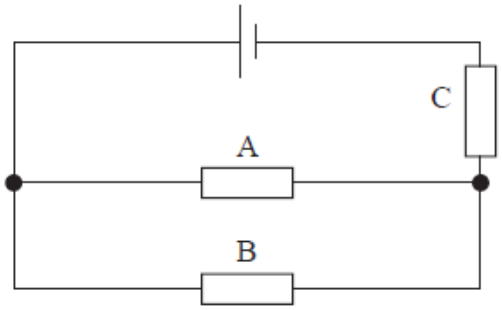

Where to find the originals

Pearson Edexcel publishes its past papers, mark schemes and examiner reports free of charge. Always check the current specification at qualifications.pearson.com before you revise, because content and wording can change between series.

If you hold the rights to any material in this pack and would like it amended or removed, contact admin@stemup.co.uk and we will act on it.

Q1.

The diagram shows a circuit containing three identical resistors, A, B and C. The cell has negligible internal resistance.

*(a) Explain how measurements of current and potential difference could be used to demonstrate that charge and energy are both conserved in this circuit. Your answer should refer to resistors A, B and C.

(6)

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(b) (i) Calculate the total resistance of the circuit.

resistance of each resistor = 12.5 Ω

(3)

.....

.....

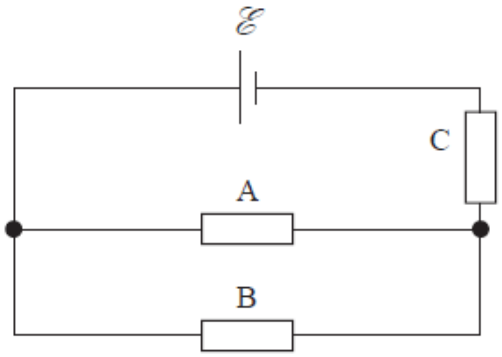

.....

.....

.....

Total resistance = ...

(ii) The resistors are connected to a different cell, with e.m.f. $\mathscr{E}$, as shown. The cell has an internal resistance.

Describe how a single ammeter reading can be used to determine the internal resistance of the cell. You should add to the diagram to show the position of this ammeter.

(3)

.....

.....

.....

.....

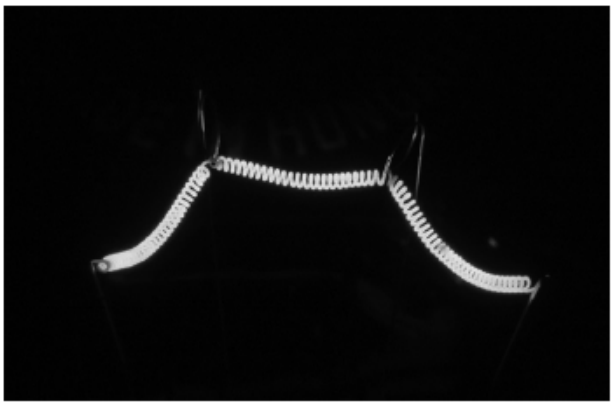

.....

.....

(Total for question = 12 marks)

Q2.

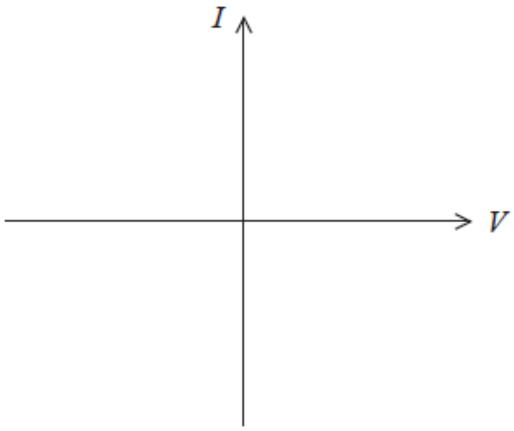

The photograph shows a thin, coiled, tungsten wire used in a filament light bulb.

(Source: © goran cakmazovic/Shutterstock)

(a) Complete the sketch graph to show how current varies with potential difference for a filament bulb.

(2)

(b) The tungsten wire has a diameter of 0.046 mm and a length of 580 mm. When emitting light, there is a current of 0.44 A in the filament and a potential difference of 140 V across the filament.

(i) Calculate the drift velocity v of the electrons in the tungsten wire.

number of charge carriers per m^3 in tungsten = 1.26×10^{29}

(3)

.....

.....

.....

.....

v = ...

(ii) When the potential difference across the tungsten filament is 140 V the current in the filament is 0.44 A.

The table shows typical resistivity values for tungsten at different temperatures.

Temperature / °C	20	700	1700	2700	3200
Resistivity / Ωm	0.55×10^{-7}	2.43×10^{-7}	5.57×10^{-7}	9.04×10^{-7}	10.85×10^{-7}

Deduce the temperature of the filament.

(3)

.....

.....

.....

.....

.....

(Total for question = 8 marks)

Q3.

Astronomers often use the unit megaparsec (Mpc) for astronomical distances. In a textbook a value for the Hubble constant is given as 72 km s^{-1} Mpc^{-1}.

(a)(i) Show that 72 km s^{-1} Mpc^{-1} is equivalent to a Hubble constant of about 2.3×10^{-18} s^{-1}.

1 Mpc = 3.09×10^{22} m

(2)

.....

.....

.....

.....

(ii) Determine a value for the age of the universe in years.

1 year = 3.16×10^{7} s

(2)

.....

.....

.....

.....

Age of universe = ... years

(b) In the 1950s, astronomers realised that they had made an error in their determination of distances to galaxies. Galaxies are twice as far away as astronomers had previously thought.

Explain how this changed the age of the universe as calculated by astronomers.

(2)

.....

.....

.....

.....

(Total for question = 6 marks)

Q4.

In the 17th century, Kepler proposed his 'law of harmonies' for planetary motion. This law suggested that the ratio of the square of the orbital period T to the cube of the mean radius R has the same value for all the planets that orbit the Sun.

Mathematically his 'law of harmonies' can be written

$$T^2 = KR^3$$

where K is a constant.

(a) The table shows data for Earth and Mars.

Planet	T/s	R/m
Earth	3.16×10^7	1.50×10^{11}
Mars	5.93×10^7	2.28×10^{11}

Show that, for Earth and for Mars, K has a value of about $3.0 \times\times 10^{-19}$ s^2 m^{-3}.

(3)

.....

.....

.....

.....

.....

.....

(b) Kepler's law of harmonies was derived later by Newton. Newton applied his law of gravitation to a planet moving in an approximately circular orbit around the Sun.

Determine a value for K by applying Newton's law of gravitation to a planet of mass m moving in a circular orbit about the Sun.

mass of Sun = 1.99×10^{30} kg

(3)

.....

.....

.....

.....

.....

.....

K = ... $s^2\ m^{-3}$

(c) Jupiter is the most massive planet in the solar system and has many moons. Kepler's law of harmonies applies to the orbiting moons. However, the value of K for the moons is not the same as the value that applies to planets orbiting the Sun.

Ganymede is Jupiter's largest moon. Ganymede has an orbital radius of 1.07×10^9 m and an orbital period of 172 hours.

Another moon, Io, has an orbital radius of 4.22×10^8 m.

Calculate the orbital period T_I of Io about Jupiter.

(2)

.....

.....

.....

.....

.....

.....

T_l = ...

(Total for question = 8 marks)

Q5.

The astronomer Hertzsprung used parallax to determine the distances to some of the variable stars known as Cepheids.

(a) Using parallax measurements, astronomers can determine distances to all stars with a parallax angle
larger than 2.4×10^{-7} rad.

The variable star Alpha Cephei is 4.6×10^{17} m from the Earth.

Deduce whether the distance to Alpha Cephei could be determined from parallax measurements.

distance from Earth to Sun = 1.5×10^{11} m

(3)

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(b) Cepheids are a type of standard candle.

Describe how standard candles can be used to determine distances to stars.

(3)

.....

.....

.....

.....

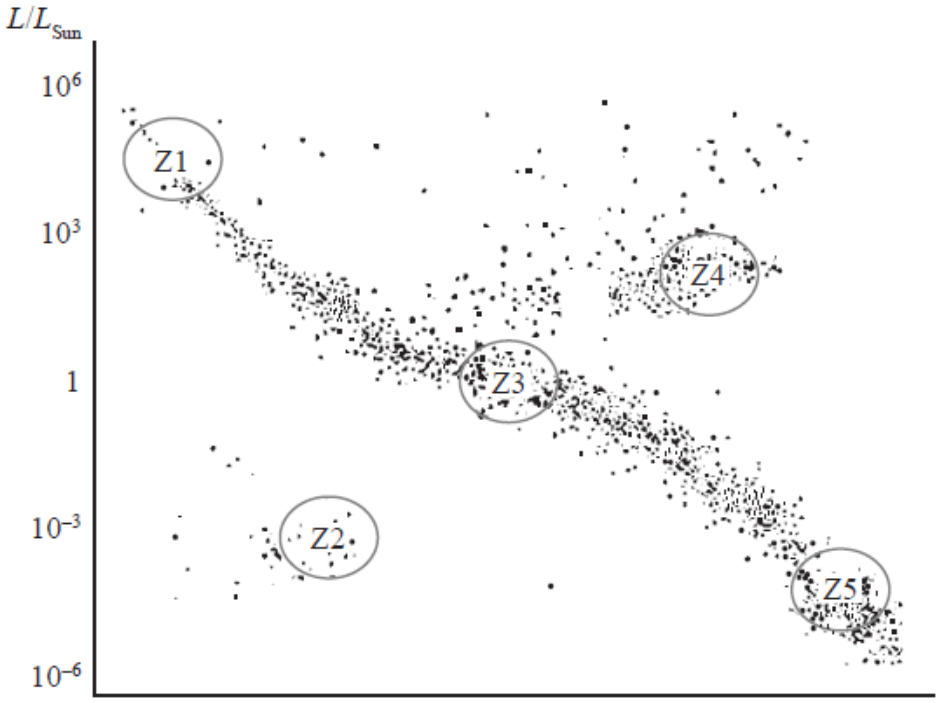

.....

.....

.....

(c) The Sun is a yellow star with a surface temperature of about 6000 K. In the 20th century, astronomers discovered a large variety of stars in our galaxy. Hertzsprung and Russell developed the Hertzsprung-Russell (HR) diagram as a way of classifying stars.

An HR diagram is shown below.

(i) Label the x-axis of the HR diagram. You should include approximate values.

(3)

(ii) There are five zones, Z1, Z2, Z3, Z4 and Z5, identified on the HR diagram.

Complete the following table. You should match one zone with each description.

(3)

Description	Zone
High mass hot stars	
Low mass cool stars	
Low mass hot stars	

*(iii) The position of a star on the HR diagram changes as the star evolves.

Explain how a star like the Sun evolves as it progresses from zone Z3 to its final position on the HR diagram.

(Total for question = 18 marks)

Q6.

The spectrum of light emitted by the star Chi Lupi provides evidence of mercury atoms in the outer layers of the star. The light emitted from the star is compared with light emitted from a mercury lamp on Earth.

(a) The lamp contains 1.65×10^{19} mercury atoms in a volume of 1.50×10^{-5} m^3. The pressure of the mercury vapour is 4.25×10^4 Pa.

Calculate the mean kinetic energy of the mercury atoms.

(3)

.....

.....

.....

.....

.....

.....

Mean kinetic energy of mercury atoms = ...

(b) One line in the spectrum of light from Chi Lupi has a wavelength of 576.933 nm.

The equivalent line in a mercury spectrum produced on Earth is 576.959 nm.

A student concluded from this data that Chi Lupi is moving towards the Earth, and that the relative velocity of Chi Lupi is about 1400 m s^{-1}.

Deduce whether the student's conclusions are correct.

(4)

.....

.....

.....

.....

.....

.....

.....

.....

(c) The surface temperature of Chi Lupi is twice the surface temperature of the Sun.

The radius of Chi Lupi is three times the radius of the Sun.

State where Chi Lupi would be located on the Hertzsprung-Russell diagram.

(1)

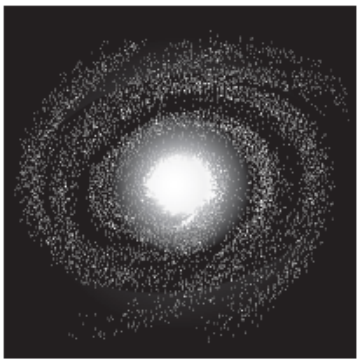

.....

.....

(Total for question = 8 marks)

Q7.

The image shown is a representation of our galaxy, the Milky Way.

(Source: © daulon/Shutterstock)

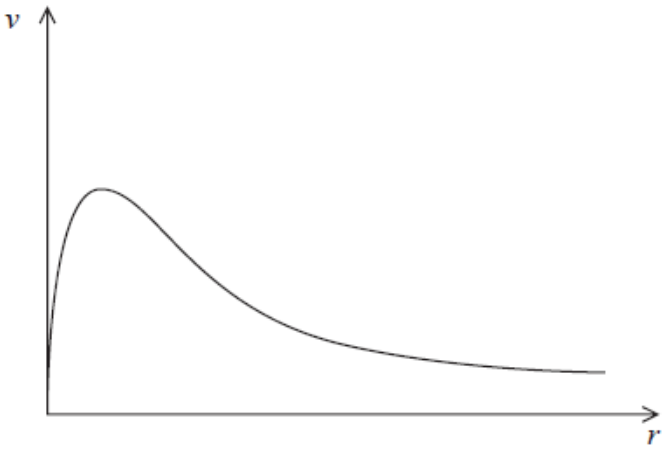

(a) Astronomers think that there is a very large concentration of stars in the central region of the galaxy. Outside this central region the concentration of stars is very much less. All stars in the galaxy are rotating about its centre.

It can be shown that the velocity v of a star a distance r from the centre of the galaxy is given by the expression

$$v = \sqrt{\frac{GM}{r}}$$

where M is the mass of the galaxy contained in a sphere of radius r.

(i) The graph shows how astronomers expect v to vary with r.

Explain how the expression gives the variation of v with r shown in the graph.

(3)

.....

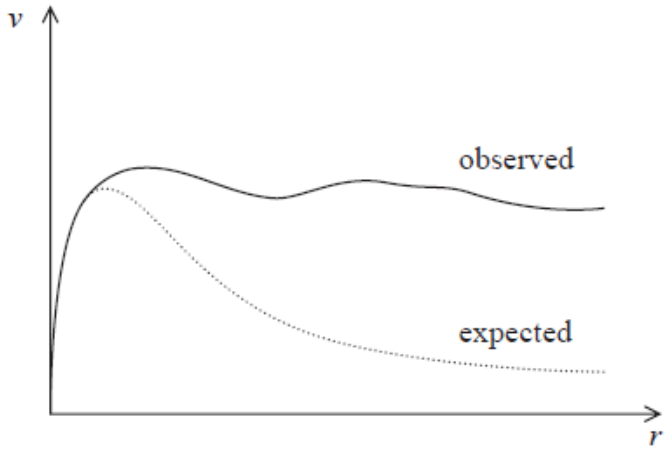

.....

.....

.....

.....

(ii) The observed variation of v with r has been added to produce the graph below.

Suggest why the 'observed' velocity varies as shown.

(2)

.....

.....

.....

.....

(b) The ultimate fate of the universe may be a closed universe, but astronomers cannot be sure what their current models predict.

Explain why astronomers cannot be sure that the universe is closed.

(2)

.....

.....

.....

.....

.....

(Total for question = 7 marks)

Q8.

The planets orbit the Sun in approximately circular orbits. The orbital time T of a planet is related to the average distance r of the planet from the Sun.

(a)(i) Show that T is related to r by the expression:

$$T^2 \propto r^3$$

(3)

.....

.....

.....

.....

.....

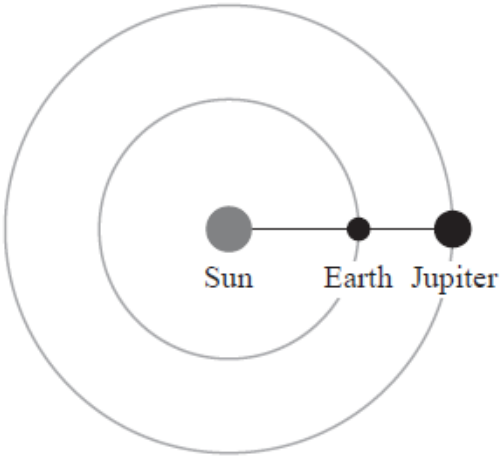

.....

.....

.....

(ii) When planets align as they orbit the Sun they are said to be 'in opposition'.

The diagram shows the Earth and Jupiter in opposition.

NOT TO SCALE

A website states that the Earth and Jupiter are in opposition every 13 months.

Deduce whether this statement is correct.

mean distance from Earth to Sun = 1.5×10^{11} m
mean distance from Jupiter to Sun = 7.8×10^{11} m
T_{Earth} = 12 months

(5)

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(b) The distance of Jupiter from the Sun varies from 7.4×10^{11} m to 8.2×10^{11} m.

Calculate the change in gravitational potential energy of Jupiter as it moves from its closest distance to its furthest distance from the Sun.

mass of Sun = 2.0×10^{30} kg
mass of Jupiter = 1.9×10^{27} kg

(3)

.....

.....

.....

.....

.....

.....

.....

Change in gravitational potential energy = ...

(Total for question = 11 marks)

Q9.

Wolf 359 is a red dwarf star. The distance of the star from Earth was first determined from parallax measurements made by the astronomer Max Wolf.

(a)(i) The parallax angle was 2.01×10^{-6} rad.

Calculate the distance, in metres, of Wolf 359 from Earth.

mean distance from Earth to Sun = 1.50×10^{11} m

(2)

.....

.....

.....

.....

.....

.....

Distance of Wolf 359 from Earth = ... m

(ii) Explain why parallax measurements can only be used to determine the distances to a relatively small number of stars.

(2)

.....

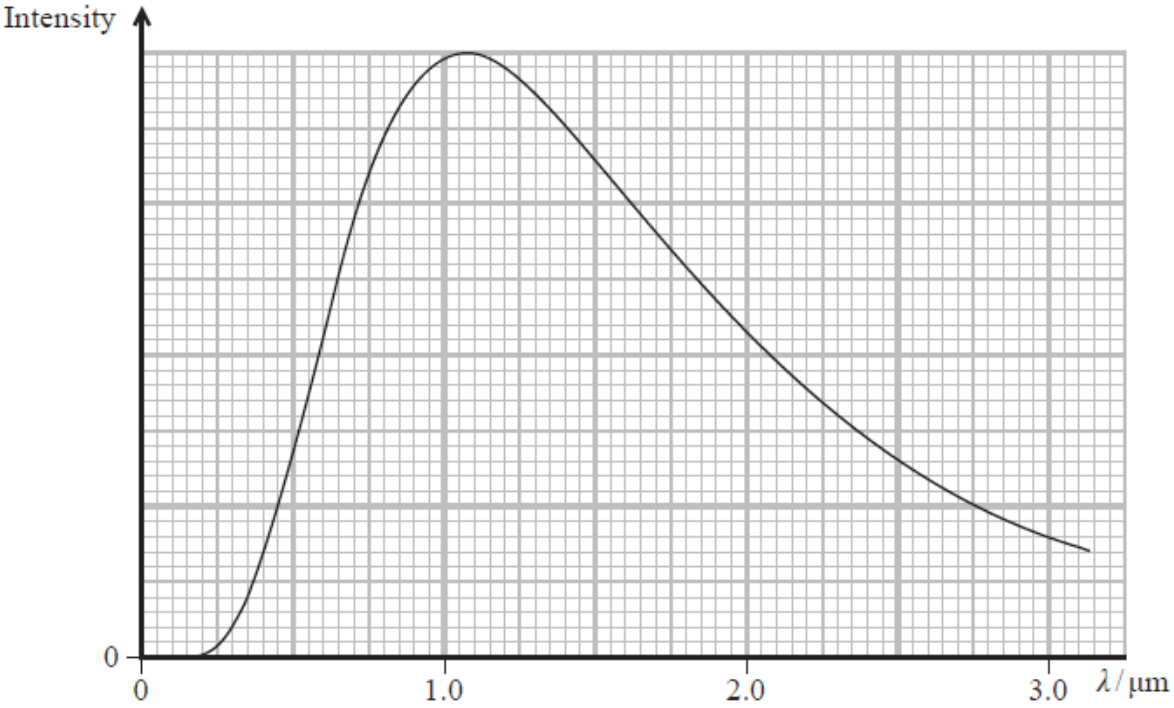

.....

.....

.....

.....

(b) The graph shows how the intensity of radiation from the star Wolf 359 varies with wavelength.

(i) Show that the surface temperature of Wolf 359 is about 2700 K.

(3)

.....

.....

.....

.....

(ii) The radius of the Sun is R_{Sun}. The radius of Wolf 359 is 0.16 R_{Sun}.

It is claimed that the luminosity of Wolf 359 is less than 0.1% of the luminosity of the Sun, L_{Sun}.

Deduce whether this claim is correct.

$R_{Sun} = 6.96 \times 10^8$ m
$L_{Sun} = 3.83 \times 10^{26}$ W
$T = 2700$ K

(3)

(Total for question = 5 marks)

Q11.

A nichrome wire of length 0.45 m has a cross-sectional area of 2.5×10^{-7} m^2.
The resistance of the wire is 2.0 Ω.

(a) Calculate the resistivity of nichrome.

(2)

.....

.....

.....

Resistivity = ...

(b) A potential difference of 3.0 V is applied across the nichrome wire.

Calculate the drift velocity of the conduction electrons in the nichrome wire.

number of conduction electrons per m^3 = 9.0×10^{28} m^{-3}

(3)

.....

.....

.....

.....

.....

Drift velocity = ...

(c) A student suggests that the drift velocity will double if the length of wire used in the circuit is halved.

Comment on this suggestion.

(3)

.....

.....

.....

.....

(Total for question = 8 marks)

Q12.

A standard candle in the galaxy M81 has a luminosity 14 800 times the luminosity of the Sun. The intensity of radiation received from the standard candle, measured at the top of the Earth's atmosphere, is 3.64×10^{-17} W m^{-2}.

$L_{Sun} = 3.83 \times 10^{26}$W

.....

.....

.....

.....

.....

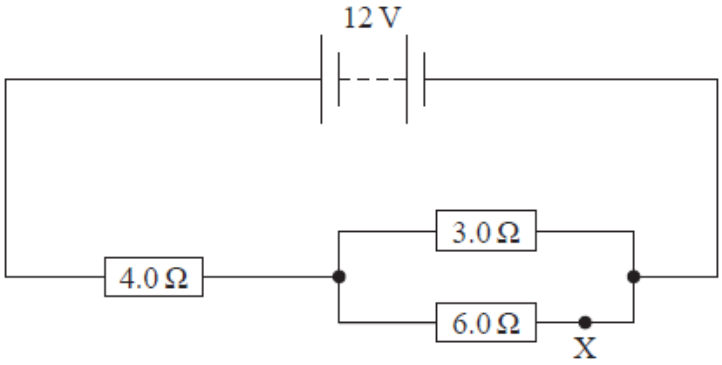

.....

Distance of M81 from Earth = ...

(Total for question = 3 marks)

Q13.

A student set up the circuit shown.

(a) Calculate the number of electrons passing point X each second.

(6)

.....

.....

.....

.....

.....

.....

.....

.....

.....

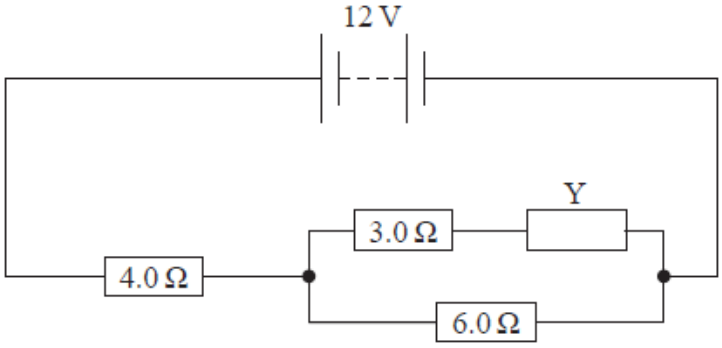

.....

.....

.....

Number of electrons in one second = ...

(b) Another resistor, Y, is added to the circuit as shown.

The student wrote the following statement.

> *When resistor Y is added, the resistance of the parallel section increases, the resistance of the whole circuit increases, and so, by $P = I^2R$, the power dissipated by the whole circuit also increases.*

Evaluate the student's statement.

(4)

.....

.....

.....

.....

.....

(Total for question = 10 marks)

Q14.

A student set up the circuit shown. The battery had a negligible internal resistance.

The resistance of the thermistor varies with temperature, as shown by the graph.

(a) Determine the milliammeter reading when the temperature of the thermistor is 54 °C.

(4)

.....

.....

.....

.....

.....

.....

.....

.....

Milliammeter reading = ...mA

(b) (i) Explain how decreasing the temperature of the thermistor affects the voltmeter reading. Do not include calculations in your answer.

(2)

.....

.....

.....

.....

(ii) Explain how decreasing the temperature of the thermistor affects the power dissipated by the 2.0 kΩ resistor. Do not include calculations in your answer.

(Total for question = 8 marks)

Q15.

Answer the question with a cross in the box you think is correct (☒). If you change your mind, put a line through the box (☒) and then mark your new answer with a cross (☒).

The number of conduction electrons in a light dependent resistor changes as light intensity increases.

Which of the following best explains how the number of conduction electrons changes?

☒ **A** It decreases because the lattice ions vibrate with a larger amplitude.

☒ **B** It increases because the lattice ions vibrate with a larger amplitude.

☒ **C** It increases because the electrons gain energy from the photons of light.

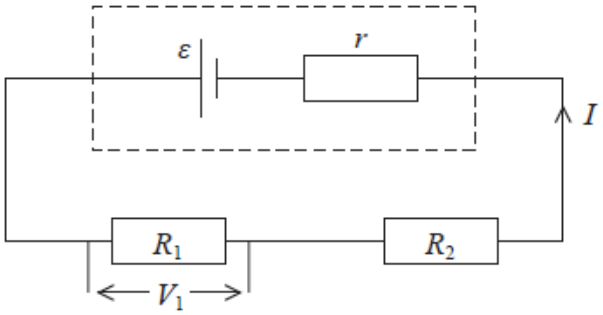

☒ **D** It decreases because electrons are released due to the photoelectric effect.

(Total for question = 1 mark)

Q16.

Select one answer from A to D and put a cross in the box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

The diagram shows a cell of e.m.f. ε and internal resistance r. The cell is connected in series with two resistors of resistance R_1 and R_2. The potential difference across R_1 is V_1. The current in the circuit is I.

Which of the following expressions is correct?

☒ **A** $\varepsilon = V_1 + Ir$

☒ **B** $\varepsilon = IR_1 + Ir$

☒ **C** $\varepsilon = IR_2 + Ir$

☒ **D** $\varepsilon = V_1 + IR_2 + Ir$

(Total for question = 1 mark)

Q17.

Answer the question with a cross in the box you think is correct ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

The gravitational field strength at the surface of the Earth is g.

Another planet has the same density as the Earth, but twice the radius of the Earth.

What is the gravitational field strength at the surface of this planet?

☒ **A** $4g$

☒ **B** $2g$

☒ **C** $\frac{g}{2}$

☒ **D** $\frac{g}{4}$

(Total for question = 1 mark)

Q18.

Answer the question with a cross in the box you think is correct ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

A communications satellite has a mass of 935 kg. The satellite has an orbital radius four times the radius of the Earth.

☒ **A** 0 N

☒ **B** 570 N

☒ **C** 2300 N

☒ **D** 9200 N

(Total for question = 1 mark)

Q19.

Answer the question with a cross in the box you think is correct ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

Which of the following does **not** have the base unit s^{-1}?

☒ **A** angular velocity

☒ **B** frequency

☒ **C** redshift

☒ **D** rate of decay

(Total for question = 1 mark)

Q20.

Answer the question with a cross in the box you think is correct (☒). If you change your mind, put a line through the box (☒) and then mark your new answer with a cross (☒).

At a point in a circuit there is a current of 3.0 A.

Which of the following gives the total charge passing this point in 2.0 minutes?

☒ **A** 0.025 C

☒ **B** 1.5 C

☒ **C** 6.0 C

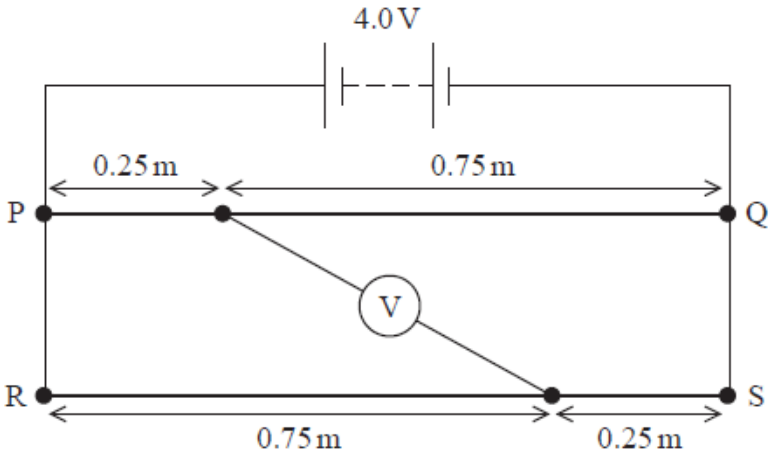

☒ **D** 360 C

(Total for question = 1 mark)

Q21.

Answer the question with a cross in the box you think is correct (☒). If you change your mind, put a line through the box (☒) and then mark your new answer with a cross (☒).

A battery is connected to identical, uniform, nichrome wires, PQ and RS. A voltmeter is connected to the wires as shown. The battery has negligible internal resistance.

Which of the following is the reading on the voltmeter?

☒ **A** 1.0 V

☒ **B** 2.0 V

☒ **C** 3.0 V

☒ **D** 4.0 V

(Total for question = 1 mark)

Q22.

Select one answer from A to D and put a cross in the box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

As temperature increases, the resistance of a negative temperature coefficient thermistor changes.

Which of the following describes the reason for this change?

☒ **A** Collisions between electrons and ions occur less frequently.

☒ **B** More conduction electrons are released.

☒ **C** The ions in the thermistor vibrate less.

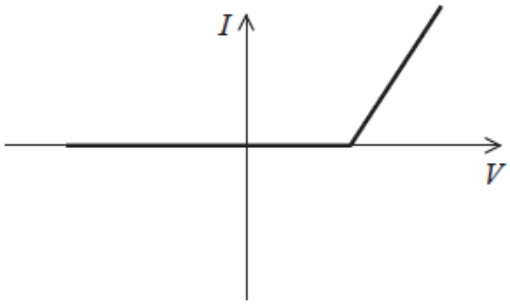

☒ **D** The ions in the thermistor vibrate more.

(Total for question = 1 mark)

Q23.

Select one answer from A to D and put a cross in the box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

The graph shows how current *I* varies with potential difference *V* for an electrical component.

Which component is represented by this graph?

☒ **A** Diode

☒ **B** Filament lamp

☒ **C** Ohmic conductor

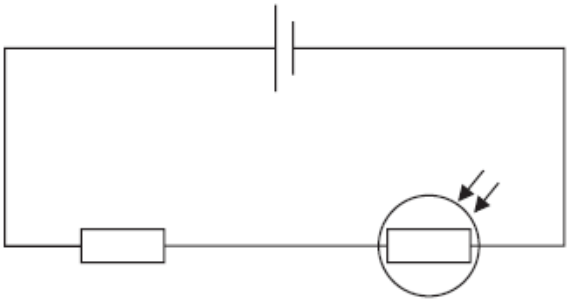

☒ **D** Thermistor

(Total for question = 1 mark)

Q24.

Select one answer from A to D and put a cross in the box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

A light dependent resistor (LDR) and a fixed resistor are connected in a circuit, as shown.

The intensity of the light incident on the LDR is increased.

Which of the following does **not** take place as the light intensity is increased?

☒ **A** The current in the circuit increases.

☒ **B** The potential difference across the fixed resistor increases.

☒ **C** The total power dissipated in the circuit decreases.

☒ **D** The resistance of the LDR decreases.

(Total for question = 1 mark)

Q25.

Select one answer from A to D and put a cross in the box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

The spectrum of electromagnetic radiation from a galaxy is observed to have a redshift.

Which of the following is a correct statement about lines in this spectrum?

☒ **A** All the lines are in the red part of the spectrum.

☒ **B** All the lines are observed to have longer wavelengths than expected.

☒ **C** Lines with wavelengths at the red end of the spectrum are the most intense.

☒ **D** Light for all the lines was emitted with longer wavelengths than expected.

(Total for question = 1 mark)

Q26.

Select one answer from A to D and put a cross in the box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

Sirius and α-Centauri are two of our closest stars. Sirius has a luminosity about 16 times greater than the luminosity of α-Centauri. Sirius is twice as far away from the Earth as α-Centauri.

The intensity of light from Sirius is I_s and the intensity of light from α-Centauri is I_α.

Which of the following is the value of $\frac{I_s}{I_\alpha}$?

☒ **A** $\frac{1}{4}$

☒ **B** 4

☒ **C** 8

☒ **D** 16

(Total for question = 1 mark)

Q27.

Select one answer from A to D and put a cross in the box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

Current theory suggests that the universe is expanding.

Which of the following is evidence to support this theory?

☒ **A** All galaxies appear to be rotating in space.

☒ **B** Dark matter has been detected in the universe.

☒ **C** All distant stars are observed to be increasing in size.

☒ **D** The further a galaxy is from the Earth, the faster it recedes.

(Total for question = 1 mark)

Q28.

Answer the question with a cross in the box you think is correct ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

Which of the following units is equivalent to the volt?

☒ **A** $J\ s^{-1}$

☒ **B** $W\ s^{-1}$

☒ **C** $J\ C^{-1}$

☒ **D** $W\ C^{-1}$

(Total for question = 1 mark)

Q29.

Answer the question with a cross in the box you think is correct ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

The luminosity axis of a Hertzsprung-Russell diagram has a logarithmic scale.

Which of the following is the reason for this?

☒ **A** Stars all have very large luminosities.

☒ **B** The range of luminosities of stars is very large.

☒ **C** The range of distances to stars is very large.

☒ **D** The temperature axis has a logarithmic scale.

(Total for question = 1 mark)

Mark Scheme

<tr><th></th><th>Number of marks awarded for structure of answer and sustained line of reasoning</th></tr>
<tr><td>Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout</td><td>2</td></tr>
<tr><td>Answer is partially structured with some linkages and lines of reasoning</td><td>1</td></tr>
<tr><td>Answer has no linkages between points and is unstructured</td><td>0</td></tr>
</table>
Indicative content

Current is the rate of flow of charge
Current is the same at all points in a series circuit
Or current in C = current in cell.
total current going into a junction = total current out of junction
Or current in C/cell = current in A + current in B
Or current splits (equally) between A and B
p.d. is energy transferred per unit charge
p.d is shared between components in series
Or p.d. across C + p.d. across A = e.m.f. of cell
Or p.d. across C + p.d. across B = e.m.f. of cell
Or p.d. across C + p.d. across A/B combination = e.m.f. of cell
p.d. is the same across components in parallel
Or p.d. across A is the same as that across B

</td><td>6</td></tr>

Question Number	Answer		Mark
a	Correct shape of graph for positive quadrant Correct symmetry in negative quadrant  	(1) (1)	**2**
13bi	Use of $A = \pi r^2$ Use of $I = nqvA$ $v = 1.3 \times 10^{-2}\ \text{m s}^{-1}$ Example of calculation $A = \pi r^2 = \pi \times (0.023 \times 10^{-3}\ \text{m})^2 = 1.66 \times 10^{-9}\ \text{m}^2$ $v = \frac{I}{nAq} = \frac{0.44\ \text{A}}{(1.26 \times 10^{29}\text{m}^{-3})\,(1.66 \times 10^{-9}\ \text{m}^2)(1.60 \times 10^{-19}\text{C})} = 0.0131\ \text{m s}^{-1}$	(1) (1) (1)	**3**
bii	Use of $R = V/I$ Use of $R = \rho l/A$ $\rho = 9.1 \times 10^{-7}\ (\Omega\text{m})$, so approximately 2700°C (MP2 e.c.f. for A value from part b(i)) Example of calculation $R = \frac{140\ \text{V}}{0.44\ \text{A}} = 318\ \Omega$ $\rho = \frac{RA}{l} = \frac{(318\ \Omega)(1.66 \times 10^{-9}\text{m}^2)}{0.580\ \text{m}} = 9.1 \times 10^{-7}\ \Omega\text{m}$, so this most closely matches the resistivity value at 2700°C.	(1) (1) (1)	**3**
	Total for question		**8**

Q3.

STEMUP.CO.UK

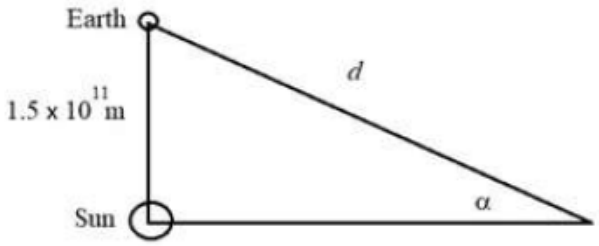

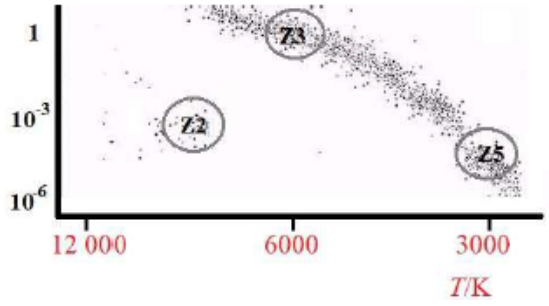

Question Number	Answer		Mark
(a)(i)	Use of $v = H_0 d$	(1)	
	$H_0 = 2.33 \times 10^{-1}$ (s^{-1})	(1)	2
	Example of calculation $H_0 = \frac{72 \times 10^3 \text{ m s}^{-1}}{3.09 \times 10^{22} \text{ m}} = 2.33 \times 10^{-18} \text{ s}^{-1}$		
(a)(ii)	Use of $t = \frac{1}{H_0}$	(1)	
	$t = 1.36 \times 10^{10}$ (years) ecf from (i)	(1)	2
	Example of calculation $t = \frac{1}{2.33 \times 10^{-1} \text{ s}^{-1}} = 4.29 \times 10^{17} \text{ s}$ $t = \frac{4.29 \times 10^{17} \text{ s}}{3.16 \times 10^7 \text{ s year}^{-1}} = 1.36 \times 10^{10} \text{ years}$		
(b)	H_0 is halved (for the same recessional velocity)	(1)	
	So the (calculated) age of the universe doubles (dependent upon MP1)	(1)	
	OR		
	The universe would have taken twice as long to expand to its current size (assuming it expanded at the same rate)	(1)	
	So the age of the universe is double what was previously thought (dependent upon MP1)	(1)	2
	Allow 1 mark max for H_0 is lower so universe is older than previously thought **Or** universe would have taken longer to expand to current size so it is older than previously thought.		
	Total for question		6

Q4.

Question Number	Answer		Mark
(a)	Use of $T^2 = KR^3$	(1)	
	K for Earth = 2.96×10^{-19} ($s^2\ m^{-3}$)	(1)	
	K for Mars = 2.97×10^{-1} ($s^2\ m^{-3}$)	(1)	**3**
	Example of calculation		
	$K = \frac{T^2}{R^3} = \frac{(3.16 \times 10^7 s)^2}{(1.50 \times 10^{11} m)^3} = 2.959 \times 10^{-19}\ s^2\ m^{-3}$		
	$K = \frac{T^2}{R^3} = \frac{(5.93 \times 10^7 s)^2}{(2.28 \times 10^{11} m)^3} = 2.967 \times 10^{-19}\ s^2\ m^{-3}$		
(b)	**Either**		
	Use of $F = \frac{GMm}{r^2}$ with $F = \frac{mv^2}{r}$	(1)	
	Re-arrangement with $v = \frac{2\pi r}{T}$ to identify K as $\frac{(2\pi)^2}{GM}$	(1)	
	$K = 2.97 \times 10^{-19}$ ($s^2\ m^{-3}$)	(1)	
	Or		
	Use of $F = \frac{GMm}{r^2}$ with $F = m\omega^2 r$	(1)	
	Re-arrangement with $\omega = \frac{2\pi}{T}$ to identify K as $\frac{(2\pi)^2}{GM}$	(1)	
	$K = 2.97 \times 10^{-19}$ ($s^2\ m^{-3}$)	(1)	**3**
	Example of calculation		
	$\frac{GMm}{r^2} = m\omega^2 r$		
	$\frac{GM}{r^2} = \left(\frac{2\pi}{T}\right)^2 r$		
	$T^2 = \frac{(2\pi)^2}{GM} r^3$		
	$K = \left(\frac{4\pi^2}{6.67 \times 10^{-11}\ N\ m^2\ kg^{-2} \times 1.99 \times 10^{30}\ kg}\right) = 2.97 \times 10^{-1}\ s^2 m^{-3}$		

(c)	Use of $T^2 = KR^3$	(1)	
	T = 43 hours	(1)	**2**
	Example of calculation		
	$\left(\frac{T_I}{T_G}\right)^2 = \left(\frac{R_I}{R_G}\right)^3$		
	$T = \sqrt{\left(\frac{4.22 \times 10^8\ m}{1.07 \times 10^9\ m}\right)^3 \times (172\ hour)^2} = 42.6$ hours		
	Total for question		**8**

Q5.

Question Number	Answer		Mark
(a)	Use of trigonometry to calculate the parallax angle **Or** Use of trigonometry to calculate distance	(1)	
	(Smallest) parallax angle = 3.3×10^{-7} (rad) **Or** max distance = 6.25×10^{17} (m)	(1)	
	Comparison of calculated value with corresponding value in question with valid conclusion	(1)	3
	Example of calculation $\sin \alpha = \frac{1.5 \times 10^{11}\ \text{m}}{d}$ $\alpha = \sin^{-1}\left(\frac{1.5 \times 10^{11}\ \text{m}}{4.6 \times 10^{17}\ \text{m}}\right) = 3.26 \times 10^{-7}$ rad **Or** $\alpha = \left(\frac{1.5 \times 10^{11}\ \text{m}}{4.6 \times 10^{17}\ \text{m}}\right) = 3.26 \times 10^{-7}$ rad (small angle approximation)		
			
(b)	The intensity (of radiation from the candle) is measured	(1)	
	The luminosity of the standard candle is known	(1)	
	The inverse square law is used to determine the distance [Accept reference to $I=L/4\pi d^2$ with symbols defined]	(1)	3
(c)(i)	Axis labelled with T / K	(1)	
	Reverse logarithmic scale	(1)	
	6000 K in correct position on scale	(1)	3
	Example of graph labelling 		
(c)(ii)			

Description	Zone		
High mass hot stars	Z1	(1)	
Low mass cool stars	Z5	(1)	
Low mass hot stars	Z2	(1)	3

(c)(iii)

This question assesses a student's ability to show a coherent and logically structured answer with linkages and fully-sustained reasoning.

Marks are awarded for indicative content and for how the answer is structured and shows lines of reasoning.

The following table shows how the marks should be awarded for structure and lines of reasoning.

	Number of marks awarded for structure of answer and sustained line of reasoning
Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout	2
Answer is partially structured with some linkages and lines of reasoning	1
Answer has no linkages between points and is unstructured	0

Total marks awarded is the sum of marks for indicative content and the marks for structure and lines of reasoning

IC points	IC mark	Max linkage mark	Max final mark
6	4	2	6
5	3	2	5
4	3	1	4
3	2	1	3
2	2	0	2
1	1	0	1
0	0	0	0

Indicative content

IC1 The star is fusing hydrogen in its core

IC2 When fusion ceases (the core of the star cools and) the core collapses/contracts (under gravitational forces)

IC3 The star (moves to Z4 as it expands and) becomes a red giant star

IC4 Temperature (in the core) is high enough for helium fusion to begin

IC5 Helium begins to run out and then fusion ceases

IC6 The star becomes a white dwarf (in Z2)

Q6.

Question Number	Answer		Mark
(a)	Use of $pV = NkT$	(1)	3
	Use of $\frac{1}{2}m\langle c^2\rangle = \frac{3}{2}kT$	(1)	
	$\frac{1}{2}m\langle c^2\rangle = 5.8 \times 10^{-20}$ J	(1)	
	Example of calculation		
	$T = \frac{pV}{Nk} = \frac{4.25\times10^{4}\text{ Pa}\times1.50\times10^{-5}\text{ m}^3}{1.65\times10^{19}\times1.38\times10^{-23}\text{ J K}^{-1}} = 2800$ K		
	$\frac{1}{2}m\langle c^2\rangle = \frac{3}{2}\times 1.38\times10^{-23}\text{ J K}^{-1}\times 2800\text{ K} = 5.80\times10^{-20}$ J		
(b)	Use of $\frac{v}{c} = \frac{\Delta\lambda}{\lambda}$ with wavelength measured on Earth in denominator	(1)	4
	v = 13500 m s^{-1}	(1)	
	The student is correct to say that the star is moving towards the Earth, as the measured wavelength is less than that from the lamp spectrum.	(1)	
	Comparison of calculated velocity with 1400 m s^{-1} and appropriate conclusion.	(1)	
	Example of calculation		
	$v = \frac{\Delta\lambda}{\lambda}c = \frac{(576.933\text{-}576.959)\times10^{-9}\text{m}}{576.959\times10^{-9}\text{ m}}\times3.00\times10^{8}\text{ m s}^{-1} = (-)1.35\times10^{4}\text{ m s}^{-1}$		
	So the star's velocity is much larger than 1400 m s^{-1}		
(c)	On the main sequence, above the position of the Sun **Or** above and to the left of the position of the Sun	(1)	1
	Total for question		8

Q7.

Question Number	Answer		Mark
(a)(i)	$v \propto \sqrt{\frac{M}{r}}$	(1)	
	Within the central region M changes a lot (so v increases) **Or** Outside the central region M is approximately constant (so v decreases)		
	As r increases v reaches a peak value as shown on the graph	(1)	
	[A bald description of the graph having a peak value can score MP3]	(1)	**3**
(a)(ii)	There must be more mass (than we can observe)	(1)	
	[Accept statement that there must be a greater gravitational force]		
	There is dark matter present (in the galaxy)	(1)	**2**
(b)	(For a closed universe) the density of the universe must be greater than the critical density	(1)	
	And the (average) density of the universe is uncertain **Or** the amount of dark matter is uncertain	(1)	**2**
	Total for question		7

Q8.

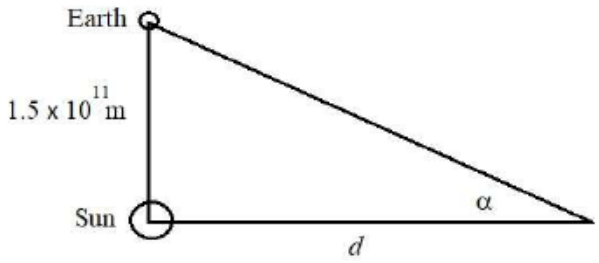

Question Number	Answer		Mark
(a)(i)	Use of $F = \frac{GMm}{r^2}$ with $F = m\omega^2 r$	(1)	
	Re-arrangement with $\omega = \frac{2\pi}{T}$ to obtain $T^2 = \frac{(2\pi)^2}{GM} r^3$	(1)	
	Statement that G, M (and π) are constants, so $T^2 \propto r^3$ (dependent upon MP2)	(1)	
	OR		
	Use of $F = \frac{GMm}{r^2}$ with $F = \frac{mv^2}{r}$	(1)	
	Re-arrangement with $v = \frac{2\pi r}{T}$ to obtain $T^2 = \frac{(2\pi)^2}{GM} r^3$	(1)	
	Statement that G, M (and π) are constants, so $T^2 \propto r^3$ (dependent upon MP2)	(1)	3
	Example of calculation		
	$\frac{GMm}{r^2} = m\omega^2 r$		
	$\frac{GM}{r^2} = \left(\frac{2\pi}{T}\right)^2 r$		
	$T^2 = \frac{(2\pi)^2}{GM} r^3$		
	$\therefore T^2 \propto r^3$		

(a)(ii)	Use of $T^2 \propto r^3$	(1)	
	T_J = 142 months (11.9 years)	(1)	
	Use of $\omega = \frac{\theta}{t}$ and $\omega = \frac{2\pi}{T}$	(1)	
	Calculation of time elapsed for planets to be in opposition	(1)	
	Time between opposition is 13.1 months, with an appropriate conclusion (dependent upon MP4)	(1)	5
	Example of calculation		
	$\left(\frac{T_J}{T_E}\right)^2 = \left(\frac{r_J}{r_E}\right)^3$		
	$\left(\frac{T_J}{1\text{ year}}\right)^2 = \left(\frac{7.8 \times 10^{11}\text{ m}}{1.5 \times 10^{11}\text{ m}}\right)^3$		
	$T_J = 12\text{ months} \times \sqrt{\left(\frac{7.8 \times 10^{11}\text{ m}}{1.5 \times 10^{11}\text{ m}}\right)^3} = 142\text{ months}$		
	At the next opposition Earth will have done one more orbit than Jupiter plus whatever fraction of an orbit Jupiter has completed.		
	If t is the time to next opposition, both planets will have the same angular displacement, so equating $\theta = 2\pi\, t/T$ for both planets where for Earth the time is $(t - 12)$.		
	$\frac{2\pi\text{ rad }(t-12)\text{ month}}{12\text{ month}} = \frac{2\pi\text{ rad }t}{142\text{ month}} \therefore t = 13.1\text{ month}$		

STEMUP.CO.UK

(b)	Use of $V = (-)\frac{GM}{r}$	(1)	
	Use of $\Delta V \times m$	(1)	
	$\Delta E_{grav} = 3.3 \times 10^{34}$ J	(1)	**3**
	<u>Example of calculation</u> $\Delta V = -GM\left(\frac{1}{r_2} - \frac{1}{r_1}\right)$ $\Delta V = -6.67 \times 10^{-11}\ \text{N m}^2\ \text{kg}^{-2} \times 2.0 \times 10^{30}\text{kg} \times \left(\frac{1}{8.2 \times 10^{11}\ \text{m}} - \frac{1}{7.4 \times 10^{11}\ \text{m}}\right)$ $\Delta V = 1.76 \times 10^{7}\ \text{J kg}^{-1}$ $\therefore \Delta E_{grav} = 1.76 \times 10^{7}\ \text{J kg}^{-1} \times 1.9 \times 10^{27}\ \text{kg} = 3.34 \times 10^{34}\ \text{J}$		
	Total for question		**11**

Q9.

Question Number	Answer		Mark
(a)(i)	Use of trigonometry to calculate distance **Or** use of small angle approximation to calculate distance	(1)	
	Distance to Wolf 359 = 7.5×10^{16} (m)	(1)	**2**
	<u>Example of calculation</u>  $\tan(2.01 \times 10^{-6}) = \frac{1.50 \times 10^{11}\ \text{m}}{d}$ $\therefore d = \frac{1.50 \times 10^{11}\ \text{m}}{2.01 \times 10^{-6}} = 7.46 \times 10^{16}\ \text{m}$		
(a)(ii)	Parallax angle decreases as distance from the Earth increases **Or** parallax is only suitable for (relatively) close stars	(1)	
	As parallax angle is too small to measure for distant stars	(1)	**2**

STEMUP.CO.UK

(b)(i)	λ_{max} read from graph	(1)	
	Use of $\lambda_{max}T = 2.898 \times 10^{-3}$ m K	(1)	
	$T = 2680$ (K) [accept 2635 K → 2760 K]	(1)	**3**
	Example of calculation $T = \frac{2.898 \times 10^{-3}\ \text{m K}}{1.08 \times 10^{-6}\ \text{m}} = 2683\ \text{K}$		
(b)(ii)	Use of $L = \sigma A T^4$	(1)	
	$L = 4.70 \times 10^{23}$ W (allow ecf from (b)(i))	(1)	
	Comparison of calculated value of L with L_{Sun} and appropriate conclusion **Or** comparison of calculated L/L_{Sun} percentage with 0.1% and appropriate conclusion	(1)	**3**
	Example of calculation $L = 4\pi\,(0.16 \times 6.96 \times 10^8\ \text{m})^2 \times 5.67 \times 10^{-8}\ \text{W m}^{-2}\ \text{K}^{-4}\ (2700\ \text{K})^4$ $L = 4.70 \times 10^{23}\ W$ $\frac{L}{L_{Sun}} \times 100\% = \frac{4.70 \times 10^{23}\ W}{3.83 \times 10^{26}\ W} \times 100\% = 0.12\%$		
	Total for question		**10**

Q10.

Question Number	Answer		Mark
	λ_{max} read from graph [450 nm → 500 nm]	(1)	
	Use of $\lambda_{max}T = 2.898 \times 10^{-3}$ m K	(1)	
	Use of $L = \sigma AT^4$	(1)	
	Use of $A = 4\pi r^2$	(1)	
	$D_P = 4.6 \times D_{Sun}$ so statement is incorrect Or $D_P = 3.2 \times 10^9$ m, which is more than twice Sun's diameter, so statement is incorrect	(1)	5
	Example of calculation $T = \frac{2.898 \times 10^{-3}\ \text{m K}}{470 \times 10^{-9}\ \text{nm}} = 6170\ \text{K}$ $A = \frac{2.65 \times 10^{27}\ \text{W}}{5.67 \times 10^{-8}\ \text{W m}^{-2}\ \text{K}^4 \times (6170\ \text{K})^4} = 3.22 \times 10^{19}\ \text{m}^2$ $r = \sqrt{\frac{3.22 \times 10^{19}\ \text{m}^2}{4\pi}} = 1.60 \times 10^9\ \text{m}$ $\frac{D_P}{D_{Sun}} = \frac{2 \times 1.60 \times 10^9\ \text{m}}{6.96 \times 10^8\ \text{m}} = 4.6$

Q11.

Question Number	Answer		Mark
a	Use of $R = \rho l/A$ $\rho = 1.1 \times 10^{-6}\ \Omega\,\text{m}$ Example of calculation $\rho = \frac{RA}{l} = \frac{(2.0\ \Omega)\ (2.5 \times 10^{-7}\,\text{m}^2)}{0.45\ \text{m}} = 1.11 \times 10^{-6}\ \Omega\,\text{m}$	(1) (1)	2
b	Use of $R = V/I$ Use of $I = nqvA$ $v = 4.2 \times 10^{-4}\ \text{m s}^{-1}$ Example of calculation $I = V/R = (3.0\ \text{V}) / 2.0\ \Omega) = 1.5\text{A}$ $v = \frac{I}{nqA} = \frac{1.5\ \text{A}}{(9.0 \times 10^{28}\ \text{m}^{-3})(1.60 \times 10^{-19}\ \text{C})\ (2.5 \times 10^{-7}\text{m}^2)}$ $= 4.17 \times 10^{-4}\ \text{m s}^{-1}$	(1) (1) (1)	3
c	Halving length halves resistance Which doubles the current I = nqvA related to drift velocity doubling (so suggestion is correct)	(1) (1) (1)	3
	Total for question		8

Q12.

Question Number	Answer		Mark
	Use of $L = 14800\ L_{\text{Sun}}$ Use of $I = \frac{L}{4\pi d^2}$ $d = 1.1 \times 10^{23}\ \text{m}$ Example of calculation $L_{\text{candle}} = 14\,800 \times 3.83 \times 10^{26}\ \text{W} = 5.67 \times 10^{30}\ \text{W}$ $d = \sqrt{\frac{L}{4\pi I}} = \sqrt{\frac{5.67 \times 10^{30}\text{W}}{4\pi \times 3.64 \times 10^{-17}\text{W m}^{-2}}} = 1.11 \times 10^{23}\ \text{m}$	(1) (1) (1)	3
	Total for question		3

Q13.

Question Number	Answer		Mark
a	**Either**		
	Uses resistors in parallel formula correctly	(1)	
	Adds series resistance	(1)	
	Use of $V = IR$ to find whole circuit current	(1)	
	Current in the 6.0 Ω resistor = 0.67(A)	(1)	
	Use of $Q = It$	(1)	
	4.2×10^{18} (electrons)	(1)	
	Or		
	Uses resistors in parallel formula correctly	(1)	
	Uses potential divider to calculate V across parallel section	(1)	
	Use of $V = IR$ to find current in 6.0 Ω resistor	(1)	
	Current in the 6.0 Ω resistor = 0.67(A)	(1)	
	Use of $Q = It$	(1)	
	4.2×10^{18} (electrons)	(1)	**6**
	Example of calculation $\frac{1}{Rp} = \frac{1}{3.0\Omega} + \frac{1}{6.0\Omega}$, so $R_{parallel} = 2.0\ \Omega$ Total circuit resistance = 4.0 Ω + 2.0 Ω = 6.0 Ω $I = V / R$ = 12 V / 6.0 Ω = 2.0 A Current in 6.0 Ω resistor is 1/3 of 2.0A = 0.67 A No. of electrons per second = $\frac{\text{current}}{\text{charge per electron}} = \frac{0.67\ \text{A}}{1.60 \times 10^{-19}\text{C}}$ = 4.2×10^{18} electrons per second		
b	(Student is correct that) resistance in circuit/parallel is greater	(1)	
	V is the same	(1)	
	So if student uses $P = V^2/R$	(1)	
	Power in whole circuit would be less, so student incorrect	(1)	
	Or		
	(Student is correct that) resistance in circuit/parallel is greater	(1)	
	This leads to current being lower	(1)	
	So if student used $P = VI$ with same V	(1)	
	Power in whole circuit would be less, so student incorrect	(1)	
	Or		
	(Student is correct that) resistance in circuit/parallel is greater	(1)	
	This leads to current being lower	(1)	
	Effect of decreasing current > the effect of increasing resistance	(1)	
	Power in whole circuit would be less, so student incorrect	(1)	**4**
	(MP4 via any method is dependent on awarding MP2 & MP3)		
	Total for question		**10**

Q14.

STEMUP.CO.UK

Question Number	Answer		Mark
(a)	**Either**		
	Resistance at 54°C = 0.95 - 1.0 (kΩ)	(1)	
	Use of resistors in parallel formula	(1)	
	Use of $V = IR$	(1)	
	Milliammeter reading = 9.0 (mA)	(1)	
	(MP2 can only be awarded if the thermistor resistance is added to 3.0 kΩ prior to using the formula).		
	Or		
	Resistance at 54°C = 0.95 - 1.0 (kΩ)	(1)	
	Use of $V = IR$ to calculate current in 2.0 kΩ resistor	(1)	
	Use of resistors in series formula and $V = IR$	(1)	
	Milliammeter reading = 9.0 (mA)	(1)	**4**
	Example of calculation At 54°C, resistance of thermistor (read from graph) = 1.0 kΩ. $\frac{1}{R_T} = \frac{1}{2000\ \Omega} + \frac{1}{(3000+1000)\Omega}$, so $R_T = 1333\ \Omega$ $I = \frac{V}{R} = \frac{12\ \text{V}}{1333\ \Omega} = 9.0\ \text{mA}$		
(b(i)	Resistance (of thermistor) increases	(1)	
	(Thermistor takes a larger share of the pd) so voltmeter reading increases	(1)	**2**
	(MP2 dependent on MP1 being awarded)		
(b)(ii)	**Either**		
	Potential difference (across 2.0 kΩ resistor) is constant	(1)	
	Power dissipated (by 2.0 kΩ resistor) remains the same because $P = V^2/R$	(1)	
	Or		
	Current (in 2.0 kΩ resistor) is constant	(1)	
	Power dissipated (by 2.0 kΩ resistor) remains the same because $P = I^2R$	(1)	
	Or		
	Potential difference and current (for 2.0 kΩ resistor) are both constant	(1)	
	Power dissipated (by 2.0 kΩ resistor) remains the same because $P = VI$	(1)	**2**
	Total for question		**8**

Q15.

Question Number	Answer	Mark
	C is the correct answer as semiconductors such as LDRs release more electrons when energy is absorbed. A is not the correct answer as the number of conduction electrons increases. B is not the correct answer as the increase in lattice vibrations is not related to the reason why more conduction electrons are released. D is not the correct answer as the number of conduction electrons increases.	**(1)**

STEMUP.CO.UK

Q16.

Question Number	Answer	Mark
	D is the correct answer as the sum of e.m.f. = the sum of p.d. A is not the correct answer as this does not include the p.d. across R_2 B is not the correct answer as this does not include the p.d..across R_2 C is not the correct answer as this does not include the p.d. across R_1	**(1)**

Q17.

Question Number	Answer	Mark
	B is the correct answer, as $g = \frac{GM}{r^2}$ and $M = \frac{4}{3}\pi\rho r^3$	**(1)**

Q18.

Question Number	Answer	Mark
	B is the correct answer, as $F = \frac{GMm}{r^2}$	**(1)**

Q19.

Question Number	Answer	Mark
	C is the correct answer A is not the correct answer, as angular velocity has units (rad) s^{-1} B is not the correct answer, as frequency has units Hz = s^{-1} D is not the correct answer, as rate of decay has units Bq = s^{-1}	**(1)**

Q20.

Question Number	Answer	Mark
	D is the correct answer as $Q = It$ where t is time in seconds. A is not the correct answer as $Q = It$ where t is time in seconds. B is not the correct answer as $Q = It$ where t is time in seconds. C is not the correct answer as $Q = It$ where t is time in seconds.	**(1)**

Q21.

Question Number	Answer	Mark
	B is the correct answer as the potential across the 0.25m section of PQ is 1.0V, and the potential across the 0.25m section of RS is also 1.0V, leaving 2.0V of p.d. to make the sum of the p.d.s equal to the sum of the e.m.f.s on that loop of the circuit passing through the voltmeter. A is not the correct answer as a p.d. of 1.0V would require an e.m.f. of 3.0V C is not the correct answer as a p.d. of 3.0V would require an e.m.f. of 5.0V D is not the correct answer as a p.d. of 4.0V would require an e.m.f. of 6.0V	**(1)**

Q22.

Question Number	Answer	Mark
	B is the correct answer as a thermistor is a semiconductor A is not the correct answer as this would occur when temperature decreases C is not the correct answer as this would occur when temperature decreases D is not the correct answer as this, although it does occur, has a lesser effect than the release of more conduction electrons	**(1)**

Q23.

Question Number	Answer	Mark
	A is the correct answer as the graph shown is a V-I graph for a diode B is not the correct answer as the graph is not that for a filament lamp C is not the correct answer as the graph is not that for an ohmic conductor D is not the correct answer as the graph is not that for a thermistor	**(1)**

Q24.

Question Number	Answer	Mark
	C is the correct answer as power for the whole circuit = $\varepsilon \times I$ and I increases whilst e.m.f. remains the same A is not the correct answer as increased intensity increases the number of conduction electrons released by the LDR B is not the correct answer as the potential difference across the LDR will decrease, causing the potential difference across the resistor to increase D is not the correct answer as the resistance of an LDR decreases as light intensity increases	**(1)**

Q25.

Question Number	Answer	Mark
	B is the correct answer A is incorrect, as the lines may be shifted into any region of the spectrum C is incorrect, as the intensity of the lines is not related to the redshift D is incorrect, as the wavelengths of the emitted lines is not affected	**(1)**

Q26.

Question Number	Answer	Mark
	B is the correct answer, as $I = \frac{L}{4\pi d^2}$	**(1)**

Q27.

Question Number	Answer	Mark
	D is the correct answer, as this is a statement of Hubble's law	**(1)**

Q28.

Question Number	Answer	Mark
	C is the correct answer as $V = W/Q$ A is not the correct answer as volts are not equivalent to energy/time B is not the correct answer as volts are not equivalent to power/time D is not the correct answer as volts are not equivalent to power/charge	**(1)**

Q29.

Question Number	Answer	Mark
	B is the correct answer A is not the correct answer, as large values could fit on a linear scale C is not the correct answer, as distance from the star only affects the intensity D is not the correct answer, as the temperature and luminosity scales are independent	**(1)**
