STEMUP

These questions belong to OCR, not to us.

The examination questions, mark schemes and examiner comments in this pack were written and published by OCR. They are past assessment materials, reproduced here so that students can revise from them.

What we do not own

STEMUP is not affiliated with OCR and does not own, and makes no claim to own, any of the question, mark scheme or examiner report material in this pack. OCR has not endorsed, approved or been involved in the production of it. OCR and the qualification titles used here belong to their respective owners and appear for identification only.

Where to find the originals

OCR publishes its past papers, mark schemes and examiner reports. Always check the current specification at ocr.org.uk before you revise, because content and wording can change between series.

If you hold the rights to any material in this pack and would like it amended or removed, contact admin@stemup.co.uk and we will act on it.

Gateway Biology A (9-1)

Ecosystems

Please note that you may see slight differences between this paper and the original.

Candidates answer on the Question paper.

OCR supplied materials:

Additional resources may be supplied with this paper.

Other materials required:

- Pencil
- Ruler (cm/mm)

Duration: Not set

Candidate
forename

Candidate
surname

Centre number

Candidate number

INSTRUCTIONS TO CANDIDATES

- Write your name, centre number and candidate number in the boxes above. Please write clearly and in capital letters.
- Use black ink. HB pencil may be used for graphs and diagrams only.
- Answer **all** the questions, unless your teacher tells you otherwise.
- Read each question carefully. Make sure you know what you have to do before starting your answer.
- Where space is provided below the question, please write your answer there.
- You may use additional paper, or a specific Answer sheet if one is provided, but you must clearly show your candidate number, centre number and question number(s).

INFORMATION FOR CANDIDATES

- The quality of written communication is assessed in questions marked with either a pencil or an asterisk. In History and Geography a *Quality of extended response* question is marked with an asterisk, while a pencil is used for questions in which *Spelling, punctuation and grammar and the use of specialist terminology* is assessed.
- The number of marks is given in brackets [] at the end of each question or part question.
- The total number of marks for this paper is **203**.
- The total number of marks may take into account some 'either/or' question choices.

- 1 Nitrogen is an important element found in living organisms.

Read this article about nitrogen and plants.

Nitrogen – the farmers' friend

Plants are surrounded by plenty of nitrogen gas in the air but cannot use it.

The main way they get nitrogen is from the soil. Plants need nitrogen for growth.

When farmers harvest their crops they dig the remains of the plant into the soil.

This will help their crops grow next year.

Explain what happens to the dead plants that are dug into the soil and why this helps new crops grow.

----- [3]

2 Snowshoe hares live in parts of Canada.

They are preyed on by animals called lynx.

snowshoe hare

lynx

Where the lynx and hares live there is snow on the ground for long periods of time.

Scientists think that increasing levels of carbon dioxide pollution may make the weather in Canada warmer.

Warmer weather might affect the survival of snowshoe hares.

In 2015 the scientists collected data about the survival of the hares.

They also predicted how the hares will survive in the future if the weather gets warmer.

Their results are shown in the table.

Year	2015	2050	2080
percentage chance of a hare surviving one year	9.3	8.2	7.0

Write about how an increase in carbon dioxide levels can make the weather warmer.

How can warmer weather explain the predictions about the survival of the hares?

The quality of written communication will be assessed in your answer to this question.

[6]

The diagram shows a garden food web.

- (i) What is the source of energy for this food web?

----- [1]

- (ii) The grasshopper is **both** a primary and a secondary consumer.

Explain why it is both.

----- [2]

- (iii) The people who own the garden buy a cat.

The cat spends a lot of time in the garden and frightens away birds.

Explain what might happen to the numbers of ladybirds in the garden.

----- [2]

4 Nitrogen is an element found in living organisms.

Read this article about nitrogen and plants.

Nitrogen – the farmers' friend

Plants are surrounded by plenty of nitrogen gas in the air but cannot use it.

The main way they get nitrogen is from the soil.

Plants need nitrogen for growth.

When farmers harvest their crops they often dig the remains of the plant into the soil.

The decomposition of the plant remains will provide nitrates for next year's crop.

Explain how the decomposition of dead plants in the soil provides nitrates for next year's crop.

----- [3]

6 The scientists are studying the **population** of newts in the pond.

The newts are also part of a **community** living in the pond.

Explain the difference between the terms population and community.

[1]

7 The diagram shows organisms in a soil food web.

Write about the different organisms in **this** food web.

Include ideas about

- which organisms are detritivores, carnivores or decomposers
- how **earthworms** help improve the structure and fertility of the soil.

The quality of written communication will be assessed in your answer to this question.

[6]

- Explain the difference between the terms population and community.

[1]

-

Most sewage outfalls are monitored for pollution by the environment agency.

In 1989 there were a number of outfalls not being monitored.

These outfalls were identified and named TDC outfalls.

Water companies have been told to reduce these TDC outfalls by allowing the environment agency to monitor them.

The table shows how the number of TDC outfalls has changed in some areas.

Water company progress in reducing TDCs		
	number of TDCs in 1989	number of TDCs in 2016
Anglian	328	328
Northumbrian	9	9
South West	62	46
Southern	29	29
Thames	1787	400
United Utilities	650	650
Wessex	152	84
Yorkshire	234	234

Which water company had made the **most** progress in reducing the number of TDCs?

-----[1]

(b) Why is it important to reduce the number of TDC outlets?

-----[2]

10 Which process in the carbon cycle **takes in** carbon dioxide from the air?

- A Combustion
- B Decomposition
- C Photosynthesis
- D Respiration

Your answer

[1]

11 The diagram shows a pyramid of biomass.

Which trophic level is X?

- A Primary consumers
- B Producers
- C Secondary consumers
- D Tertiary consumers

Your answer

[1]

12(a) A gardener buys a composter to decay plant material as quickly as possible.

The composter has three sections.

She designs an experiment to see if watering makes the plant material decay faster.

She waters:

- Section A once a week
- Section B once a month
- Section C is not watered.

The gardener wants valid results. Explain **one** factor that the gardener should keep constant.

----- [2]

(b) The gardener measures the temperature in each section for five months.

She knows that heat is given off when plant material decays.

The graph shows her results.

(i) Write down **two** differences between the change in temperature in Section A and the change in temperature in Section C.

1

2

[2]

(ii) The gardener decides that she should water all sections every week.

Explain why she decides this.

[1]

(c) Each section of the composter has holes in it to let oxygen in.

Explain why this helps the material to decay.

----- [2]

13 The diagram shows the flow of biomass through an agricultural food chain.

(i) Calculate how much biomass is lost between the plants and humans.

Answer = ----- kg [1]

(ii) One way biomass is lost from the food chain is by insects eating the leaves of plants.

Write down **one** other way that biomass is lost from the food chain.

----- [1]

14(a) The diagram shows part of a food web from a grassland.

How many secondary consumers are shown in this food web?

-----[1]

(b) A survey was set up to see if the number of badgers and hedgehogs has changed in the UK.

The number of badgers and hedgehogs were counted in different areas each year from 2003 to 2012.

The graph shows the results.

Use the food web to suggest an explanation for the change in the number of hedgehogs shown in the graph.

[2]

(c) Hedgehogs are covered in small spines.

When they are frightened they often roll up into a ball and keep still.

- (i) In country areas, where badgers live, this is an advantage to the hedgehogs.

In cities, where there are many roads, this is a disadvantage.

Explain these two conclusions.

----- [2]

- (ii) Scientists have noticed that a new type of hedgehog is increasing in numbers in cities.

These hedgehogs do not roll up. They run away when frightened. The scientists think that genes control this behaviour.

Explain how this type of hedgehog may become more common in cities.

Use ideas about natural selection.

----- [4]

- 15 A student investigates plants growing underneath a tree.

He lays out a tape measure on the ground, starting at the tree. He then places a quadrat on the ground.

He measures the percentage of the ground in the quadrat that is covered by plants. He repeats this every metre away from the tree.

The table shows his results.

Distance from the tree (m)	Percentage of ground covered by plants (%)
1	10
2	15
3	18
4	22
5	50
6	58
7	62
8	64

The student thinks that shade from the tree is affecting the plants.

Explain how the student's results show this.

[4]

16(a) The diagram shows part of a food web from a grassland.

How many secondary consumers are shown in this food web?

[1]

(b) A survey was set up to see if the number of badgers and hedgehogs has changed in the UK.

The number of badgers and hedgehogs were counted in different areas each year from 2003 to 2012.

The graph shows the results.

Use the food web to suggest an explanation for the change in the number of hedgehogs shown in the graph.

----- [2]

(c) Hedgehogs are covered in small spines.

When they are frightened they often roll up into a ball and keep still.

- (i) In country areas, where badgers live, this is an advantage to the hedgehogs.

In cities, where there are many roads, this is a disadvantage.

Explain these two conclusions.

[2]

- (ii) Scientists have noticed that a new type of hedgehog is increasing in numbers in cities.

These hedgehogs do not roll up. They run away when frightened. The scientists think that genes control this behaviour.

Explain how this type of hedgehog may become more common in cities.

Use ideas about natural selection.

[4]

He lays out a tape measure on the ground, starting at the tree. He then places a quadrat on the ground.

He measures the percentage of the ground in the quadrat that is covered by plants. He repeats this every metre away from the tree.

The table shows his results.

Distance from the tree (m)	Percentage of ground covered by plants (%)
1	10
2	15
3	18
4	22
5	50
6	58
7	62
8	64

Explain how the student's results show this.

[41]

This graph is in the instruction booklet for the machine.

Which size of plant pieces is best for making compost?

Explain your answer.

[3]

(b) The size of the plant pieces has an effect on the number of microorganisms in the compost.

Suggest why.

[2]

(c) The decomposition of dead plants and animals is an important process for ecosystems.

Explain why.

[3]

19(a) The diagram shows the flow of biomass through an agricultural food chain.

(i) Calculate the percentage efficiency of transfer of biomass between the cattle food crop and humans.

Answer = ... % [2]

(ii) Write down **two** ways that biomass is lost from the food chain.

1

2

[2]

- (b) High levels of light intensity can damage plants. To prevent damage, plants have a protection mechanism.

When light intensity levels get **too high**, the protection mechanism switches on. This stops the plant absorbing too much light.

When the light intensity drops to safe levels, the protection mechanism switches off **slowly**.

Explain why this mechanism would **reduce** the biomass available to humans.

[illegible]

- (c) Switching off the protection mechanism described in part (b) involves the plant making a **protein**.

Scientists have put extra copies of the gene for this protein into the plants. This makes the plant make more mRNA molecules.

- (i) Explain why making more mRNA will switch off the mechanism faster.

----- [2]

- (ii) Scientists have found that the genetically modified plants make 20% more biomass.

Use the agricultural food chain on page 21 to calculate the increase in biomass this would provide for humans.

Answer = -----kg [2]

- (iii) Inserting extra copies of a plant's gene into a plant is a type of genetic modification (GM).

Another example of GM involves inserting a bacterial gene into a plant which makes the plant produce an insecticide.

Suggest reasons why.

----- [2]

- 20 Which of these is an **abiotic** factor that can affect organisms?

- A Food availability
- B Light intensity
- C Pathogens
- D Predators

Your answer

☐

[1]

21 The diagram shows the water cycle.

Which label, A, B, C or D, represents evaporation?

Your answer

[1]

22 Which relationship describes an organism living on an animal and harming it?

- A Decomposition
- B Mutualism
- C Parasitism
- D Predation

Your answer

[1]

23 Most food chains only have a maximum of five trophic levels.

Explain why.

- A Organisms always get larger at higher trophic levels.
- B Energy is lost at each trophic level.
- C It is more energy efficient to eat meat than plant material.
- D The number of organisms feeding always increases at higher trophic levels.

Your answer

[1]

24(a) The diagram shows part of a food web from a woodland.

(i) Great tits are described as both primary consumers and secondary consumers.

Explain why.

-----[2]

(ii) Foxes are described as both predators and competitors of pine martens.

Explain why.

-----[2]

(iii) Which organism in the food web occupies the second trophic level?

-----[1]

(b) Great tits and flycatchers are both birds.

In a conservation project, scientists have built boxes for the birds to nest in. The scientists fixed the boxes on trees at different heights.

The table shows how many birds of each type used the boxes for nesting.

Height of bird box above the ground (m)	Number of bird boxes used	
	By great tits	By flycatchers
1	1	6
2	7	5
4	10	6

(i) Draw a **bar chart** on the graph paper to show the scientists' results.

The results for great tits and flycatchers should be on the same axis.

[4]

(ii) The food web shows:

- Weasels feed on great tits
- Pine martens feed on flycatchers.

Weasels live on the ground but pine martens live in trees.

How can this be used to explain the results of the scientists' investigation?

[3]

25(a) The diagram shows the carbon cycle.

Boxes 1-4 represent different processes in the carbon cycle.

Draw lines to link boxes 1-4 to the correct name for the process in the carbon cycle.

1	Combustion
2	Eating
3	Photosynthesis
4	Respiration

[2]

(b) The diagram shows the carbon cycle.

Scientists investigated if crops can be grown on the planet Mars.

They used a soil that was similar to the soil found on Mars. The soil contained some minerals but no living organisms.

- (i) The scientists managed to grow crops in the soil. However on Mars, the minerals in the soil would soon run out.

Explain why.

[2]

- (ii) Living organisms could be added to the soil but there is no air on Mars. The plants would need to be grown in an enclosed structure.

At first, air would need to be added, but after a while the organisms in the soil and the plants would supply each other with the gases they need.

Explain how this would happen.

[2]

26 A student estimates the number of snails in a pond.

Part of his method involves collecting snails and marking them.

What is the name of the method that he is using?

- A Aseptic technique
- B Capture-recapture
- C Percentage increase
- D Scaling-up

Your answer

[1]

27 In food chains, biomass is lost between different trophic levels.

One reason for this is the release of undigested food from the body.

Which term is used to describe this release?

- A Decomposition
- B Egestion
- C Excretion
- D Peristalsis

Your answer

[1]

28(a) The diagram shows part of a food web from a woodland.

(i) Great tits are described as both primary consumers and secondary consumers.

Explain why.

[2]

(ii) Foxes are described as both predators and competitors of pine martens.

Explain why.

[2]

(iii) Which organism in the food web occupies the second trophic level?

[1]

(b) Great tits and flycatchers are both birds.

In a conservation project, scientists have built boxes for the birds to nest in. The scientists fixed the boxes on trees at different heights.

The table shows how many birds of each type used the boxes for nesting.

Height of bird box above the ground (m)	Number of bird boxes used	
	By great tits	By flycatchers
1	1	6
2	7	5
4	10	6

(i) Draw a **bar chart** on the graph paper to show the scientists' results.

The results for great tits and flycatchers should be on the same axis.

[4]

(ii) The food web shows:

- Weasels feed on great tits
- Pine martens feed on flycatchers.

Weasels live on the ground but pine martens live in trees.

How can this be used to explain the results of the scientists' investigation?

[3]

29(a) The diagram shows the carbon cycle.

Boxes 1-4 represent different processes in the carbon cycle.

Draw lines to link boxes 1-4 to the correct name for the process in the carbon cycle.

1	Combustion
2	Eating
3	Photosynthesis
4	Respiration

[2]

(b) Scientists investigated if crops could be grown on the planet Mars.

They used a soil that was similar to the soil found on Mars. The soil contained some minerals but no living organisms.

(i) The scientists managed to grow crops in the soil. However on Mars, the minerals in the soil would soon run out.

Explain why.

----- [2]

(ii) Living organisms could be added to the soil but there is no air on Mars. The plants would need to be grown in an enclosed structure.

At first, air would need to be added, but after a while the organisms in the soil and the plants would supply each other with the gases they need.

Explain how this would happen.

----- [2]

30(a) A salt marsh is a large muddy area of land where a river joins the sea. This is a rare habitat and some plants grow on salt marshes but nowhere else.

When the tide comes in the salt marsh gets covered with seawater.

Explain the effects of salt water on plant cells.

[1]

(b) A student investigates the plants growing on a salt marsh. He uses a quadrat to sample the plants.

He puts down two long tape measures at right angles to each other across the salt marsh. He then picks numbers at random and uses them to decide where to place a quadrat.

The diagram shows the position of all his quadrats across the salt marsh.

(i) The salt marsh measured 50 m x 50 m.

Each quadrat measured 0.5 m x 0.5 m.

Calculate the percentage of the whole salt marsh that was sampled by the student.

Percentage = ... % [3]

(ii) A second student sampled by placing five quadrats close together in the centre of the salt marsh.

Evaluate the sampling method of the second student compared to the method of the first student.

----- [3]

(iii) Suggest **one** factor that the students should consider in a risk assessment for their experiment.

----- [1]

(c) In some salt marshes large sand banks have been built. This stops tides from entering the salt marsh.

The level of soil on the salt marsh builds up and the marsh turns into dry land.

This dry land shows a greater biodiversity of plants than a salt marsh.

Explain why some scientists want to limit the building of sand banks, even though they increase biodiversity.

[2]

31 The diagram shows part of a cycle in an ecosystem.

What is the name of the cycle shown in the diagram?

- A Carbon cycle
- B Hydrogen cycle
- C Nitrogen cycle
- D Sulfur cycle

Your answer

[1]

32 Goldfish are a species of fish.

What name is given to all the goldfish living in a pond?

- A A community
- B An ecosystem
- C A habitat
- D A population

Your answer

[1]

- 33 Gardeners use dead plant material to make compost. They add this compost to soil where they are growing plants.

What do plant roots get from compost in the soil?

Put a **ring** around the correct answer.

carbon dioxide

minerals

nitrogen gas

oxygen gas

[1]

- 34 This is a food chain for organisms in a forest.

Oak tree → Greenfly → Ladybird → Blackbird

Which is the correct shape for a pyramid of **biomass** for this food chain?

A

B

C

D

Your answer

[1]

35(a) Gardeners use dead plant material to make compost. They add this compost to soil where they are growing plants.

Compost can be made in a composting bin. In the bin **aerobic** bacteria turn dead plant material into compost.

The drawing shows a composting bin.

Explain why the composting bin needs holes in it.

[2]

- (b) A new way of making compost is called bokashi. In this process the compost is made **anaerobically** in a different type of composter.

Scientists compare the normal methods of making compost with bokashi.

This is their method:

- Take one large pile of dead plant material
- Divide the material into two samples of equal mass
- Place one sample into the normal composter and place one sample into the bokashi composter
- Measure the temperature in each composter every 10 days
- After 40 days, measure the mass of the compost.

Why did the scientists put the same mass of compost in each composter?

Tick (✓) **one** box.

To allow valid comparisons of the results.

☐

To decrease the temperature.

☐

To make the measurements more accurate.

☐

To make the results repeatable.

☐

[1]

- (c) **Table 20.1** shows the scientists' temperature measurements.

Time (days)	Temperature of the compost (°C)	
	Normal compost	Bokashi compost
0	26	26
10	70	27
20	53	29
30	42	31
40	28	28

Table 20.1

- (i) The scientists' results for the normal compost are plotted on the grid.

Complete the graph by plotting the results for the **bokashi** compost and draw a curve of best fit.

[3]

- (ii) Describe the change in the temperature of the **normal** compost during the investigation.

[2]

- (iii) Use data from **Table 20.1** to calculate the difference between the maximum temperature of the normal compost and the maximum temperature of the bokashi compost.

Difference = ... °C [2]

- (iv) Which **two** statements explain this difference in temperature between the two types of compost?

Tick (✓) **two** boxes.

Both types of compost are made by aerobic respiration.

☐

Normal compost is made by aerobic respiration.

☐

Normal compost is made by anaerobic respiration.

☐

Aerobic respiration and anaerobic respiration release the same amount of energy.

☐

Aerobic respiration releases more energy than anaerobic respiration.

☐

Aerobic respiration releases less energy than anaerobic respiration.

☐

[2]

(d) Table 20.2 shows the scientists' results for the mass of the compost.

	Normal compost	Bokashi compost
Mass at start (kg)	1500	1500
Mass after 40 days (kg)	760	1200

Table 20.2

(i) The mass of the normal compost has decreased by 19 kg per day.

Calculate the decrease in mass of the bokashi compost per day.

Give your answer to the nearest **whole** number.

Decrease = ...kg per day [3]

(ii) Carbon dioxide is given off in the making of the compost. This causes most of the decrease in mass.

Scientists think that the bokashi method of composting might be better for the environment.

Use your answer from part (i) to justify the scientists' conclusion.

-----[1]

36 Which is the correct definition of a parasite?

- A An organism that is always at the top of a food chain.
- B An organism that kills and eats another organism.
- C An organism that lives on another living organism so that they both benefit.
- D An organism that lives on or in another living organism causing it harm.

Your answer

[1]

Not to scale

The number of penguins decreased in the area. This caused an increase in seal numbers.

What is a possible reason for the increase in seal numbers?

- A Less seals were eaten.
- B The krill numbers dropped.
- C There were more plankton for the seals to eat.
- D The seals had less competition for squid.

Your answer

[1]

38 The diagram shows pyramids of biomass for two food webs, X and Y.

Which statement explains the difference between the two pyramids?

- A In food web X there is a greater efficiency of transfer between primary consumer and secondary consumer than in Y.
- B In food web X there is a greater efficiency of transfer between secondary consumer and tertiary consumer than in Y.
- C In food web X there is a lower efficiency of transfer between primary consumer and secondary consumer than in Y.
- D In food web X there is a lower efficiency of transfer between secondary consumer and tertiary consumer than in Y.

Your answer

[1]

39(a) Gardeners often turn dead plant material from their garden into compost. They then add this compost to the soil where they are growing plants.

Why do gardeners add compost to their soil?

Tick (✓) **one** box.

Bacteria in the compost kill disease causing fungi.

☐

The compost is sterile and so is aseptic.

☐

The compost provides carbon dioxide for photosynthesis.

☐

The compost provides minerals for the plants.

☐

[1]

(b) Compost can be made in a composting bin. In the bin **aerobic bacteria** turn dead plant material into compost.

Some people use a different way of making compost, called bokashi. In this process the compost is made **anaerobically**.

The drawings show a normal composting bin and a bokashi bin.

Explain the difference in the design of the two composting bins.

[2]

(c) Scientists investigate the two methods of making compost.

This is their method:

- Take one large pile of dead plant material
- Divide the material into two samples of equal mass
- Place one sample into the normal composter and place one sample into the bokashi composter
- Measure the temperature in each composter every 10 days
- After 40 days, measure the mass of the compost.

Write down **one** way that the scientists make sure that they can draw valid conclusions.

----- [1]

(d) Table 18.1 shows the scientists' temperature readings.

Time (days)	Temperature of the compost (°C)	
	normal compost	bokashi compost
0	26	26
10	70	27
20	53	29
30	42	31
40	28	28

Table 18.1

(i) Plot the scientists' results on the grid for normal and bokashi compost, and draw **two** curves of best fit.

[5]

(ii) Explain why the temperature of the compost in the **normal** bin changed as shown in the graph.

[2]

(iii) Explain the difference in the temperature changes between the aerobic normal compost and the anaerobic bokashi compost.

[2]

(e) **Table 18.2** shows the scientists' results for the mass of the compost.

	Normal compost	Bokashi compost
Mass at start (kg)	1500	1500
Mass after 40 days (kg)	750	1100

Table 18.2

A gas is given off in the formation of the compost. This causes most of the decrease in mass.

- (i) The percentage decrease in the mass of the normal compost is 50%.

Calculate the percentage decrease in the mass of the bokashi compost.

Give your answer to 2 significant figures.

Percentage decrease = ... % **[3]**

- (ii) The scientists concluded that the bokashi method of composting might be better for the environment.

Use your answer from part (i) to justify the scientists' conclusion.

[2]

40(a) Fig. 16.1 shows a plant that grows in South America called stevia.

Fig. 16.1

(i) Write down the number of trophic levels in this food web.

----- [1]

(ii) What is the source of energy for this food web?

----- [1]

(iii) Septoria fungus is a parasite of stevia.

Explain what is meant by the term **parasite**.

----- [2]

(b) Fig. 16.2 shows a food web containing stevia.

Fig. 16.2

The leaves of stevia taste very sweet. People are now trying to grow stevia as a crop.

Stevia farmers often add nematode worms to their fields.

Explain why farmers do this.

Use Fig. 16.2 in your answer.

[3]

41(a) Fig. 22.1 shows the water cycle occurring in a lake.

Fig. 22.1

Draw a line to the correct name for the three processes labelled A, B and C in Fig. 22.1.

A	Evaporation
B	Photosynthesis
C	Precipitation
	Respiration
	Translocation
	Transpiration

[3]

(b) Surface run-off water passes through soil and back into the lake.

Write down **one** reason why surface run-off water is important to organisms living in the lake.

----- [1]

42(a) Fig. 16.1 shows the water cycle occurring in a lake.

Fig. 16.1

Draw a line to the correct name for the three processes labelled A, B and C in Fig. 16.1.

A

Evaporation

Photosynthesis

B

Precipitation

Respiration

C

Translocation

Transpiration

[3]

(b) Surface run-off water passes through soil and back into the lake.

Write down one reason why surface run-off water is important to organisms living in the lake.

[1]

END OF QUESTION PAPER

Question			Answer/Indicative content	Marks	Guidance
2			[Level 3] Answer includes a correct description of the greenhouse effect and is able to link this to the decrease in population of hares. Quality of written communication does not impede communication of the science at this level. (5 – 6 marks) [Level 2] Answer includes a correct description of the greenhouse effect or explains why warmer weather results in less hares surviving. Quality of written communication partly impedes communication of the science at this level. (3 – 4 marks) [Level 1] Answer includes reference to the greenhouse effect or global warming or identifies that the predictions are for less hares to survive (1 – 2 marks) [Level 0] Insufficient or irrelevant science. Answer not worthy of credit. (0 marks)	6	This question is targeted up to grade C Indicative scientific points about the warmer weather may include: • The greenhouse effect • Carbon dioxide being a greenhouse gas • Trapping more heat in the Earth's atmosphere • Less radiated out to space Indicative scientific points about the prediction of the hares include: • Warmer weather means less snow • Hares will be less well camouflaged • More eaten by lynx • Increased risk of disease due to warmer conditions • Flooding of habitats due to sea level rising • Lack of food due to inability to grow in the new climate Use the L1, L2, L3 annotations in Scoris; do not use ticks.

Question			Answer/Indicative content	Marks	Guidance
12	a		type of plant material ✓ will affect the rate of microbes decomposing ✓ OR Size/SA of plant material ✓ will affect the rate of microbes decomposing ✓ OR mass of plant material ✓ will affect the rate of microbes decomposing ✓ OR oxygen ✓ will affect the (aerobic) respiration of microbes ✓	2 (AO 3.1a)	Second marking point is dependent on a correct factor being stated ALLOW decay/breakdown/rot throughout ALLOW decomposers/saprophytes/bacteria/fungi throughout ALLOW amount of plant material IGNORE amount of compost / composter size Examiner's Comments This question was challenging for the candidates. The majority couldn't identify a correct control variable and explain the effect on microbe action. The most common answer was to keep the water the same, which was the independent variable. Exemplar 5 demonstrates an answer which did not gain credit. Exemplar 5 <i>She should keep the water constant.</i>

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
	b	i	any two from: A reaches the highest temperature ✓ A has a higher temperature for longer/at the start ✓ temperature increases quicker in A ✓ temperature falls quicker in A ✓ towards the end the temperature in A is lower ✓	2 (AO 2 × 2.2)	ALLOW ORA IGNORE A has a higher temperature IGNORE references to decay IGNORE comparisons to section B <u>Examiner's Comments</u> In this question the most common correct scoring point was that A reaches the highest temperature and increases quicker. Some candidates didn't make it a comparative answer with C, so did not gain credit. A small number of candidates referred to rate of decay instead of temperature or compared section A with section B.
		ii	Decay/breakdown/decompose/rot is fastest (in A) ✓	1 (AO 3.2a)	<u>Examiner's Comments</u> The majority of lower ability candidates did not score this question and linked watering more often to faster decay. Answer included seeing the effects of water on growth, also references to increases temperature on the plant material.
	c		(oxygen) is needed for microbes (that cause decay) ✓ for (aerobic) respiration ✓	2 (AO 1.2)	AW decomposers/saprophytes/ bacteria/fungi IGNORE references to enzymes <u>Examiner's Comments</u> In this question candidates linked oxygen and decay correctly but did not gain credit as couldn't demonstrate their knowledge and understanding of microbes requiring oxygen for respiration.
			Total	7	

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
13		i	21800 (kg) ✓	1 (AO 2.2)	<u>Examiner's Comments</u> Over half of the candidates could correctly calculate the amount of biomass lost between plants and humans. The most common incorrect answer was 19800kg.
		ii	egestion/excretion/respiration ✓	1 (AO 1.1)	ALLOW named excretory product /faeces/urine/ uneaten parts/heat IGNORE movement/waste DO NOT ALLOW growth <u>Examiner's Comments</u> This again was a good differentiator, with most common credited answer being respiration. A lot of candidates referred incorrectly to the cattle eating them as a cause of biomass loss.
			Total	2	

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
14	a		four / 4 ✓	1 (AO 1.2)	<u>Examiner's Comments</u> Over half of candidates achieved this mark and correctly identified the number of secondary consumers.
	b		badger number have increased ✓ more competition for food / less slugs to eat ✓	2 (AO 3.1b) (AO 3.2b)	IGNORE reference to hedgehog numbers dropping ALLOW badgers eat more slugs so less for hedgehogs ALLOW less food to eat IGNORE badgers are predators of hedgehogs IGNORE they both eat slugs <u>Examiner's Comments</u> The majority of candidates could identify there was a lack of slugs to eat for the hedgehogs. The higher ability candidates could link the increase in numbers, as the reason for the lack of food. Candidates that didn't score here just stated that the hedgehogs decrease which wasn't credit worthy, as the question asked for an explanation.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
	c	i	in country/advantage/where badgers live, if it rolls up in a ball then will provide more protection / less attacks from badgers/predators ✓ in cities/disadvantage/many roads, it will be run over by cars ✓	2 (AO 2 × 2.1)	ALLOW in country/advantage/where badgers live hedgehogs have defence against predators/badgers ALLOW hedgehogs have a reduced risk of being eaten <u>Examiner's Comments</u> More than half of candidates achieved at least one mark here. This question differentiated well between all abilities. Those candidates that didn't score did not link the hedgehogs to each conclusion properly. E.g. advantage/in country/where badgers live to correct conclusion. Exemplar 9 was credited 1 mark for the advantage conclusion. Exemplar 9 In country areas, when badgers come to prey on hedgehogs, the hedgehogs have protection, as badgers are frightened. They never go to touch the hedgehogs. [2]

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
		ii	hedgehogs that run away are more likely to survive / less likely to get run over ✓ they will reproduce ✓ pass on the allele/gene for running away ✓ over time/many generations (running away will become more common) ✓	4 (AO 4 × 2.1)	ALLOW ORA for each marking point ALLOW reference to how change occurred e.g. mutation for running away ALLOW offspring produced / breed together ALLOW pass on advantageous gene IGNORE trait is pass on / genes are passed on Examiner's Comments A number of candidates achieved at least 1 mark, mainly that hedgehogs which run away are more likely to survive. A small number of candidates confused natural selection with genetic engineering. Exemplar 10 shows an answer credited 3 out of 4 marks. Exemplar 10 because these Hedgehogs don't stay still and run away they can't get ran over as easily and they don't get eaten by predators that can get through the spines. This could be natural selection as only Hedge hogs who have survived are able to pass on these genes to offspring. [4]

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
15			idea of less plants/percentage of plants/% cover in shade/closer to the tree ✓ less light (in shade/closer to the tree)✓ less photosynthesis (in shade/closer to the tree)✓ less food/raw materials produced for growth (in shade/closer to the tree)✓	4 (AO 1.2) (AO 2.1) (AO 3.1b) (AO 3.2b)	ORA for all marking points ALLOW shows negative correlation IGNORE less sun IGNORE in shade no photosynthesis / no light ALLOW less light for photosynthesis (closer to the tree) 2 marks ALLOW photosynthesis less effective (closer to the tree) <u>Examiner's Comments</u> A number of candidates achieved 1 mark on this question for the idea of less plants/% cover closer to the tree/shade or the reverse argument. Most candidates didn't link this to less light for photosynthesis. Less food for growth was the least credited marking point.
			Total	4	

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
16	a		four / 4 ✓	1 (AO1.2)	<u>Examiner's Comments</u> This AO1.2 question required knowledge of scientific enquiry and procedures linked to interactions of organisms in a food web. Many candidates successfully identified four as the correct number. Lower ability candidates opted for the animals feeding on grass, thinking these were secondary consumers and incorrectly gave three as a response.
	b		badger number have increased ✓ more competition for food / less slugs to eat ✓	2 (AO 3.1b) (AO 3.2b)	IGNORE reference to hedgehog numbers dropping ALLOW badgers eat more slugs so less for hedgehogs ALLOW less food to eat IGNORE badgers are predators of hedgehogs IGNORE they both eat slugs <u>Examiner's Comments</u> This question assessed the analysis of information and drawing conclusions in AO3. Most candidates achieved full marks. Where candidates did not get full marks, this was usually due to forgetting to identify the increase in badger population or stating categorically that there would be no food or no hedgehogs, which did not gain a mark. Candidates need to refer to graphs or tables when given this information, to avoid making this type of error.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
	c	i	in country/advantage/where badgers live, if it rolls up in a ball then will provide more protection / less attacks from badgers/predators ✓ in cities/disadvantage/many roads, it will be run over by cars ✓	2 (AO 2 × 2.1)	ALLOW in country/advantage/where badgers live hedgehogs have defence against predators/badgers ALLOW hedgehogs have a reduced risk of being eaten <u>Examiner's Comments</u> This AO2.1 question was answered well overall. Candidates did not gain marks if they didn't correctly link their responses specifically to country or city areas. Just referring to roads was insufficient, however, candidates referring to many roads gained a mark as this distinguished the difference between city and country areas. The terms rural and urban were acceptable alternatives to country and city, in candidates' explanations. A common error was to say the rolling up was camouflage without explaining the answer.
		ii	hedgehogs that run away are more likely to survive / less likely to get run over ✓ to they will reproduce ✓ pass on the allele/gene for running away ✓ over time/many generations (running away will become more common) ✓	4 (AO 4 × 2.1)	ALLOW ORA for each marking point ALLOW reference to how change occurred e.g. mutation for running away ALLOW offspring produced / breed together ALLOW pass on advantageous gene IGNORE trait is pass on / genes are passed on <u>Examiner's Comments</u> This application of knowledge of natural selection question usually resulted in candidates gaining at least two marks. This was usually for identifying that the hedgehogs that could run away had a higher survival rate and could go on to breed. Higher ability candidates were able to link this to the advantageous gene and some could refer to the process occurring over time. Fewer candidates scored the last two marking points because they referred not to the advantageous gene, but in general to genes, mutation (not mutated gene) or to the trait or characteristic or behaviour of running away, and, for the last

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
					point, stating that because run away hedgehogs survived to breed, their numbers exceeded the numbers of roll up ones, simply because the roll up ones died.  Examination technique needs candidates to focus on applying their knowledge to a new scenario, and to answer the question asked, not to talk in generic terms. Exemplar 1  This candidate has been credited 3 marks. A mark is gained for identifying that a mutation has occurred to produce the running away hedgehog. They have gained a second mark for recognising they survive to reproductive age. Many candidates just referred to breeding or producing offspring which were deemed acceptable responses for that particular marking point. Also a third mark was gained for 'pass on the allele' has been given as they clearly understand that it is referring to the advantage of running away/genetic mutation for the advantageous gene. The candidate has not gained a mark for the new generation of hedgehogs as this does not reference the idea of the process repeating over several generations/overtime.

Mark Scheme

Question	Answer/Indicative content	Marks	Guidance
17	idea of less plants/percentage of plants/% cover in shade/closer to the tree ✓ less light (in shade/closer to the tree) ✓ less photosynthesis (in shade/closer to the tree) ✓ less food/raw materials produced for growth (in shade/closer to the tree) ✓	4 (AO 1.2) (AO 2.1) (AO 3.1b) (AO 3.2b)	ORA for all marking points ALLOW shows negative correlation IGNORE less sun IGNORE in shade no photosynthesis / no light ALLOW less light for photosynthesis (closer to the tree) 2 marks ALLOW photosynthesis less effective (closer to the tree) <u>Examiner's Comments</u> This question assessed four different assessment objectives. Candidates had to identify the trend from the graph and apply their knowledge and understanding to give a reason for the trend. They also had to interpret reasons for the trend and draw conclusions about how the shade was affecting the plants. Most candidates identified the trend. Higher ability candidates linked this to less light closer to the tree so reduced rate of photosynthesis. However, only the highest ability candidates concluded that this would result in less glucose/food production. Most candidates just referred to reduced growth, which on its own did not score a mark. Exemplar 2 <i>The results show that the further away from the base of the tree (where the shade is strongest) more plants are growing. For example, 2m away only 10% of the ground is covered by plants whereas 8m away a greater percentage of 64% of ground is covered. This means that the higher the light intensity (away from shade), the higher rate of photosynthesis showing it is a limiting factor and helps more plants to grow. Whereas the shade limits the light intensity and limits growth.</i> This candidate has been credited with 3 marks. A mark is gained for identifying the trend as a reverse argument. They have gained a second mark for recognising that

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
					this is due to a higher light intensity further from the tree. A third mark was gained for linking the increase light intensity to an increased rate of photosynthesis. The candidate has not gained the final conclusion mark as they have only referenced the plant growth and not the food/raw materials produced to enable the growth to occur.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
18	a		< 3(mm) ✓ encourages more microbes from day 0 to 25 ✓ therefore, more rapid decay/decomposition ✓ OR 3 – 5(mm) ✓ encourages more microbes from day 26 to 50/overall ✓ therefore, more rapid decay/decomposition ✓	3 (AO 3.1a) (AO 3.2a) (AO 3.2b)	ALLOW > 5 given only 1 mark available for more rapid decay <u>Examiner's Comments</u> In this question assessing AO3, many candidates scored at least two marks. They had two opportunities from the data to gain the first marking point, but to gain the second marking point they needed to correctly match this to the day range, some did not do this. Far fewer candidates then went on to link this to the faster rate of decomposition.
	b		Any two from: (small pieces means) there will be a larger surface area of dead plants ✓ therefore, decomposers will be able to reproduce faster / feed faster ✓ therefore, decomposers will be able to respire faster ✓	2 (AO 2 × 2.2)	<u>Examiner's Comments</u> In this AO2 question, few candidates linked size to area and a number incorrectly thought large pieces had large surface area. Very few candidates were able to link the size to rates of respiration or reproduction.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
	c		idea of recycling in nature ✓ named example of a recycled substance e.g. carbon/nitrogen ✓ example of reason why the recycling is important e.g. for photosynthesis / production of proteins in plants ✓	3 (AO 3 × 1.1)	ALLOW mineral being returned to the soil / environment IGNORE nutrients/minerals IGNORE water ALLOW carbon dioxide/nitrates/nitrogen compounds recycled Examiner's Comments Most candidates understood the concept of recycling nutrients and often correctly named examples. Only a few understood the importance of this, beyond the idea that the nutrients are needed. Occasionally did they say specifically why. Exemplar 3 <i>It is an important process because decomposed plants and animals contain a lot of carbon and decomposing carbon also releases ^{CO2} and this is very important because living plants use carbon dioxide to photosynthesise and release oxygen which all living animals are dependent on.</i> This candidate has been credited maximum marks. They have identified a named element that is recycled and indicated that this is released by decomposition. The description of it being further used by living plants is sufficient to demonstrate an understanding of recycling. They complete their response by explaining why the plants take in the carbon dioxide by referencing its use in photosynthesis. Although this last marking point was seldom seen, where it was, this was usually associated with plants photosynthesising and only very occasionally with plants producing proteins.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
19	a	i	First check answer on answer line If answer = 0.9 %award 2 marks $\frac{200}{22000} \times 100 \checkmark$ = 0.9 ✓	2 (AO 2. × 2.2)	ALLOW 0.91 / 0.909 <u>Examiner's Comments</u> Candidates found this AO2.2 question quite challenging, often over-complicating it. Many performed incorrect divisions, and a few candidates rounded up to 1, then were only able to gain the mark for showing their working out.
		ii	Any two from: egestion ✓ excretion ✓ respiration ✓ decomposition ✓ uneaten parts ✓	2 (AO 2. × 1.1)	ALLOW faeces ALLOW undigested food ALLOW named excretory product / urine ALLOW heat IGNORE movement <u>Examiner's Comments</u> This recall AO1.1 question was generally answered well. Movement on its own did not score but some candidates correctly linked this to respiration and so gained the mark for respiration.

Mark Scheme

Question		Answer/Indicative content	Marks	Guidance
	b	Please refer to the marking instructions on page 4 of this mark scheme for guidance on how to mark this question. Level 3 (5–6 marks) Detailed explanation including conclusions about how the mechanism affects photosynthesis and links this to less biomass available to humans in the food chain. <i>There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated.</i> Level 2 (3–4 marks) Explanation of how the mechanism affects photosynthesis or affects the biomass available to humans. <i>There is a line of reasoning presented with some structure. The information presented is relevant and supported by some evidence.</i> Level 1 (1–2 marks) Demonstrates some knowledge of how the mechanism affects photosynthesis or affects the biomass available to humans. <i>There is an attempt at a logical structure with a line of reasoning. The information is in the most part relevant.</i> 0 marks <i>No response or no response worthy of credit.</i>	6 (AO 3. × 1.1) (AO 2. × 2.1) (AO 1. × 3.2b)	AO1.1 Demonstrate knowledge of photosynthesis and biomass. • Photosynthesis requires light energy • Mechanism reduces photosynthesis • Trapped by the leaves and used to produce food molecules • Photosynthesis required for plant growth • Plant biomass is a food source for animals including humans AO2.1 Apply knowledge and understanding of photosynthesis to the production of biomass • More light energy converted to heat, then less energy for photosynthesis • Less photosynthesis then plants can make less food / plants can grow less • Less plant biomass leads to less available food AO3.2b Draw conclusions linking photosynthesis to biomass in food chains • In low light intensities, light availability is the limiting factor • Less plant growth/crops therefore less food for cattle/less food for humans / in the food chain <u>Examiner's Comments</u> This Level of Response question assessed all three main assessment objectives. It was common to be limited to a low level mark due to repeating the stem of question regarding less biomass all through their response instead of linking the protection mechanism's impact to less light, less photosynthesis so less glucose/food made and consequently less food for cattle and humans. Candidates that did not appreciate that a reduction in light resulted in a reduction in photosynthesis, which also limited their answer to a low level.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
					There was little evidence of candidates planning their response. Taking time to consider how to answer a LoR, might encourage them to make notes and think through key areas. A common low level answer was to refer to the loss of energy due to the energy needed to switch on the mechanism. It was noted how many candidates did not link biomass to growth or production of food. However, those candidates that realised that the key to the answer was essentially linked to factors influencing photosynthesis, produced excellent responses. Exemplar 5 High light intensity levels cause the plant to absorb less light, reducing the amount of photosynthesis that takes place. This means the plant will not grow as much/as quickly so there is less crop ^{that grow}. As a result yield decreases so the mass of crop decreases. This means there is less food available for humans to consume. When the protection mechanism switches off slowly, there is a gradual increase in the amount of glucose the plant makes which slowly increases biomass available. However if it slowly increases the level of photosynthesis there is still less energy available for human consumption. This answer has less light/less photosynthesis and less crop and links this to the impact on the food chain so all Level 3, 6 marks This candidate has been credited Level 3 maximum 6 marks. They have structured their answer in a concise manner but included all the relevant marking points. The candidate describes the protection mechanism's impact in reducing light and photosynthesis. The candidate states that the decrease in mass of crops and food made means there is consequently less food for the humans to consume. They continue to give a reason why there will still be less energy available even when the plants resume photosynthesis due to the mechanism switching off slowly.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
	c	i	mRNA carries the code for proteins ✓ more protein will be made ✓	2 (AO 2 × 2.1)	ALLOW protein will be made faster <u>Examiner's Comments</u> This question assessed AO2.1. Many candidates were able to link mRNA to either more or faster protein synthesis, but very few referred to the term 'code' to link mRNA and protein synthesis.
		ii	First check answer on answer line If answer = 40 award 2 marks $\frac{20 \times 200}{100}$ ✓ = 40 ✓	2 (AO 2 × 2.2)	<u>Examiner's Comments</u> Candidates found this AO2.2 mathematics skills question quite challenging. 240 was a common incorrect response. Candidates need to have more practice at similar questions using percentages to develop their mathematical skills in this area.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
		iii	new method uses the plants own genes ✓ concern that plants with the insecticide/gene might be harmful to humans / might impact on food chains / might kill useful insects ✓	2 (AO 2.2) (AO3.2a)	ALLOW might have side-effects IGNORE ideas about cultural or religious or ethical objections or that it is playing God <u>Examiner's Comments</u> This question assesses both AO2 and AO3. Candidates were most likely to score a mark for the AO3 marking point, but it was rare for them to gain the AO2 mark. Many candidates described the effect of the gene on the plant, not consumers, or did not pick up on the possible problems of the insecticide itself. There were several responses written about the concern about genetic modification not being a natural process. This is an idea that mark schemes are unlikely to credit, preferring instead to focus on the effects of GM food on all consumers. Candidates also frequently missed out writing about the plants own genes and just focused on the AO3 marking point of the bacterial gene so missed the AO2 marking point. It was common for candidates to write about general dangers of bacteria and infections and not specifically the gene.
			Total	16	
20			B	1 (AO 1.1)	<u>Examiner's Comments</u> This question assessed knowledge and understanding of abiotic factors. Just over half of candidates did not achieve this mark and responded incorrectly with a named biotic factor.
			Total	1

Question			Answer/Indicative content	Marks	Guidance
24	a	i	feeds on seeds it is a primary (consumer) ✓ feeds on insects, then it is a secondary (consumer) ✓	2 (AO 2.1)	ALLOW eats seeds which are the producer/first trophic level ALLOW eats insects which are the primary consumer ALLOW it feeds on seeds and insects if no other marks scored. IGNORE references to herbivores/carnivores/predators <u>Examiner's Comments</u> This question was on application of knowledge and understanding of interdependence in food webs. Over half of all candidates were given at least one mark.
		ii	predator because it eats/kills pine martens ✓ competitor (with pine martens) because they eat flycatchers/same prey ✓	2 (AO 2.1)	ALLOW pine martens are foxes prey ALLOW foxes hunt pine martens ALLOW competitor because pine martens also eat flycatchers <u>Examiner's Comments</u> This question differentiated well on application of knowledge and understanding on interdependence. The main reason why the lower ability candidates did not score was due to them not identifying and stating the predator relationship and the competitor relationship.
		iii	insect(s) / Great tits	1 (AO 1.1)	<u>Examiner's Comments</u> This question was well answered by the candidates correctly identifying an organism in the second trophic level using their knowledge and understanding.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
	b	i	correctly chosen axes, labelled with units ✓ suitable scale for the number of bird boxes ✓ bars correctly drawn ✓ suitable key ✓	4 (AO 2.2)	height (m) must be on x-axis DO NOT ALLOW scale that use less than half the grid ALLOW +/- half a square IGNORE ?touching adjacent bars <u>Examiner's Comments</u> This was a good question which differentiated between the higher and lower ability candidates whereby they had to generate a bar chart from the information provided. Lower ability candidates struggled to choose the correct axis for the independent and dependant variable. A suitable scale and key were the highest marking points. Over a quarter of candidates were given full marks.  AfL Candidates should be encouraged to use the headings in a table to identify the independent and dependent variables. Convention is that the first column is most likely to be the independent variable. This should support them in choosing the correct axis, as the convention is that the independent variable goes on the x axis.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
		ii	Any three from: great tits (nest) higher (in the trees) / ORA ✓ this protects them from weasels who live mainly on the ground / ORA ✓ idea flycatchers (nest) at all heights ✓ as pine martens can move up and down/climb the tree ✓	3 (AO 3.2b)	ALLOW weasels can't reach them/great tits ALLOW fewer great tits lower down as weasels eat them = 2 ALLOW flycatchers can get killed anywhere in tree by pine marten IGNORE pine martens eat flycatchers and live in the trees <u>Examiner's Comments</u> Lower ability candidates could not analyse the information and draw conclusions. A number of candidates did not interpret the data correctly. Some compared the great tits with the flycatchers instead of identifying the predator prey relationship they had with the weasels or pine martens to explain the number of nests at different heights. A lot of candidates just stated that pine martens live in a tree, which is in the stem of the question.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
25	a			2 (AO 1.1)	ALLOW numbers matched to correct boxes All 4 lines correct = 2 marks 2 or 3 lines correct = 1 mark 1 or 0 lines correct = 0 mark <u>Examiner's Comments</u> This question differentiated well, and many candidates were able to demonstrate their knowledge and understanding of the carbon cycle.
	b	i	(no) microorganisms (in the soil) ✓ no decay (takes place) ✓	2 (AO 1.1) (AO 2.1)	AW microbes, decomposers, saprophytes, detritivores, bacteria, fungi AW decomposition, rotting, break down ALLOW not enough nitrifying bacteria to replace nitrates / no nitrates released by nitrifying bacteria = 2 IGNORE no organisms to recycle the minerals <u>Examiner's Comments</u> Very few candidates were able to apply their knowledge of microbes and decay to this question, and found it challenging to answer. Many candidates misinterpreted the question and talked about lack of oxygen for life or that Mars is too dry for life. This is demonstrated with Exemplar 4 which was given 0 marks. Exemplar 4 <i>The conditions are different. It is really hot on mars so the soil would dry out.</i> [2]

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
		ii	plants release oxygen by photosynthesis ✓ organisms in the soil / microbes / animals release carbon dioxide by respiration ✓	2 (AO 2.2)	ALLOW correct word (or symbol) equations for photosynthesis linked to plants and respiration linked to organisms in the soil / microbes / animals AW microbes, decomposers, saprophytes IGNORE breathe out carbon dioxide IGNORE plants will respire and give out carbon dioxide ALLOW 1 mark for plants release oxygen/photosynthesis and microbes give out carbon dioxide/respire if no other marks are awarded. <u>Examiner's Comments</u> Candidates had to apply their knowledge and understanding of gases given off by plants in photosynthesis and organisms in carrying out respiration to explain why air would no longer needed to be added after a while. Most non-scoring responses were too vague and just stated gases as in the stem of the question.
			Total	6	
26			B	1 (AO 1.2)	
			Total	1	
27			B	1 (AO 1.1)	<u>Examiner's Comments</u> This AO1.1 question testing recall of mechanisms of energy losses in food chains, showed a clear area of misconception. In general, candidates chose either B or a significant number frequently put C and did not score.  Misconception Many candidates are unaware of the distinction between egestion and excretion.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
28	a	i	feeds on seeds it is a primary (consumer) ✓ feeds on insects, then it is a secondary (consumer) ✓	2 (AO 2.1)	ALLOW eats seeds which are the producer/first trophic level ALLOW eats insects which are the primary consumer ALLOW it feeds on seeds and insects if no other marks scored. IGNORE references to herbivores/carnivores/predators <u>Examiner's Comments</u> This AO2.1 question was generally well answered by most candidates. Some candidates did not match the appropriate terminology to the seed and insect correctly and did not score. Misconception A small number of candidates have the misconception that a secondary consumer refers to the number of steps away from the producer and wrote that the great tit was a secondary consumer of leaves.
		ii	predator because it eats/kills pine martens ✓ competitor (with pine martens) because they eat flycatchers/same prey ✓	2 (AO 2.1)	ALLOW pine martens are foxes prey ALLOW foxes hunt pine martens ALLOW competitor because pine martens also eat flycatchers <u>Examiner's Comments</u> Generally, candidates coped well with this AO2.1 question. A small number of candidates did not link the animal to the term and simply said foxes eat pine martens and flycatchers, but generally most understood the terms and used them correctly in the context of the food web.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
		iii	insect(s) / Great tits	1 (AO 1.1)	<u>Examiner's Comments</u> Almost all candidates scored on this AO1.1 question. On the rare occasion that an incorrect response was given it was for flycatcher.
	b	i	correctly chosen axes, labelled with units ✓ suitable scale for the number of bird boxes ✓ bars correctly drawn ✓ suitable key ✓	4 (AO 2.2)	height (m) must be on x-axis DO NOT ALLOW scale that use less than half the grid ALLOW +/- half a square IGNORE ?touching adjacent bars <u>Examiner's Comments</u> This AO2.2 question testing graphing skills was generally well answered. The majority of candidates drew a good chart with suitable scales and a key. A small but significant number did not label the axes with units  AfL Candidates, particularly those of lower ability, need practice at drawing graphs and representing information in ways that have strict rules about using rulers, the size of graphs and bars. This will maximise their opportunity to get full marks on questions like this one.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
		ii	Any three from: great tits (nest) higher (in the trees) / ORA ✓ this protects them from weasels who live mainly on the ground / ORA ✓ idea flycatchers (nest) at all heights ✓ as pine martens can move up and down/climb the tree ✓	3 (AO 3.2b)	ALLOW weasels can't reach them/great tits ALLOW fewer great tits lower down as weasels eat them = 2 ALLOW flycatchers can get killed anywhere in tree by pine marten IGNORE pine martens eat flycatchers and live in the trees <u>Examiner's Comments</u> Most candidates were able to link the preference for height of box in great tits to protection from a ground-dwelling predator in this AO3.2b question analysing information and ideas to draw conclusions. Although many candidates could link the location of the great tits due to the weasel predator being on the ground, only a few candidates were able to explain the results for the flycatchers.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
29	a			2 (AO 1.1)	ALLOW numbers matched to correct boxes All 4 lines correct = 2 marks 2 or 3 lines correct = 1 mark 1 or 0 lines correct = 0 mark <u>Examiner's Comments</u> Most candidates scored on this AO1.1. On the rare occasion where candidates made an error it was usually on photosynthesis or respiration.
	b	i	(no) microorganisms (in the soil) ✓ no decay (takes place) ✓	2 (AO 1.1) (AO 2.1)	AW microbes, decomposers, saprophytes, detritivores, bacteria, fungi AW decomposition, rotting, break down ALLOW not enough nitrifying bacteria to replace nitrates / no nitrates released by nitrifying bacteria = 2 IGNORE no organisms to recycle the minerals <u>Examiner's Comments</u> Lower ability candidates didn't realise they needed to identify decomposer or a named type of decomposer and instead repeated the term living organisms from the question, thereby missing the AO1.1 aspect of the question. Higher ability candidates were able to name decomposers or types of decomposers. A significant number did not write about the AO2.1 aspect of the question about decomposition, using terms such as replenish or recycle minerals. Some candidates wrote about the minerals being used up but didn't go on to say why they would not be replaced.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
		ii	plants release oxygen by photosynthesis ✓ organisms in the soil / microbes / animals release carbon dioxide by respiration ✓	2 (AO 2.2)	ALLOW correct word (or symbol) equations for photosynthesis linked to plants and respiration linked to organisms in the soil / microbes / animals AW microbes, decomposers, saprophytes IGNORE breathe out carbon dioxide IGNORE plants will respire and give out carbon dioxide ALLOW 1 mark for plants release oxygen/photosynthesis and microbes give out carbon dioxide/respire if no other marks are awarded. <u>Examiner's Comments</u> In this AO2.1 question, many candidates referred to plants only, indicating the importance of careful reading of the question that asked about organisms other than plants. Another frequent response from candidates that did not score was reference to 'breathing' out carbon dioxide and not specifically to respiration.
			Total	6	

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
30	a		(the salt) will draw water out of the plant cells by osmosis ✓	1 (AO 2.1)	ALLOW plant cells will lose water and become plasmolysed IGNORE flaccid / dries the plant out <u>Examiner's Comments</u> On this AO2.1 question, even higher ability candidates found it challenging. Quite a few understood that water would be lost but did not mention osmosis or refer to the cells being plasmolysed. Many responses considered cell turgidity and possible lysis. Some even thought salt water was beneficial for providing the cells with minerals.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
	b	i	FIRST CHECK ANSWER ON THE ANSWER LINE If answer = 0.1 (%) award 3 marks = 2.5 ✓ $\frac{2.5}{2500} \times 100$ ✓ = 0.1 (%) ✓	3 (AO 1.2) (AO 2.2) (AO 1.2)	ALLOW ECF on area of quadrats ALLOW ECF Examiner's Comments This AO1.2 and AO2.2 question was generally answered well. Some candidates incorrectly rounded their answer and others did not multiply the area of 1 quadrat by 10, therefore using 0.25 instead of 2.5 in their calculation. Very few candidates scored zero, as often candidates were able to get marks for error carried forward. This emphasises the importance of candidates showing their working out. Exemplar 2 $50 \times 50 = 2500$ $0.5 \times 0.5 = 0.25$ $\frac{0.25}{2500} \times 100 = 0.01$ Percentage = 0.01 % [3]  AfL In this exemplar, it shows how ECF was applied to incorrect responses. ECF was applied to the percentage calculation method with incorrect value for the area of the quadrats, then ECF for the percentage calculation value. This highlights how important it is for candidates to show their working out as the candidate would not have scored any marks if all they had put was 0.01 on the answer line, as it would not have been possible to apply ECF.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
		ii	Any three from: the second student samples less area / ORA ✓ the second student did not sample at random / only sampled in the centre of the marsh / ORA ✓ the centre may contain different plants compared to the edges ✓ so, idea that the second student's results may be less representative / less accurate / ORA ✓	3 (AO 3.1b)	ASSUME SECOND SAMPLE IF NOT STATED ALLOW only 5 quadrats taken / less repeats / less sample size / less data collected ALLOW the second student will not have results from all over the marsh / ORA <u>Examiner's Comments</u> The majority of candidates gained some marks on this AO3.1b question, with a minority gaining maximum marks. Most candidates were able to recognise that second student's method was not random and not representative of the entire marsh. Fewer commented on the fact that 5 quadrats cover less area than 10. Very few candidates observed that the plants would probably be different in different areas of the marsh. AfL Candidates should be prepared to evaluate by processing information, graphs and diagrams before attempting answers, as this will help them construct responses that will cover the marks available in the question.

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
		iii	make sure the tide is not coming in / make sure that the marsh is stable enough / wash hands after the experiment ✓	1 (AO 3.3b)	ALLOW be aware of tide timetables/high tides ALLOW be safe as the tide is unpredictable ALLOW avoid falling into deeper marsh/slipping in mud IGNORE references to clothing <u>Examiner's Comments</u> This AO3.3 question targeted practical skills and specifically improvement of experimental procedures. Many candidates misunderstood 'risk assessment' and suggested things that could go wrong with experiment; 'losing the quadrats', 'damaging or killing plants/animals', etc. rather than health and safety.
	c		salt marshes are rare habitats ✓ they contain plants that do not live anywhere else ✓	2 (AO 3.2b)	ALLOW salt marsh plants are rare ALLOW plants can be lost / extinct ALLOW loss of habitat for the animals that live there <u>Examiner's Comments</u> This AO3.2b question required suitable conclusions to be drawn from the evidence in the question. Many candidates realised a marsh is a rare environment and that plants that grow there would be lost if the sand banks were built. As the question mentions increased biodiversity, lower ability candidates incorrectly considered other, more general reasons linked to the sand banks, with a frequent response being 'it would cause flooding' or that 'it would be expensive'.
